Price 10 cents

Monthly Indexes of Retail Sales in Canada, June, 1942  
(1935-1939 = 100)

Retail sales in Canada, as measured by dollar volume, averaged 15 per cent higher in June of this year than last and were 41 per cent higher than in June of 1939, according to indexes of sales computed from sales figures reported by a sample number of retail firms representing 12 different retail trades. The 15 per cent increase over June, 1941, exceeds the May increase which stood at 12 per cent but it was lower than the 17 per cent gain recorded in the cumulative totals for the first half of this year compared with last. The general index of sales, unadjusted for seasonal variations, stands at 154.3 for June, 1942; 159.4 for May, 1942; and 133.9 for June, 1941.

Marked increases in the three lines of business included in the index and dealing chiefly in food products constitutes an outstanding feature in the June figures. Candy store sales were up 24 per cent compared with June last year while grocery and meat store sales and restaurant receipts each gained 21 per cent. These increases exceeded by narrow margins the average gains for the same trades for the year to date which stand at 21 per cent for candy stores, 20 per cent for grocery and meat stores and 20 per cent for restaurants and other eating places. The occurrence of one more business day in June of this year compared with last, new taxes on candy introduced in the June budget and the announcement of the coupon rationing of sugar to begin on July 1st may be quoted as factors to be considered in relation to the trend in business of these trades.

Dollar volume of sales for stores specializing in furniture were unchanged in June of this year compared with last and were practically unchanged for the year to date. Dollar sales for stores specializing in radios or electrical appliances were 7 per cent lower in this year than last and were down by 2 per cent in the cumulative totals. All other lines of business for which indexes of sales are computed reported increases in June of this year over last smaller than those already mentioned for food stores and, excepting only women's apparel stores, smaller than the average gains as shown in the results for the first six months of this year compared with last. Sales of women's specialty stores were up by 20 per cent, both in the June comparison and also in the six-month totals, while June increases for other trades with six-month cumulative percentage gains in brackets are as follows: shoe stores, 14 per cent (23 per cent); men's clothing or furnishings stores, 10 per cent (27 per cent); department stores, 12 per cent (15 per cent); drug stores, 13 per cent (15 per cent); hardware stores, 7 per cent (14 per cent); and variety stores, 17 per cent (21 per cent).

There was one more business day in June of this year than last. On making allowance for this factor and also for normal seasonal movements, the adjusted general index of retail sales advanced slightly from 149.1 in May to 150.7 in June. That is to say, the underlying level of retail trading as measured in dollar volume was approximately 51 per cent higher in June, 1942, than the average for the base period extending over the five years from 1935 to 1939. The increase in the seasonally adjusted

general index was due largely to an increase in the grocery and meat group whose seasonally adjusted index advanced from 157.1 in May to 172.6 for June. Seasonally adjusted indexes for four other trades were up slightly; the furniture index remained unchanged while substantial declines were recorded for shoe stores and for both men's and women's specialty stores.

The change in dollar value of sales between any two periods represents the net resultant of two factors: changes in the quantities of goods purchased and differences in price levels. Thus the changes in the indexes of retail sales shown in this report do not reflect changes in the quantity of goods purchased since no allowance has been made for price increases. The Bureau's Retail Price Index for June, 1942, stood 21.8 per cent above the base period, 1935-1939, and was 8 per cent higher than in June, 1941. Although these price indexes are not strictly comparable with the retail sales series, they serve to give some indication of the extent to which changes in retail prices account for the increase in retail trading.

Indexes of jewellery store sales are not computed but percentage changes in sales for this trade based on aggregate sales figures reported by a sample number of firms reveal a marked increase of 34 per cent in June of this year over last. Part of this increase may be attributed to higher retail selling prices following the 25 per cent tax on retail prices of jewellery introduced in the June budget.

Sales of 17 departmental firms which reported June sales by departments averaged 12 per cent higher than in June, 1941. A decrease of 5 per cent occurred in sales of household appliances and electrical supplies, but increases were recorded for all other departments. Furniture sales were up 5 per cent, hardware sales gained 7 per cent and home furnishings, 12 per cent, while radios and musical instruments gained 17 per cent in the same comparison. Sales of women's clothing were 16 per cent higher while men's clothing departments reported improvement of 14 per cent over June a year ago. Footwear sales were 3 per cent greater than in June last year. Sales of food departments averaged 18 per cent higher.

Comparison of Retail Sales in Canada, for 1941 and 1942, by Kinds of Business  
 (Comparisons are based on dollar value. No corrections have been made for higher prices)
