## Wontriy Indaxes of Retail Sales in Canada. September, 1945 $(1935-1939=100)$

Retatl sulas fin Cuada were 5 per cent higher in September of this year than last and were also 5 per cent higher than the dollar volume of business transacted in August, 1945 according to results of the monthly survey of retail trade made by the Dominion Bureau of Statistics. The general index of retail salos (representing the everage experience of 14 trades), and on the base, 1935-1939=100, stands at 187. 2 for sptember, 1945 compared with 178.1 for August of this year and 178.1 for September a year $4 \sigma^{2}$

The 5 per cent grin over September, 1944 is considerably below the more sube stantial increases of between 10 and 11 per cent recorded in the comparisons between dune, July and August of this year and last. Most of this reduction in percentage tacrease may be attributed to the fact that there was one more business day in september of last year than this. On making allowance for differences in the number of business days and also for normal seasonal movements the adjusted index of sales stands at 186.1 for September, 9 per cent above the index for the corrosponding wonth if last year but down slightly from the August, 1945 index of 189.8.

Ithereases of 19 per cent for men's specialty shops and 17 per cent for hardware stoves constitute the two outstanding gains in the comparison between September of this year and last on an individual trade basis. The marked gain for men's cloth ing shops indicates that the effect of purchases by service men is now being felt to ai. appreciable degree. The 17 per cent increase for hardware stores is in continua. tron of substantial mains recorded in the three preceding months and reflects improve raxt lia tha supply $\begin{gathered}\text { it } \\ \text { ithte on with respoct to this trade。 }\end{gathered}$

A slight decline of 1 per cent in food store sales below September last year may be attiluted in part th the re introduction of meat rationing in September of this year. The occurrence of the extra shopping day in September of last year comgared with this is another factor to which consideration should be given in inter* proting this decrease.
nountry general store salos averaged 4 per cent higher in September of this yenr than last compared with increases of from 7 to 8 per cent which characterized the corresponding comparisons with last year for the three preceding months. Lifting of gas rationing in August enabling the rural population to do their shopping further afield together with somewhat lower farm revenues in September of this year compared with last may be mentioned as factors tending to reduce the volume of business transaciod by country gmeral svocso.

Department store sales were 10 per cent higher in Septembar of this year than last and were up 30 per cent compared with August. That the gain over September, 1944 for department stores exceeded the average 5 per cent gain for retail trade as a whole may be attributed to the fact that department store sales are heavily weighted by such comodities as wearing apparel and househoid effects, commodities whose sales have been active during resert montis.

Increases of 10 per cent for furnathe storsi and 22 par eant for stores specializing in racios and electrical equipment compared with September, 1944 reflect active demand and the improving supply situation with respect to the comodities in which these stores specialize. Gains over September last year for other trades for which figures are compiled are as follows, retail furriers, 14 per cent; family clothing stores, 9 per cent; women's clothing stores, 6 per cent; shoe stores, 4 per cent; restaurants, 6 per cent; jewellery stores, 9 per cent; drug stores, 4 per cent and variety stores, 1 per cent. Candy store sales, as measured by sales reports received from chain companies active in this field, were ll per cent lower in September of this year than last.

## Regional Trends

Sales indexes, when computed on a regional besis indioate that increases in sales in September over the corresponding month a year ago were somowhat higher in Western Canada than in the central and eastern parts. Sales in British Columbia were up by 8 per cent followed by the Prairie Provinces with a gain of 7 per cent. Relatively slight gains ranging around 4 per cont were recorded in Ontario, Quebec and the Maritime Provinces.

## Department.ol Analysis of Department Store Sales

Aggragate sales of those firms which provided a breakdown of sales by departments were 11 per cent higher in September of this year over last. Largest pains were those for hardware and furniture, whose sales increased 20 and 17 per cent respectively. Other departments whose sales increases exceeded the average gain were men's wear, home furnishings and household appliances. A decrease is shown in food sales in September this year below 1944.

On Page 11 of this report a summary of department store sales by departments for the first nine months of this year and last is given. While furniture and hardware departments recorded gains of 15 per cent over the corresponding period of 1944, most other departments showed increases which varied little from the 10 per cent average gains for all departments. The radio and music department was the only exception, with a minor increase of 5 per cent in the cumulative results.

Comparison of Retail Sales in Canada, for 1944 and 1945, by Kinds of Business (Comparisons are based on dollar value. No corrections have boen made for higher prices)
