RETAIL SALES IN CANADA, APRIL, 1937
(Indexes of Value)

formerly

CHANGES IN THE VALUE OF RETAIL SALES

The gradual upswing in Canadian retail trade continued throughout April. The dollar value of retail sales was 7.9 per cent above March and 8.5 per cent above April last year, according to index numbers compiled by the Dominion Bureau of Statistics. On the basis of the average for 1930 as 100, the unadjusted general index number was 79.2 for April, 73.4 for March and 73.0 for April, 1936.

When corrections for differences in the number of business days and for normal seasonal variations were made, the general index stood at 78.3 for April compared with 75.3 for March. With the single exception of December, 1936, retail trade was thus at a higher level during April than during any month since 1931.

The value of sales of the various sub-groups showed a mixed trend compared with last April, according to the unadjusted index numbers, with eight groups advancing and five groups receding. Anticipation of Coronation broadcasts resulted in heavy buying of radios, sales figures advancing 37.9 per cent compared with last April. Hardware store sales gained 21.6 per cent and the grocery and meat and furniture groups each advanced 14.5 per cent. Restaurant sales increased 9.1 per cent, departmental store sales, 6.9 per cent, and drug store sales, 5.0 per cent. The men's clothing group showed an improvement of 1.1 per cent while sales of women's clothing declined 4.2 per cent. Variety store sales receded 0.5 per cent; boot and shoe sales, 2.3 per cent; and receipts of dyeing and cleaning establishments, 14.0 per cent. April candy sales declined 43.2 per cent below April, 1936. This decrease may be attributed to the changing date of Easter, the holiday trade being concentrated in March this year and in April a year ago.

This report presents on page 5 the new series of index numbers of hardware store sales based on the combined figures of 13 chains of hardware stores and 83 hardware firms operating one store only. The three series of index numbers, the unadjusted, the series corrected for number of business days and the third adjusted for number of business days and for normal seasonal variations are shown by months from January, 1929, to date. On page 6 are shown the indexes of seasonal variation or the seasonal correction factors for the various months. This new series brings out that the proportion of annual business transacted during the months of January and February has been gradually decreasing since 1929, while there has been a corresponding increase in buying activity during the months of July and September of the last nine years.

The seasonal correction factors used in the calculations of the new series of furniture store sales recently published also appear on page 6 of this report.

This report is based upon monthly returns secured from a representative number of department stores, chain store companies and a number of independent firms in those lines of business where chains are of minor importance.

Analysis of Departmental Store Sales for March—The analysis of department store sales for the months of March, 1936 and March, 1937, shows improvement over last year for every department outlined and an advance of 12.0 per cent for department store sales as a whole. The early occurrence of Easter in 1937 resulted in a sharp upswing of sales of wearing apparel. The men's and boys' clothing group showed a gain of 13.9 per cent. The women's and children's departments gained 12.8 per cent over last year, millinery sales alone advancing 28.4 per cent. A sharp rise was reported in both furniture and household appliance sales, the former gaining 34.7 per cent and the latter 20.1 per cent. Another important advance was that for stationery, book and magazine sales, which was 19.7 per cent. Since a few stores, which contribute total sales figures for use in the calculation of the departmental store index number, are unable to give a breakdown of sales by departments, it will be understood that the percentage change in total value of departmental store sales as shown on page 6 will vary slightly from the percentage change indicated by the unadjusted index numbers appearing in the regular series.
