CENSUS OF MERCHANDISING AND SERVICE ESTABLISHMENTS.
Retail Chains in Canada, 1935
The positicn of the corporate chain in relation to the total retail trade of the country remained unchanged in 1935 compared with the preceding year, according to the results of the annual Census of Merchandising and Service Establishments. There were 445 different chain store companies in Canada in 1935 and, together, these operated a total of 8,022 individual units. Total chain sales for the year were $\$ 364,129,800$ or 17.9 per cent of the total retail trade, the proportion of chain to total sales remalning unchanged frum the preceding year, when 445 chain companies operated 8,210 stores with $\$ 347,186,100$ sales. Although the number of chain firms did not vary over the two-year period, their identity was not the same. Thirty-two firms, included jn the chain count for 1934, either went out of business in that year or else reduced the number of their stores below the four-store limit necessary for inclusion in the chain store category and were, therefore, mitted from the 1935 figures. This decrease was offset by the introduction of 32 new firms, either through the formation of new companies or the expansion of two- or three-store multiples to full-fledged chains.

The 4.5 chains operating in 1935 required the services of 30,449 male and 14,920 femal? employees, to whom $\$ 36,382,000$ were paid in salaries and wages. These figures relate to store employoos only; head office and warehouse employees and payroll are not included. Stocks on hand at the end of 1935 totalied $\$ 55,062,100$, of which goods carried in the stores were valued at $\$ 42,796,200$ and warehouse stocks at $\$ 12,265,900$. Customers accounts ousstanding on the ooks of retail chains at the end of 1935 were valued at $\$ 30,471,100$ 。

In addition to the 445 corporate chain companies, there were 37 voluntary chains or groups of independent retailers grouped for buying and or advertising purposes. These groups were comprised of approximately 7,300 indiviuual members and, although the amount of business these transacted is not known, infomation was secured to show that purchases at wholesale prices from the affiliated wholesale companies totalled $\$ 31,053,-$ 633.

Scope of Report.--Information covering the operations of ohains within each province is to ke found in the provincial reports on retail trade which have already been published. In addition, a special report, "Food Chains in Canada, $1935^{\prime \prime}$, has also been issued. The present report provides a sumnary of the activities of retail chains in canada during 1935 together with comparative figures for earlier years, but it does not give all the detail shown in the provincial reports nor does it give the details regarding food chains to be found in the special report already mentioned. The firms whose activities are summarized here include all organizations operating four or more retail units, exclusive only of department stores. Voluntary chains, in which the various stores are individually owned and operated but which are grouped for buying and/or advertising purposes, are not included with the company chains. A brief reference to these voluntary chains is made in a separate section of this report.

Variations in Chein Ratios by Rinds of Business.--Ratio of chain sales to total sales for most individual lines of business as well as for the total retail trade as a whole remained practically unchanged in 1935 from the preceding year. The only important change was for filling
statipns, in which industry the transition of an increasing number of units formerly operated directly by the large gasoline companies to the leased station type resulted in a reduction in the ratio of chain to total sales fran 30.5 per cent in 1934 to 25.3 per cent in 1935. A substantial reduction in the number of units of furniture store chains resulted in a decrease in the ratio of chain sales to total for this classification from 19.2 per cent in 1934 to 15.6 per cent in 1935 .

Comparison of chain ratios for 1935 and 1930 for those lines of business in which chains are of most importance reveals the differences shown below:

## Kind of Business

Chain Ratio

| Kind of Business | $\frac{\frac{\text { Cha }}{930}}{\%}$ | $\frac{\frac{a t i o}{1935}}{\%}$ | Change |
| :---: | :---: | :---: | :---: |
| Shoe stores | 21.5 | 30.8 |  |
| Grocery and combination stores | 29.5 | 32.5 | +3.0 |
| Filling stations | 22.4 | 25.3 | +2.9 |
| Lumber and building material dealers | 28.1 | 30.3 | + 2.2 |
| Hardware stores | 6.0 | 7.7 | $+1.7$ |
| Drug stores . ${ }_{\text {Candy }}$ | 18.2 | 19.8 | $+1.6$ |
| Variety stores | 10.1 | 10.8 | + . 2 |
| Tobacco stores and stands |  | 89.4 24.8 |  |
| Office, school and store supplies and equipment | 56.1 | 24.8 | - 6 |
| Men's and boys' clothing and furnishings stores (including custom tailors) |  | 54.4 | - 1. |
| Fish and meat markets |  | 11.9 | - 1. |
| Women's apparel and accessories stores | 12.3 | 10.3 | - 2.0 |
| Restaurants and eating places | 17.7 | 14.4 | - 3.3 |
| Furniture stores | 22.8 | 15.6 | - 7.2 |
| Radio and music stores | 21.0 | 11.3 | - 9.7 |

Variations in Chain Ratios by Provinces.--Slight increases in chain ratios in 1935 over 1934 were recorded in five provinces and slight decreases in four. In comparison with 1930, increases in 1935 were recorded in six provinces and decreases in three. A comparison of the chain ratios for the several provinces for 1930 and 1935 reveals the changes shown below:

Province
Chain Ratio

Summary by Kinds of Business.--The 445 chain companies operating in 1935 included 75 grocery or combination store chains with 2,151 stores and $\$ 101,418,400$ sales. In addition, there were 13 meat market chains with 158 stores and $\$ 4,217,500$ sales. Including grocery and combination stores and meat markets, chain sales totalled $\$ 105,635,900$ or 28.5 per cent of the total business of all such stores, inciuding both chains and independents. Twenty-nine drug store chains operated a total of 311 unit stores with sales amounting to $\$ 12,164,100$ or 19.8 per cent of total drug store sales. There were 38 dealers in lumber and building materials, each of which operated four or more retail yards and are, there fore, included in this chain swnmary. These 38 companies operated 828 yards with $\$ 11,197,000$ sales. Variety store chains numbered 14 and these operated 390 stores with $\$ 37,914,000$ sales. Summary statistics showing the number of chains, chain stores and sales, together with the ratios of chain to total sales, are given in Table 2 , first, for all retail trade as a whole and then for those lines of business in which chains are of considerable importance.

Chain Store Gross Margins.--The term "gross margin" is used

- here to represent the amount remaining after deducting the net cost of goods sold from net sales. The net cost of goods sold is calculated from the net cost of goods purchased during the year and from the inventory
- values at the beginning and close of the period. The net cost of goods purchased includes the invoice value less all returns, allowances and discounts, plus inward freight, cartage to warehouse, duty, insurance in transit, and other expenses incidental to receipt of merchandise. Warehousing charges and costs of transportation from warehouses to stores are not included in the purchase price and all operating expenses of the stores are, of course, excluded. Transportation costs of goods shipped directly from wholesalers, manufacturers or factory to the retail stores were to be included in the value of purchases.

Most of the larger chain store companies, in addition to performing the duties of retailers, carry on the functions of wholesalers in so far as the physical handling of merchandise is concerned. A number of chain companies also indicated that their warehouses carried on a slight amount of wholesale business with other retailers in addition to supplying their own stores. The gross margin figures shown herein are calculated from the difference between the total value of purchases and total sales, including any wholesale sales in addition to store transactions. These figures, therefore, represent the gross profit applicable to the chains' retailing and wholesaling functions combined.

Manufacturer-controlled chains are operated primarily to distribute the products of the manufacturing plants of the parent company. In most cases, data regarding laid down cost of merchandise at the retail branches were not available so that figures for such kind-of-business classifications as household appliance stores and office appliance stores which are operated largely by manufacturing plants are omitted from the tables giving gross margin figures. Many of the candy and confectionery chains indicated that they manufactured the goods which were sold by their branches and figures for these also have been excluded from the tables.

## Gross Margins for Selected Kinds of Business

Grocery Chains.--Gross margin for grocery chains formed 15.98 per cent of net sales in 1935 compared with 17.57 per cent in 1934. An exact comparison of these ratios is not valid, however, on account of the reclassification of some firms in the two years as between grocery chains and combination store chains. An analysis of gross margins of grocery chains will be found in the special report, "Food Chains in Canada, 1935". from which it will be seen that gross margin percentage of net sales increases as the size of chain increases.

Combination Store Chains.--Combination store chains operate stores part of which are usually purely grocery units while others sell both groceries and fresh meats. Gross margin for combination store chains as a whole formed 19.99 per cent of net sales in 1935 compared with 19.38 per cent in 1934. A special analysis of combination store chains is also contained in the special report on food chains referred to above.

Meat Market Chains.--Gross margin for meat market chains aver aged 23.58 per cent of net sales in 1935 compared with 23.90 per cent in 1934.

Variety Store Chains.--Variety store chain gross margin averaged 36.34 per cent of net sales in 1935 compared with 36.62 per cent in 1934. In Table 8 the variety store chains operating in 1935 are classified according to size, first, on the basis of number of stores and, second, according to amount of annual sales. The ratio of gross margin to total sales is given in each case and it will be noted that the ratio varies directly as the size of chain.

Apparel Group.--Gross margin for men's and boys clothing and furnishings store chains averaged 32.41 per cent of net sales in 1935 compared with 32.31 per cent in 1934. Gross margin percentage of net sales is slightly lower in the case of women's apparel and accessories than for
men's clothing and furnishings, averaging 31.57 per cent of net sales in 1935 and 30.22 per cent in 1934 .

The 24 shoe store chains had average gross margin of 30.03 per cent of net sales in 1935 compared with 28.10 per cent in 1934 . Shoe store

- chains are classified according to size in Table 9 and it is seen that gross margin varied from 25.48 per cent for a group of six companies each having between 6 and 10 stores to 31.94 per cent for three chains each with more than 25 branches. When classified according to total annual business, gross margin varied from 27.25 per cent for 15 chains each with less than $\$ 250,000$ sales to 31.14 per cent for four chains each doing more than half a million dollars worth of business.

## Lumber and Building Materials Dealers.--While differing in many

 respects from the ordinary chain store system, lumber and building materials dealers are olassified as chains for the Census of Merchandising if they operate four or more retail yards. Gross margin for all lumber and building materials dealer chains averaged 206.48 per cent of net sales in 1935 compared with 25.60 per cent in 1934. In Table 10 these chains are classified according to size both on the basis of the number of yards operated and also according to total annual sales. When classified according to number of yards, gross margin is shown to form 23.19 per cent of sales for a group of six companies each with fewer than six yards and it appears to remain relatively constant ai approximately 27 per cent for each of the other size groups. When classified according to total sales, the smaller organizations are again found to operate on the smallest gross margin. These results are somewhat at variance with those shown in the corresponding reports last year where the gross margin percentage was higher for the smaller than the larger firms. Before constructing the tables for 1935, all data relating to gross margin for lumber and building materials dealer chains were verified so that the figures given here are as accurate as it is possible to make them by means of a postal canvass.Drug Store Chains. --There were 29 drug store chains in Canada in 1935 and these operated 307 stores with $\$ 12,164,100$ sales. Gross margin for drug chains averaged 31.48 per cent of sales in 1935 compared with 31.54 per cent in 1934. Drug chains are classified according to size of business in Table 11 and the gross margin applicable to each size class is shown.

## Voluntary Chains

According to the information available, there were 37 voluntary chains in Canada in 1935 and these included approximately 7,300 individual members. No information is available to show the value of sales for these chains but, according to reports received, primarily from affiliated wholesale campanies, purchases at wholesale prices by members amounted to $\$ 31,053,633$ in 1935. Exact data on the extent of the voluntary chain system in canada are difficult to obtain. A considerable number of wholesale firms which formerly indicated that they were associated with these buying groups now state that they offer the same terms to all their clients. on the other hand, there may be many groups of retail merchants who do some buying on a co-operative basis but which are not recognized or known as voluntary chains.

Voluntary chains continue to function primarily in the grocery field. Of the 37 chains in 1935 for which figures are available, 29 were associated with wholesale grocers. These 29 groups were comprised of 6,465 individual members and purchases at wholesale prices totalled $\$ 27,-$ 525,349 . A summary of the information available relating to the activities of voluntary chains is presented in Table 12.
(Number of Chains, Stores, Personnel, Payroll, Sales, Stocks and Accounts Outstanding)

(1) Group totals may include figures for classifications which cannot be shown separately without disclosing individual operations.
(2) In computing the percentages in this column, the sales of Government liquor stores have been omitted from the total chain figures.
(3) Exclusive of manufacturing bakeries.
(4) According to revisions received since the main body of this report was compiled, the sales for gasoline filling station chains should be increased by approximately $\$ 500,000$.
