INTRODUCTION

This report contains data on the total value of construction put in place during 1973-1975 and on intended construction expenditures for 1976. The information presented for 1975 is preliminary whereas that shown for 1974 and earlier years is final.

For the larger part the contents of *Construction in Canada* are based on the Statistics Canada capital expenditure survey. From the same source an earlier report *Private and Public Investment in Canada, Outlook 1976* is published. *Private and Public Investment* reports the total capital outlays program including machinery and equipment, whereas *Construction in Canada* emphasizes the construction activity and reports a further detail of construction performed by 70 different types of structure. Additionally, statistics on labour and materials input are supplied based on the Statistics Canada contractor survey, and on the censuses of mechanical and electrical trade contractors, and highway, road, bridge, residential and non-residential general contractors.

Ce bulletin contient des renseignements sur la valeur totale des travaux de construction exécutés au cours des années 1973-1975, et sur le montant des travaux projeté pour 1976. Les données sur 1975 sont provisoires; les chiffres sur 1974 et les années antérieures sont définitifs.

La plupart des renseignements publiés ici ont été recueillis dans le cadre de l'enquête sur les investissements de Statistique Canada. Le bulletin *Investissements privés et publics au Canada, perspectives de 1976* est tiré de la même enquête; il porte sur la valeur totale des immobilisations, y compris les machines et l'outillage, tandis que *La construction au Canada* met l'accent sur l'activité de l'industrie de la construction et donne plus de détails sur les travaux de construction exécutés, selon le genre de construction (on en distingue environ 70). Cette publication contient de plus des données supplémentaires sur la main-d'œuvre et les matériaux utilisés; ces données sont tirées d'enquêtes que Statistique Canada mène auprès des entrepreneurs et de recensements effectués auprès de certains entrepreneurs spécialisés dans les domaines de la mécanique et de l'électricité et d'entrepreneurs généraux dans les travaux de grandes routes, rues, chemins et ponts, et de bâtiments résidentiels et non résidentiels.

DEFINITIONS

Construction — Is defined as the creation, renovation, repair and demolition of immobile structures and the alteration of the natural topography of the ground.

Construction activity — Consists of the output of the **construction industry** plus the output of construction labour forces in other industries.

The construction industry — Is defined as the work performed by establishments primarily engaged in construction on a contract basis. Contract construction in the construction industry is executed by general contractors and special trade contractors. This publication reports "Dollar value" of construction work performed (or put in place) for the construction activity in Canada, as estimated on the basis of surveys (see Statistical Notes, Sources). Included is (1) work performed by the **construction industry** designated as "Contract construction" (Table 2, page 10) or "Contractors" (Table 8, page 17) and (2) work performed by construction labour forces in other than the construction industry, designated as "Own account" or "Other construction" (Table 2, page 10) or "Utilities — Governments — Miscellaneous" (Table 8, page 17).

New construction — Comprises all new work put in place, as well as additions and major renovations, conversions and alterations where either a structural change takes place or the life of an existing asset is extended beyond its normal life expectancy.

DÉFINITIONS

Construction — Création, rénovation, réparation ou démolition de constructions fixes et modification de la topographie naturelle du terrain.

Travaux de construction — Résultat de l'activité de l'**industrie de la construction** et de l'activité dans la construction par la main-d'œuvre appartenant à d'autres branches d'activité.

Industrie de la construction — Comprend les entreprises dont l'activité principale est la construction sous contrat (construction exécutée par des entrepreneurs généraux et des entrepreneurs spécialisés). Le bulletin contient des données sur la "valeur en dollars" estimative des travaux de construction exécutés (ou mis en place) au Canada (voir Renseignements statistiques, sources); il porte 1) sur les travaux exécutés par l'**industrie de la construction** et appellés "construction sous contrat" (tableau 2, page 10) ou par des entrepreneurs (tableau 8, page 17) et 2) les travaux exécutés par une main-d'œuvre n'appartenant pas à l'industrie de la construction et désignés comme "propre compte" ou "autre construction" (tableau 2, page 10) ou "services d'utilité publique — gouvernements — divers" (tableau 8, page 17).

Construction neuve — Ouvrages neufs et rajouts ou rénovations, transformations et réfections importantes, si une modification est apportée à une construction ou si la vie utile d'une immobilisation est prolongée au-delà de sa vie utile probable.

Repair construction — Consists of minor renovations and alterations made to maintain the operating efficiency of the existing structures.

Structures — The construction value, and the structures that this is broken down into, includes all costs incurred directly or indirectly in the construction of the structure. In the independently recognizable structures the value of all permanently built-in equipment forming an integral part of the structure is included, as well as the cost of site preparation and land improvement. The purchase value of land and existing buildings is excluded.

Labour content — The Labour Series as published in *Construction in Canada* is intended to reflect the labour content in terms of "value" and "number" of a specific volume of construction. The "value" is gross payroll and the "number" is an estimate of the total number of persons, employers, own account and paid workers engaged in construction activity, expressed in terms of equivalent man years.

Materials content — Is the cost of materials installed portion of the value of work performed. The residual difference between value of work performed and cost of labour and materials is all other costs and profit.

GENERAL REVIEW

Construction volumes for 1974 and 1975 amounted to \$24,693.1 and \$28,133.4 million. The volume is expected to increase to \$31,448.9 million in 1976. The construction program anticipated for 1976 exceeds the 1975 volume by \$3,315.5 million or 11.8% which compares with increases of 22.4% and 13.9% realized in 1974 and 1975. The increase for 1975 is higher than the 12.5% that was anticipated last year for 1975 and amounts in terms of constant dollar volume to an increase of 1.0%.

The analysis of the total value of work to be put in place in 1976 by the various industries reveals some significant variations over 1975. The mining sector shows the largest percentage increase (35.9%) followed by housing (19.6%) and utilities (13.0%).

Expenditures in all provinces except Prince Edward Island are expected to increase in 1976, with notable advances of 25.9% in Alberta, 22.2% in Saskatchewan and 18.3% in Newfoundland. In 1976, new construction is estimated to be up 12.2% while the repair portion shows an increase of 9.5%. The propor-

Réparations — Rénovations et réfections de moindre importance propres à conserver une construction en état d'exploitation.

Constructions — Le montant des travaux et sa ventilation suivant le genre de construction comprend l'ensemble des dépenses engagées directement ou indirectement dans le cadre des travaux de construction. Dans le cas de constructions reconnaissables comme telles, le montant des travaux comprend le matériel installé à demeure et constituant une partie intégrante de la construction, ainsi que le coût du terrassement et de l'aménagement du terrain; toutefois, la valeur du terrain et des bâtiments existants n'est pas comprise.

Main-d'oeuvre — Les données sur la main-d'oeuvre dans ce bulletin portent sur les "effectifs" et sur leur "valeur" relatifs au volume de construction déterminé. La "valeur" réfère aux rémunérations brutes; les effectifs sont une estimation du nombre total de personnes (employeurs, travailleurs indépendants, propre compte et salariés) qui ont participé à la construction, exprimée en années-hommes.

Matériaux — Les données sur les matériaux portent sur le coût des matériaux entrant dans la construction mise en place. La différence entre la valeur totale des travaux exécutés et le coût combiné de la main-d'oeuvre et des matériaux représente l'ensemble des autres coûts et le bénéfice.

APERÇU GÉNÉRAL

Le volume réel des travaux de construction en 1974 et 1975 s'est élevé à \$24,693.1 et \$28,133.4 millions. On s'attend à ce qu'il passe à \$31,448.9 millions en 1976. Le programme de construction prévu pour 1976 dépasse le chiffre d'affaires de 1975 de \$3,315.5 millions, soit 11.8 % comparativement à des augmentations de 22.4 % et 13.9 % obtenues en 1974 et 1975. L'augmentation de 1975 est supérieure à ce qu'on avait prévu l'année précédente pour cette année-là (12.5 %) et représente, en dollars constants, une hausse de 1.0 %.

En ce qui concerne la valeur globale des travaux qui seront exécutés en 1976 on s'aperçoit que des augmentations importantes se produiront dans les diverses branches d'activité si on les compare à l'année 1975. En pourcentage, le secteur d'exploitation minier démontre la plus forte augmentation (35.9 %) suivi de l'habitation (19.6 %) et des services d'utilité publique (13.0 %).

Pour 1976, toutes les provinces sauf l'Île-du-Prince-Édouard prévoient des hausses dans leurs dépenses dont les plus importantes sont de 25.9 % en Alberta, 22.2 % en Saskatchewan et de 18.3 % en Terre-Neuve. En 1976, on estime une augmentation de 12.2 % pour la construction neuve et une augmentation de 9.5 % pour les travaux de

tion of the complete program to be performed under contract during 1976 will remain comparable to last year's proportion (78.1%). The value of engineering type construction at 42.7% of the total expected volume for 1976 is up 13.8% over 1975, and the building activity portion (57.3%) is up 10.3% over the year before. The strength (dollar volume) in the engineering group of structures is primarily due to projects classified under gas and oil facilities, and electric power construction. The greatest percentage increases in the engineering group of structures will likely occur in the categories of gas and oil facilities, electric power, and railway, telephone and telegraph construction. Building construction will probably rise by 10.3% with the largest dollar volume increases in residential buildings and institutional type buildings such as schools, churches, hospitals, etc. Expenditures on commercial buildings will decrease by \$225.3 million or 6.4%. Primarily, this reflects the concluding phase of expenditures on installations for the Olympic Games. The greatest percentage increase in the building group of structures will probably occur in residential buildings.

A more complete appraisal of the 1976 capital expenditures program will be found in the publications *Private and Public Investment in Canada, Outlook, 1976* (Catalogue 61-205) and *Private and Public Investment in Canada, Mid-Year Review 1976* (Catalogue 61-206).

réparation. La proportion de tous les travaux exécutés sous contrat en 1976 sera comparable à celle de l'année précédente (78.1 %). La valeur des travaux de génie qui représente 42.7 % du volume total prévu pour 1976, dépasse de 13.8 % les chiffres de 1975, alors que le bâtiment (57.3 %) connaît une hausse de 10.3 % sur l'année précédente. L'importance (en dollars) des travaux de génie exécutés est dû principalement à des projets de construction classés sous réseaux électriques, voies ferrées, lignes téléphoniques et télégraphiques et travaux routiers et aérodromes. En pourcentage, on prévoit que l'augmentation la plus importante des travaux de génie devrait se produire dans les catégories de réseaux électriques, voies ferrées, lignes téléphoniques et télégraphiques et des installations du gaz et pétrole. La construction de bâtiment devrait accuser une augmentation de 10.3 % bien que la hausse la plus forte du volume total en dollars devrait se produire dans la construction résidentielle et dans les édifices institutionnels tels qu'écoles, églises, hôpitaux, etc. Les dépenses sur des bâtiments commerciaux vont diminuées de \$225.3 millions soit de 6.4 %. Ceci reflète la dernière phase des dépenses sur les installations des jeux olympiques. En pourcentage, l'augmentation la plus importante dans le bâtiment devrait se produire dans les édifices institutionnels.

Plus de renseignements sur le programme des immobilisations de 1976 se trouvent dans la publication *Investissements privés et public au Canada, "perspective, 1976* (n° 61-205 au catalogue) et" *Investissements privés et publics au Canada, revue de la mi-année 1976* (n° 61-206 au catalogue).

FOOTNOTES

(1) Actual expenditures 1965-1974, preliminary actual 1975, intentions 1976.

(2) In the Statistics Canada report *Private and Public Investment in Canada*, the total value of construction work performed is given as \$24,690.5 million for 1974, \$28,131.7 million for 1975, and \$31,448.5 million for 1976. The differences with values in this report are due to rounding procedures.

(3) Table from *Private and Public Investment in Canada, Outlook 1976*.

(4) Data for government departments include data for departmental crown corporations and exclude data for proprietary crown corporations which are all classified to other industries. Agency crown corporations, on the other hand, are provisionally classified in part to other industries and the remainder to government departments.

(5) Represents work done by the labour force of utilities, government departments and other employees not primarily engaged in the construction industry. Beginning in 1969, materials supplied free of charge to contractors by project owners (previously included in "contract construction") are included in other construction.

(6) "Other building", and "other engineering", items 35 and 87 respectively, contain structures which could not be published in their specific categories due to the secrecy provisions of the Statistics Act.

(7) British Columbia includes Northwest Territories and Yukon.

(8) "Miscellaneous" consists of construction work done by firms not primarily engaged in the construction industry, i.e., the construction labour forces of the primary (except construction), manufacturing, trade, finance, commercial, residential and institutional sectors.

(9) Primary industries include agriculture, fishing, mining, forestry and the construction industry.

(10) The capital construction expenditures for mines include outlays for on-property exploration and development.

(11) Beginning with the 1972 preliminary actual data, an estimate was included for municipal services installed and financed by residential developers before being turned over to the municipal governments. The figures for previous years will be revised when more complete data are available.

(12) Certain data have been revised to reflect revisions to the National Income and Expenditure Accounts.

(13) Number of employees is given in equivalent man-years.

(14) A breakdown of repair expenditures for residential construction by type of structure is not available. Total repair expenditures are included within the "other" residential category. For new residential construction, "other" includes expenditures on mobile homes, cottages, conversions, major alterations, improvements and acquisition costs.

NOTES

(1) Dépenses réelles en 1965-1974, dépenses réelles provisoires en 1975, et dépenses projetées en 1976.

(2) Dans le bulletin de Statistique Canada intitulé *Investissements privés et publics au Canada*, la valeur globale des travaux de construction est de \$24,690.5 millions en 1974, \$28,131.7 millions en 1975 et \$31,448.5 millions en 1976; cette différence est attribuable au fait que les chiffres ont été arrondis.

(3) Tableau tiré de *Investissements privés et publics au Canada, perspectives de 1976*.

(4) Les données provenant des ministères gouvernementaux comprennent aussi celles des corporations de la couronne de département tandis que les données des corporations de la Couronne de propriétaire sont comprises avec les autres entreprises. Par contre, une partie des corporations de la Couronne de mandataire sont temporairement classées comme entreprises et le reste sont rangées sous "administrations fédérales".

(5) Comprend les travaux effectués par la main-d'œuvre des Services d'utilité publique, des ministères gouvernementaux et d'autres employeurs qui n'appartiennent pas à l'industrie de la construction. A partir de 1969 la valeur des matériaux de construction fournis gratuitement aux entrepreneurs par les propriétaires des projets de construction (antérieurement incluse dans "construction sous contrat") est comprise dans "autre construction".

(6) Les postes 35 (autres bâtiments) et 87 (autres travaux de génie) comprennent des constructions qui ne peuvent être rangées dans leurs catégories propres en vertu des dispositions de la Loi sur la statistique relatives au secret.

(7) La Colombie-Britannique comprend également le Yukon et les Territoires du Nord-Ouest.

(8) "Divers" comprend les travaux de construction exécutés par des entreprises qui n'exercent pas principalement de telles fonctions, i.e., les travaux de construction effectués par la main-d'œuvre des industries primaires (sauf l'industrie de la construction), manufacturières, de commerce, finances et services commerciaux, résidentiels et services institutionnels.

(9) Les industries primaires comprennent l'agriculture, la pêche, les mines, l'exploitation forestière et l'industrie de la construction.

(10) Les immobilisations en construction pour les mines comprennent les dépenses d'exploration sur les propriétés.

(11) Commençant avec les dépenses réelles provisoires de 1972, les données comprennent une estimation pour services municipaux installés et financés par les exploitants domiciliaires avant qu'ils soient retournés aux gouvernements municipaux. Les chiffres pour les années précédentes seront revisés lorsque des données plus complètes seront disponibles.

(12) Certaines données ont été révisées afin de démontrer des modifications apportées aux comptes nationaux de revenus et de dépenses.

(13) Le nombre d'employés est rapporté sur une base comparable d'hommes-années.

(14) La répartition des dépenses en réparations de la construction résidentielle par genre de structure n'est pas disponible. Le total des dépenses en réparations est inclus dans l'"autre" catégorie résidentielle. Pour ce qui a trait à la construction résidentielle neuve "autre" comprend les dépenses pour les maisons mobiles, chalets, transformations, réfections importantes, améliorations et coûts d'acquisition.

STATISTICAL NOTES

Sources

The statistics presented in this report are based on information received from organizations and individuals paying for the work done and on information received from contractors performing the work.

The data on the value of construction by type of structure is the result of two separate surveys:

- (a) the capital expenditures survey which obtains information from business firms, institutions and government-owned enterprises;
- (b) the construction survey of government departments which provides much of the remainder.

In both these surveys respondents report their total expenditures on new and repair construction, by type of structure, additional to a breakdown of these totals into value of work done by contract and by own labour force.

The data on labour and materials input are based on the survey of contractors and sub-contractors and on the censuses of mechanical and electrical trade contractors, highway, road, bridge, residential and non-residential general contractors.

Respondents report volume of work performed and its input components, as well as further data on type of work, labour force, and capital expenditures.

Methods and Coverage

(i) Of the total value of construction shown, about 82.2% was reported in capital spending surveys of business firms, institutions, government enterprises and departments and residential building activity. The remainder is estimated.

A brief outline of the methods employed to make these estimates is given in the following paragraphs. For a more complete description of these methods, see page 36 of the report *Private and Public Investment in Canada, Outlook 1976*.

RENSEIGNEMENTS STATISTIQUES

Sources

Les statistiques publiées ici sont fondées sur les renseignements obtenus d'organismes ou de particuliers qui ont défrayé le coût des travaux exécutés et sur les renseignements recueillis auprès des entrepreneurs qui ont exécuté les travaux.

Les données sur le montant des travaux selon la nature des constructions sont tirées de deux enquêtes:

- a) l'enquête sur les immobilisations qui porte sur les entreprises commerciales, les établissements publics et les entreprises publiques;
- b) l'enquête sur la construction menée auprès des administrations publiques.

Dans les deux cas, les enquêtés doivent déclarer le montant total des travaux, selon la nature des travaux et selon la construction neuve et les réparations; ils doivent de plus ventiler ces totaux en fonction de la valeur des travaux exécutés sous contrat et de la valeur des travaux effectués par leur propre main-d'œuvre.

Les données sur la main-d'œuvre et les matériaux utilisés sont tirées d'une enquête menée auprès des entrepreneurs et des sous-traitants et des recensements effectués auprès d'entrepreneurs spécialisés des domaines de la mécanique de l'électricité et des entrepreneurs généraux dans les travaux de grandes routes, rues, chemins et ponts et dans la construction de bâtiments résidentiels et non-résidentiels.

Les enquêtés doivent enfin donner des renseignements sur le volume des travaux exécutés, les moyens mis en oeuvre, le genre de construction, la main-d'œuvre et les immobilisations.

Méthodes et champ d'enquête

(i) Il est établi que 82.2 % de la valeur totale de la construction indiquée dans le bulletin a été déclarée dans le cadre des enquêtes sur les dépenses en immobilisation des entreprises commerciales, des établissements publics, des entreprises publiques, des administrations publiques et du secteur de la construction résidentielle. Le reste a été évalué.

Nous donnons ci-après un bref aperçu des méthodes utilisées dans ce travail d'estimation. On trouvera à la page 36 du bulletin *Investissements privés et publics au Canada, perspectives de 1976* une explication plus complète de ces méthodes.

To approximate full coverage adjustments are made to the surveyed data to allow for non-reporting firms.

In manufacturing, the method used to inflate the reported expenditures was to multiply the known expenditures by a factor obtained by dividing the total value of shipments for the most recent year available of all the firms in each industry by the corresponding total for the firms reporting in the current surveys. The use of shipments as related indicator provides a framework of analysis in the estimation procedures to take account of relevant industry characteristics such as the size of firms. In the utilities, trade, finance and institutional and commercial services sectors the same principle has been followed using appropriate basic data for the sector concerned. Expenditures reported by establishments for which no production or other basic data are available are included as "net additions". It is believed that the estimating procedures for non-reporting firms and the sectors not covered by direct survey do not introduce any great margin of error into the total.

The large sample size reduces the standard error of estimate, which will vary for specific structures, regions and industries depending on individual coverage.

Both the 1975 preliminary actual expenditures and the 1976 forecast expenditures were reported by business establishments on the same questionnaire form. With the reported figures covering both years coming from the same group of establishments and with the estimating techniques for non-reporting firms the same for each year, the percentage change from 1975 to 1976 can be calculated with more accuracy than the absolute magnitude of expenditures in the two years.

The data on 1976 construction expenditures are aggregates of the intentions of the individual respondents. These estimates are therefore subject to different realization caused by several internal and external factors such as business outlook, government policy, price trends, strikes and shortages.

Finally, the capital expenditure surveys provide own account data.

(ii) The contractor surveys provide the ratios on which labour and materials content calculations are based.

Des ajustements sont apportés aux données recueillies lors de l'enquête, afin de corriger les biais que pourraient entraîner les cas de non-réponse et de donner une plus grande portée à l'enquête.

Dans le cas de l'industrie manufacturière, la méthode utilisée pour gonfler les dépenses déclarées consiste à multiplier les dépenses connues par un facteur obtenu en divisant la valeur totale des livraisons de l'année la plus récente, pour les entreprises appartenant à une même branche d'activité, par le total correspondant des entreprises qui ont répondu au questionnaire de l'enquête courante. Les livraisons sont en effet un indicateur qui constitue un cadre d'analyse des méthodes d'évaluation propre à tenir compte des caractéristiques de chaque branche d'activité (la taille des entreprises, par exemple). On a appliqué le même principe pour les services d'utilité publique, le commerce, les finances, les établissements publics et les services commerciaux. Les dépenses déclarées par des établissements pour lesquels nous n'avions pas de données sur la production ni aucun autre renseignement fondamental sont considérées comme "additions nettes". Nous estimons que les méthodes d'évaluation appliquées aux entreprises qui n'ont pas répondu au questionnaire, ainsi qu'aux secteurs qui ne sont pas touchés directement par une enquête directe, n'introduisent pas de marge d'erreur importante dans le total.

La taille de l'échantillon tend à réduire l'erreur d'estimation type; cette dernière peut d'ailleurs varier en fonction de la nature des constructions, des régions et des industries, selon les renseignements obtenus de chaque enquête.

Les entreprises observées ont déclaré sur le même questionnaire, leurs dépenses réelles, à titre provisoire, pour 1975, ainsi que leurs prévisions pour 1976. Comme les chiffres déclarés proviennent du même groupe d'établissements, qu'ils portent sur deux années et qu'on utilise chaque année les mêmes méthodes d'évaluation pour les établissements qui n'ont pas répondu au questionnaire, la variation en pourcentage entre 1975 et 1976 peut se calculer avec plus de précision que le chiffre absolu des dépenses pour ces deux années.

Les données sur les coûts de construction de 1976 représentent la somme totale des projets de construction de chaque enquêté. Elles peuvent être modifiées selon les éventualités, par ex.: les perspectives commerciales, les politiques de l'État, la tendance des prix, les grèves et la pénurie de matériaux.

En dernier lieu, les enquêtes sur les immobilisations servent à recueillir des données sur le "propre compte".

(ii) Les enquêtes sur les entrepreneurs permettent d'établir des ratios sur lesquels on fonde les calculs relatifs à la main-d'œuvre et aux matériaux.

Number of employees are arrived at by dividing the labour content by annual average wage rates which were projected from 1963 contractor survey data.

Data on labour value are understated for the years 1975 and 1976 since ratio of labour content in the survey year was not adjusted to reflect wage increases, this also has a lowering effect on the man years figure.

(iii) Housing estimates were made on a different basis from those derived from information submitted directly by business or government. For 1974 and 1975, estimates of the volume of residential construction were prepared on the basis of results from surveys conducted by the Central Mortgage and Housing Corporation and the value estimates were prepared by Statistics Canada. These value estimates were calculated by means of a very sensitive methodology based on the duration of construction and monthly measures of work put in place. Appraisals of the probable volume of housing construction in 1976 were made by field representatives of the Corporation who consulted local officials, builders, contractors, supply firms, and other individuals and firms concerned with future housing construction projects. Using information obtained from these sources and their own knowledge, the representatives of the Corporation made estimates of private and government initiated housing for all municipalities in Canada with a population of 10,000 and over. The five regional offices and the head office of the Corporation checked these estimates. Independent estimates were made of housing in areas of less than 10,000 population. Finally, an allowance was made for other housing expenditures such as home conversions, mobile homes, alterations, home improvements and acquisition costs which amounted to approximately 16% of total expenditures. Allowing for probable changes in construction costs, estimates were then prepared for the value of construction work carried over from 1975 and the value of work expected to be undertaken in 1976.

Le calcul des effectifs se fait en divisant la partie main-d'oeuvre des dépenses par les taux de salaire annuel moyens qui furent projetés à partir des données de l'enquête de 1963 sur les entrepreneurs.

Les données sur la rémunération et sur les effectifs en années-hommes pour 1975 et 1976 sont inférieures à la réalité en raison du fait que le contenu en main-d'oeuvre de l'année observée n'a pas été corrigé de façon à refléter les augmentations de salaire.

(iii) Pour l'habitation, les estimations n'ont pas été établies sur la même base que celles qui découlent des renseignements fournis directement par les entreprises ou les pouvoirs publics. En 1974 et 1975, elles ont été calculées d'après les résultats des enquêtes menées par la Société centrale d'hypothèques et de logement; c'est Statistique Canada qui a fait ces estimations au moyen d'une méthodologie très complexe fondée sur la durée des travaux et sur les réalisations mensuelles. En 1976, des estimations du montant probable des travaux de construction résidentielle ont été faites par des représentants sur place de la Société qui ont consulté les administrateurs locaux, les constructeurs, les entrepreneurs, les fournisseurs de matériaux, et des autres particuliers ou sociétés intéressées. Grâce aux renseignements ainsi obtenus et à leurs propres connaissances, les représentants de la Société ont fait des prévisions sur l'habitation privée et sociale dans toutes les municipalités du Canada de 10,000 habitants et plus. Les cinq bureaux régionaux et le bureau central de la Société ont vérifié leurs estimations. Dans les régions de moins de 10,000 habitants, le logement a fait l'objet d'estimations distinctes. Enfin, on a tenu compte des autres dépenses d'habitation telles que les transformations d'habitation, les maisons mobiles, les changements, les améliorations et les frais d'acquisition qui représentent environ 16 % des dépenses totales. En tenant compte de l'évolution probable des coûts de la construction, on a pu alors estimer la valeur des travaux reportés de 1975, et celle des mises en chantier envisagées pour 1976.

the following morning
I will be available to
you at any time.

Yours sincerely,

John C. Stennis
