HOUSEHOLD FACILITIES AND EQUIPMENT

MAY 1963

I INTRODUCTION

This report presents statistics derived from the latest in the series of annual sample surveys on household facilities and equipment. The survey was carried out in conjunction with the May 1963 Labour Force Survey; approximately 30,000 households, chosen by area sampling methods in about 170 areas, were interviewed.

While the content of the questionnaire was mostly the same as in 1962, several changes were made. This year a question on household electrification was asked for the first time since 1959. Vacuum cleaners and sewing machines last covered in 1961 were also included in this year's questionnaire. The 1962 questions on electric floor polishers, lawn mowers and authorize were not used in the 1963 survey.

II CONTENTS OF THE TABLES

The tables in this report contain data for Canada as a whole and, except for Tables 1, 5, 6, 8 and 10, the provinces. Following is a summary by broad groupings of the characteristics covered in the tables:

Tables 1 - 9: Housing characteristics
Tables 10 - 13: Heating equipment and fuel

Tables 14 - 17: Water supply and plumbing facilities

Table - 18: Electrification

Tables 19 - 26: Household appliances

Table - 27: Phonographs and record players
Tables 28 - 31: Telephones, radios and T.V. sets
Table - 32: Automobiles and garage facilities

III OTHER DATA AVAILABLE

In addition to the published statistics, there are other data available. Following is a list of unpublished material which can be obtained on request:

A. - Canada as a whole

1. Number of households by age of certain household appliances (cooking equipment, electric refrigerators, washing machines).

2. Principal heating equipment.

3. Principal heating fuel.

4. (a) Water supply and (b) Source of water.

5. Fuel used for piped hot water supply.

6. (a) Installed bath and (b) toilet facilities.

7. Electrification.

8. Cooking equipment.

9. Electric refrigerators and home freezers.

(a) Electric refrigerators

(b) Home freezers

10. (a) Electric washing machines and (b) Electric clothes dryers.

11. Vacuum cleaners and sewing machines.

12. Phonographs and record players.

13. Radios.

14. (a) Telephones and (b) T.V. sets.

15, Automobiles.

B. - Canada, by urban-rural categories - percentage of households having certain facilities and equipment.

1. Principal heating equipment and fuel; fuel used for piped water heating.

2. Water supply and plumbing facilities.

3. Household appliances (cooking equipment, electric refrigerators, home freezers, electric washing machines, electric clothes dryers).

4. Telephones, radios, T.V. sets and phonographs.

5. Automobiles.

C. - Metropolitan Areas with 50,000 or more households - percentage of households having certain facilities and equipment.

1. Principal heating equipment and fuel; fuel used for piped water heating.

 Household appliances (cooking equipment, electric refrigerators, home freezers, electric washing machines, electric clothes dryers).

3. Telephones, radios, T.V. sets and phonographs.

4. Automobiles.

IV COVERAGE

The sample for this survey is designed to include all households in Canada with certain exceptions. Excluded are: households in the Yukon and Northwest Territories; households on Indian reserves; institutional households; military camps; other collective-type households such as those living in hotels, large lodging houses, clubs, logging and construction camps; certain private households living in trailers, in summer cottages, on boats, etc.

V DEFINITIONS

DWELLING: A dwelling is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside.

HCUSEHOLD: A person or a group of persons occupying one dwelling unit is defined as a "household". Every individual is a member of some household. The number of households will thus be equal to the number of occupied dwellings.

SINGLE DETACHED DWALLING: This type of dwelling is commonly called a single house, i.e., a house containing one dwelling unit and completely separated on all sides from any other building or structure.

SINGLE ATTACHED DWELLING: Each half of a semi-detached (or double) house, and each section of a row or terrace is defined as a "single attached" dwelling.

APARTMENTS AND FLATS: These include:

- (i) dwelling units in apartment blocks or apartment hotels;
- (ii) suites in duplexes or triplexes, i.e., where the division between dwelling units is horizontal;
- (iii) suites in structurally converted houses;
- (iv) living quarters located above, or in the rear of stores, restaurants, garages, or other business premises;
- (v) janitors' quarters in schools, churches, warehouses, etc.; and
- (vi) private quarters for employees in hospitals or other types of institutions.

ROOMS: In determining the number of rooms in a dwelling, only those rooms used or suitable for living purposes, including rooms occupied by servants, lodgers, or members of lodging families, are counted. The following are not counted as rooms: bathrooms, pantries, halls, clothes closets, and rooms used solely for business purposes. Summer kitchens, sun-rooms, rooms in basements or attics are not counted unless they are finished off and suitable for living quarters throughout the year. "Kitchenettes" are included if the normal kitchen functions are carried out therein and if they contain, as a minimum, cooking facilities (such as a stove or range) and a sink or tub.

BEDROOMS: Included as "bedrooms" are all rooms designed and furnished as bedrooms, and used as such, even though the use may be occasional as in the case of a "spare" bedroom. Bed-sitting rooms, or other such rooms used for sleeping and living, are not included. In the case of all one-room dwellings, such as bachelor apartments, and of many other small dwellings, no "bedroom" would be reported.

VI RELIABILITY OF ESTIMATES

The estimates in this report are based on a sample of households and may differ from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions and enumerators. In general, the smaller the size of the estimate the greater is the relative sampling variability. The sampling variability associated with estimates of less than 4,000 is appreciably larger than fifty per cent. In the tables, estimates which are less than 4,000 are replaced by an asterisk.

Differences from year-to-year in corresponding estimates are themselves subject to a variability which is dependent on the sizes of the estimates, their inherent variability, and the interdependence of the samples used. In the Canadian Labour Force Survey the samples from year-to-year differ in the households enumerated and, in some cases, in the geographical areas included in the sample. The estimates as here published constitute the best 1963 estimates of the numbers of households and their characteristics. However, differences between successive years, especially for smaller provinces in matters where the change has been small are subject to substantial sampling variation. This variation could be reduced by an increase in the sample size, but it is considered that for most analyses of household facilities the accuracy provided is adequate.

In addition to the sampling variability outlined above, the data obtained from either a sample or a census will differ from the actual data because of enumerator and respondent variations. The principal elements of this nature are as follows:

- 1. The enumerator may misinterpret the concepts and definitions despite careful instruction.
- 2. The enumerator may, by chance, phrase questions which influence the answers of the respondent.
- The respondent may, by chance, phrase answers which influence the questions by the enumerator.
- 4. There may be deliberate mis-statement by either enumerator or respondent.

The non-sampling error is a prevalent in a complete count as in a sample, and, in some cases, may exceed the error introduced by sampling.
