

HOUSEHOLD FACILITIES AND EQUIPMENT

MAY 1966

I - INTRODUCTION

This report presents statistics derived from the latest in the series of annual sample surveys on household facilities and equipment. The survey was carried out in conjunction with the May 1966 Labour Force Survey; nearly 35,000 households, chosen by area sampling methods in about 450 areas, were included in the sample.

There were several changes from 1965 in the content of the survey questionnaire. New questions on battery-operated radios (see Table 28) and colour T.V. (see footnote (4) to Table 26) were added in 1966. Questions on floor polishers, lawn mowers and outboard motors, last used in 1964, were included again this year. The 1965 questions on vacuum cleaners and sewing machines were not used in the 1966 survey.

II - CONTENTS OF THE TABLES

The tables in this report contain data for Canada as a whole and, except for Tables 1, 5, 6, 8 and 10, the provinces. Following is a summary by broad groupings of the characteristics covered in the tables:

Tables 1 - 9:	Housing characteristics
Tables 10 - 13:	Heating equipment and fuel
Tables 14 - 17:	Water supply and plumbing facilities
Tables 18 - 24:	Household appliances
Table 25:	Phonographs and record players
Tables 26 - 29:	Telephones, radios and T.V. sets
Table 30:	Lawn mowers
Table 31:	Outboard motors
Table 32:	Automobiles and garage facilities
Table 33:	Automobile radios

III - OTHER DATA AVAILABLE

In addition to the published statistics, there are other data available. Following is a list of unpublished material which can be obtained on request:

A. - Canada as a whole

1. Number of households with specified household appliances by age of equipment (cooking equipment, electric refrigerators, washing machines).

B. - Canada, by urban-rural categories - percentage of households having certain facilities and equipment

1. Principal heating equipment and fuel; fuel used for piped hot water supply.
2. Water supply and plumbing facilities.
3. Household appliances (cooking equipment, electric refrigerators, home freezers, electric washing machines, electric clothes dryers).
4. Telephones, radios, T.V. sets and phonographs.
5. Automobiles.

C. - Metropolitan Areas with 50,000 or more households - percentage of households having certain facilities and equipment

1. Principal heating equipment and fuel; fuel used for piped hot water supply.
2. Household appliances (cooking equipment, electric refrigerators, home freezers, electric washing machines, electric clothes dryers).
3. Telephones, radios, T.V. sets and phonographs.
4. Automobiles.

IV - COVERAGE

The sample for this survey is designed to represent all households in Canada with certain exceptions. Excluded are: households in the Yukon and Northwest Territories; households on Indian reserves; institutional households; military camps; other collective-type households such as those living in hotels, large lodging houses, clubs, logging and construction camps; certain private households living in trailers, in summer cottages, on boats, etc.

V - DEFINITIONS

DWELLING: A dwelling is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside.

HOUSEHOLD: A person or a group of persons occupying one dwelling unit is defined as a "household". The number of households will therefore be equal to the number of occupied dwellings.

SINGLE DETACHED DWELLING: This type of dwelling is commonly called a single house, i.e., a house containing one dwelling unit and completely separated on all sides from any other building or structure.

SINGLE ATTACHED DWELLING: Each half of a semi-detached (or double) house, and each section of a row or terrace is defined as a "single attached" dwelling.

APARTMENT OR FLAT: This type of dwelling includes:

- (i) dwelling units in apartment blocks or apartment hotels;
- (ii) suites in duplexes or triplexes, i.e., where the division between dwelling units is horizontal;
- (iii) suites in structurally converted houses;
- (iv) living quarters located above, or in the rear of stores, restaurants, garages, or other business premises;
- (v) janitors' quarters in schools, churches, warehouses, etc.; and
- (vi) private quarters for employees in hospitals or other types of institutions.

ROOMS: In determining the number of rooms in a dwelling, only those rooms used or suitable for living purposes, including rooms occupied by servants, lodgers, or members of lodging families, are counted. The following are not counted as rooms: bathrooms, pantries, halls, clothes closets, and rooms used solely for business purposes. Summer kitchens, sunrooms, rooms in basements or attics are not counted unless they are finished off and suitable for living quarters throughout the year. "Kitchenettes" are counted if the normal kitchen functions are carried out therein and if they contain, as a minimum, cooking facilities (such as a stove or range) and a sink or tub.

BEDROOMS: Included as "bedrooms" are all rooms designed and furnished as bedrooms, and used as such, even though the use may be occasional as in the case of a "spare" bedroom. Bed-sitting rooms, or other such rooms used for sleeping and living, are not included. In the case of all one-room dwellings, such as bachelor apartments, and of many other small dwellings, no "bedroom" would be reported.

VI - RELIABILITY OF ESTIMATES

The estimates in this report are based on a sample of households and may differ from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions and enumerators. In general, the smaller the size of the estimate the greater is the relative sampling variability. The sampling variability associated with estimates of less than 4,000 is appreciably larger than fifty per cent. In the tables, estimates which are less than 4,000 are replaced by an asterisk.

Differences from year to year in corresponding estimates are themselves subject to a variability which is dependent on the sizes of the estimates, their inherent variability, and the interdependence of the samples used. In the Survey of Household Facilities and Equipment the samples from year to year differ in the households enumerated and, in some cases, in the geographical areas included in the sample. The estimates as here published constitute the best 1966 estimates of the numbers of households and their characteristics. However, differences between successive years, especially for smaller provinces in matters where the change has been small, are subject to substantial sampling variation.

A factor which greatly increased the sampling variability on estimates of year-to-year change in the period 1963 to 1966 was the introduction of a new sample design. New samples of improved design were brought into use for Newfoundland, Ontario, Manitoba, Saskatchewan and British Columbia between the 1965 and 1966 surveys. New samples had been introduced in Prince Edward Island, Nova Scotia, New Brunswick and Quebec between the 1964 and 1965 surveys, and in Alberta between the 1963 and 1964 surveys. Comparison of estimates for particular provinces and for Canada as a whole will be affected by the absence of interdependence of the respective samples between the years mentioned.

In addition to the sampling variability outlined above, the data obtained from either a sample or a census will differ from the actual data because of enumerator and respondent variations. The principal elements of this nature are as follows:

1. The enumerator may misinterpret the concepts and definitions despite careful instruction.
2. The enumerator may, by chance, phrase questions which influence the answers of the respondent.
3. The respondent may, by chance, phrase answers which influence the questions by the enumerator.
4. There may be deliberate mis-statement by either enumerator or respondent.

The non-sampling error is as prevalent in a complete count as in a sample, and, in some cases, may exceed the error introduced by sampling.

Alta.	367	166	110	53	38	325	42
B.C.	503	201	144	85	73	464	39

(1) See Section IV, "Coverage". (2) All types except automobile radios. (3) A specific question on battery-operated radios was added in 1966. It appears, that by focussing particular attention on this type of radio, there was less tendency for respondents to overlook small transistor radios than in the past. A large part of the indicated decrease in single-radio households and increase in multiple-radio households between 1965 and 1966 is probably due to this factor. (4) Included in the number of "Households with T.V. sets" are 35,000 households with colour T.V. sets, of which 25,000 are in Ontario. *Less than 4,000. - See Section VI, "Reliability of Estimates".
