## **FOREWORD**

By making its records available to the Dominion Bureau of Statistics, the Victorian Order of Nurses — largest organization of its kind in Canada, and the only one operating in nine provinces — has enabled a detailed appraisal of its home nursing services to be published annually. For their assistance with this, the tenth and final annual report, we wish to acknowledge with thanks the co-operation of the Order's nurses and administrative staff. Discontinuance of this series, made necessary by a change in emphasis in overall health statistics, is much regretted.

This report was prepared in the Public Health Section of the Dominion Bureau of Statistics.

**WALTER E. DUFFETT,**  
*Dominion Statistician.*

## INTRODUCTION

The Victorian Order of Nurses for Canada, referred to in this report as the V.O.N., is a voluntary non-profit organization established in 1897. It provides a variety of services, of which only nursing care and health counselling in the home are dealt with in this report. During 1961, the Order had 117 branches in operation, with 638 nurses on a permanent basis and 12 nursing assistants; other nursing personnel were also employed on a relief basis. About 51 per cent of Canada's population is located in the areas serviced by V.O.N. branches. Because case and visit statistics in this report relate only to patients discharged during the year, the actual volume of work carried out by the V.O.N. during 1961 may be understated or overstated.

Each attending nurse at the branch level prepares Patients' Service Record Forms for each patient who receives care. Information gathered from these forms is assembled in such a manner that comprehensive statistics are made available for the following categories:

- (1) Number of cases discharged in the course of the year.
- (2) The nature of the illness or condition, as diagnosed by the attending physician, for which either nursing care or health instruction was provided.
- (3) Number of visits made for each discharged case, between the time that nursing service was first rendered until the case was discharged.
- (4) Case and visit information is further analysed with reference to maternity and newborn cases and cases requiring medical and surgical treatment.

### Concepts and Definitions

The following definitions and explanations are presented as a guide in interpreting specific terms used in this report.

**Case.**—A case is defined as a person who receives home nursing care or health instruction in connection with a particular condition. The duration of a case is measured from the time nursing service is first given to a patient until the time this service is no longer required. There are a variety of reasons, not necessarily dependent on the recovery of the patient, which would result in the termination of nursing services.

It is possible for a person to be included as a case more than once in the course of a year if varied medical conditions occur during different periods. If a patient receives nursing care for more than one condition at the same time, this case is coded for the condition requiring the majority of visits. In addition, if a maternity case develops complications not related to pregnancy or confinement and for which medical-surgical care is given, the case is included in both maternity and medical-surgical case statistics.

Two important changes occurred in the compiling of statistics in the 1958 publication which affect the comparability of case and visit totals with those published in prior years. Previously all cases receiving nursing service during the course of the year were included in the current year's statistics even if nursing service had not terminated by the end of the year. All cases not discharged in the current year would be "readmitted" in the subsequent year and counted as separate cases in each year during which continuous nursing service was rendered. As this procedure seriously affected the ratio of the number of visits applicable to each case, it was decided to exclude from current statistics all cases not discharged during the course of the year. Current visit statistics include all visits made to each case from the time that the case first received nursing care even if the case had been receiving treatment continuously for a number of years. Prior to 1958 only visits made in the current year were included in the data.

**Visit.**—A single call is always recorded as one visit, even if the patient receives general nursing care for a medical-surgical condition and maternity care at the same time. The same applies to a visit where both care and instruction are given, except for maternity cases in the postnatal classification. Visits for postnatal and newborn care are counted as two visits on both the first and last visit made to the patient. All other visits in the postnatal category are treated as single visits unless services are rendered separately to both the mother and the child.

**Classification on Admission.**—Services are grouped by type of admission as follows:

1. Medical-surgical
2. Well infant
3. Prenatal
4. Postnatal
5. Newborn
6. Health instruction only
7. Health instruction on behalf of infants originally admitted as newborn
8. Patient not seen
9. On behalf of patient

**Duration of Nursing Services.**—This is the period between "date opened" and "date discharged" on the Patient's Service Record, regardless of the number of visits made during that period. "Date opened" may be prior to the beginning of the report year.

If a mother is admitted as prenatal, the duration of nursing service for the newborn is the period from:

- (a) the date of delivery to the date of discharge, when delivered in the home with the nurse at delivery, or
- (b) the date admitted on return from hospital to the date of discharge, when delivered in hospital.

**Diagnostic Classification.**—The medical coding for each case is based on the International Statistical Classification of Diseases, Injuries, and Causes of Death (1955 Revision). The analysis of morbidity in Table 5 is based on the Special List of 50 Causes for Tabulation of Morbidity as recorded in the aforementioned publication. The Classification C49 (Other specified and ill-defined diseases) has been further analysed in Table 5 as described in Table 0. The morbidity classification of all other tables in which causes of illness are shown is based on Table N.

#### Terms Used in Maternity and Newborn Section

**Prenatal.**—Cases that are recorded and visits that are made during the pre-confinement stage of the maternity cycle.

**Postnatal.**—Cases and visits that are applicable to the post-confinement period of the maternity cycle. Total visit statistics include postnatal visits to persons admitted in the prenatal stage of the maternity cycle as well as to postnatal admissions.

**Newborn.**—Infants during the first 28 days of life.

#### Terms Used in Tables A and D

**Other Health Instruction.**—Cases admitted for "health instruction only" receive no general nursing care visits. Each infant benefiting from health instruction after the initial newborn period of 28 days from birth is considered as a separate admission.

### SUMMARY OF FINDINGS

During 1961 the V.O.N. discharged almost 110,000 cases following care which involved nearly 1,031,000 visits by the Order's nurses.

Seven out of every ten staff visits were made to patients whose conditions, often chronic in nature, had been classified on admission as "medical-surgical". Close to 50 per cent of these patients were at least 65 years of age.

While 2.5 per cent more medical-surgical cases were discharged after care in 1961 than in the previous year, for the remaining patient categories—maternity, newborn, other health instruction—discharges declined by an average of 3.7 per cent. The shift in case type was reflected in corresponding changes in visits: a 1.3 per cent advance in visits to medical-surgical patients, and 5.8 per cent fewer visits to patients in other categories.

More visits were required, on the average, by medical-surgical than by other types of cases. In 1961 the average number of visits per medical-surgical case (excluding cases in which complications of pregnancy were involved) was 19.1, the same as in 1950. Fewer than 6 visits per mother and baby were made to maternity and newborn cases.

The age categories of cases not included in the Maternity, Newborn or Medical-Surgical classifications are defined as follows:

**Infants.**—Cases admitted under one year of age.

**Preschool.**—Cases admitted between the ages of one and five years who have not reached the Grade I level in elementary school.

**School Children.**—All cases attending either elementary school above the kindergarten level or high school. Also all other cases between the ages of six and fifteen years who are not attending school.

**Adults.**—All cases not included in the above categories.

#### Other Visits

Visits made to cases in which the patient was not seen by the nurse or in which visits were made on behalf of the patient to some other person or agency such as a physician or clinic.

#### Other Services

As certain types of service such as assisting at home deliveries, operations, etc., are more demanding on the nurses' time than is normally the case, specified weights are assigned to these visits by the V.O.N. for administrative purposes. Table A records the additional number of visits added because of this weighting practice.

The median ages of medical-surgical cases in 1961—60.5 for males and 64.2 for females—differed only fractionally from the corresponding 1959 and 1960 medians.

#### Maternity and Newborn Services

Maternity and newborn services cover care and supervision of the mother during pregnancy; nursing care to the mother and baby on return from hospital; assistance to the doctor at the time of the delivery, if the baby is born at home, and care of both mother and child immediately following birth, with continuing instructions to the mother. Newborn admissions are limited to those infants admitted for nursing service prior to 28 days after their date of birth. In addition, visit data are limited to those visits made during this same time interval.

As V.O.N. care for newborn regularly extends for six weeks from date of birth, the information supplied in Table 3 is not indicative of the entire service rendered to newborn admissions. Data on maternity services exclude cases involving complications of pregnancy since the latter are classified as medical-surgical cases.

In 1961 a total of 31,624 women, 4.9 per cent fewer than in the previous year, were discharged from maternity services following prenatal and postnatal care. This drop of 1,610 in discharges is undoubtedly indicative of a change in the pattern of maternal care and instruction provided by the V.O.N., with more expectant mothers attending prenatal education classes and fewer asking for actual home attendance. Over the same period, newborn service declined by 2.8 per cent, from 31,542 discharges in 1960 to 30,675 in 1961. For every mother experiencing a complication during the maternity cycle, about 15 mothers (compared with 21 in 1960) had normal pregnancies. As noted in previous years, the frequency of childbirth complications tend to increase with the age of the mother.

#### Medical-Surgical Services

Although V.O.N. services are available to over 50 per cent of the Canadian population in nine provinces (no branches operate in Prince Edward Island), morbidity statistics based solely on the care given by the Order are of limited value in assessing the incidence and prevalence of illness in the population at large.

As indicated in Table G, several diagnostic-groups—in particular influenza, tuberculosis of the respiratory system, and diseases of the heart (other than arteriosclerotic and degenerative heart disease)—declined as causes of care between 1959 and 1961; however, because of the small number of cases in the various cause groups, little significance can be attributed to the fluctuations observed from year to year among diagnoses.

The volume of home nursing care required by a patient varies considerably with his age and his complaint. A diabetic, for example, might require

900 visits before discharge if his care extended for three years or more. In the case of diabetics discharged in 1961 following care lasting for a period of 3 months to 1 year, an average of about 17 visits were made to those under 15 years of age and 80 visits to those 65 years of age and over.

In recent years a trend towards a higher proportion of post-hospital cases among persons receiving V.O.N. care has been noted. The relative importance of the various diseases for which hospitalization and post-hospital care were required has remained fairly constant. The most important cause of post-hospital care in 1961 was malignant neoplasms: hospitalization preceded V.O.N. care in approximately 71 per cent of male cases and 68 per cent of female cases.

Only 9.2 per cent of all cases discharged in 1961 had been gainfully employed on admission. Among those not gainfully employed, retired persons (the largest group) accounted for the greatest proportion of 1961 discharges who had been given care for 1 year or longer.

For purposes of classification, visits have been divided into "health instruction only" and "general nursing care". It must be remembered, however, that general nursing care visits always include health instruction. This teaching function is considered to be of equal importance with the nursing care given. As in previous years, health instruction only visits, played a rather minor role in the care of medical-surgical cases. In 1961, 92.5 per cent of all medical-surgical visits made were for the purpose of rendering general nursing care to the patient. This percentage varied from 62.1 per cent for those under 25 to 95.4 per cent for those 65 and over. There was little variation between sexes in the health instruction case-load.

Gainfully occupied .....	3,840	3,131	439	204	66	9.2	11.8	5.5	4.0	3.1

**TABLE L. Case - Visit Analysis by Marital Status and Sex, 1959-61**

Marital Status	Male			Female		
	1959	1960	1961	1959	1960	1961
Single .....	Cases	4,936	4,726	4,643	6,171	5,992
	Visits	37,943	34,496	37,866	59,982	70,802
Married .....	Cases	6,314	6,171	6,303	12,495	11,817
	Visits	109,492	124,320	122,082	228,383	225,617
Other .....	Cases	2,262	2,197	2,284	10,134	9,742
	Visits	58,146	56,553	50,418	236,959	243,947
						250,235

**TABLE M. Ratio of Medical - Surgical Nursing Care to Medical - Surgical Health Instruction Visits, by Age, 1961**

Age	Type of visit		Ratio (A) to (B)
	Nursing care (A)	Health instruction (B)	
All ages .....	707,927	57,261	12.4
Under 1 year .....	5,326	5,054	1.1
1- 4 years .....	4,166	2,812	1.5
5-14 " .....	9,018	4,252	2.1
15-24 " .....	6,533	3,184	2.1
25-34 " .....	15,813	5,001	3.2
35-44 " .....	33,745	3,855	8.8
45-54 " .....	46,399	3,590	12.9
55-64 " .....	78,925	5,089	15.5
65-69 " .....	66,615	3,466	19.2
70-74 " .....	103,968	5,316	19.6
75-79 " .....	117,089	6,154	19.0
80-84 " .....	102,831	4,794	21.4
85 and over .....	117,499	4,694	25.0

**TABLE N. International Classification Detailed List Numbers Associated with Diagnostic Groups Used Herein**

No.	Cause	Detailed list numbers	C-List numbers
1	Tuberculosis .....	001-019	C-1, C-2
2	Other infective and parasitic diseases .....	020-138	C-3-C-11
3	Malignant neoplasms .....	140-205	C-12
4	Benign neoplasms .....	210-239	C-13
5	Allergic, endocrine system, metabolic, and nutritional diseases, except diabetes .....	240-254 270-289	C-14, C-15, C-49a, C-49b
6	Diabetes .....	260	C-16
7	Anaemias and other diseases of the blood and blood-forming organs ..	290-299	C-18, C-49c
8	Mental, psychoneurotic, and personality disorders .....	300-326	
9	Diseases of the central nervous system and sense organs .....	330-352	C-19-C-22, C-49d, C-49e
10	Other diseases of the central nervous system and sense organs .....	353-398	
11	Rheumatic fever .....	400-402	C-23
12	Diseases of the heart .....	410-434	C-24, C-25, C-49f
13	Other diseases of the circulatory system .....	440-468	C-26, C-49g, C-49h
14	Diseases of the respiratory system .....	470-527	C-28-C-34 <sup>1</sup>
15	Diseases of the digestive system .....	530-587	C-35-C-40 <sup>1</sup>
16	Diseases of the genito-urinary system .....	590-637	C-41, C-42, C-49i
17	Complications of pregnancy, childbirth, and the puerperium .....	640-652 670-689	C-43b
18	Diseases of the skin and cellular tissue .....	690-716	C-44, C-45
19	Arthritis and rheumatism, except rheumatic fever .....	720-727	C-46
20	Other diseases of the bones and organs of movement .....	730-749	C-47
21	Congenital malformations .....	750-759	C-48 <sup>1</sup>
22	Certain diseases of early infancy .....	760-776	
23	Symptoms, senility, and ill-defined conditions .....	780-795	C-49j
24	Alternative classification of accidents, poisonings, and violence (nature of injury) .....	N800-N999	C-50
25	Other admissions .....	Y00-Y88	-

<sup>1</sup> Categories 763 (pneumonia of newborn) and 764 (diarrhoea of newborn), part of C-31 and C-38 respectively, are included in "Certain diseases of early infancy".

**TABLE O. Analysis of C-List Category C-49 as Shown in Table 5**

	Cause	Detailed list numbers
C-49a	Diseases of other endocrine glands .....	270-277
C-49b	Other metabolic diseases .....	287-289
C-49c	Other diseases of blood and blood-forming organs .....	294-299
C-49d	Disorders of character, behaviour, and intelligence .....	320-326
C-49e	Other diseases of nervous system .....	340-369
C-49f	Other diseases of heart .....	430-434
C-49g	Diseases of arteries .....	450-456
C-49h	Other diseases of circulatory system .....	467-468
C-49i	Other diseases of urinary system .....	600-609
C-49j	Symptoms, senility, and ill-defined conditions .....	780-795
