## METHODOLOGICAL NOTE

### Data Compilation

Under a federal-provincial agreement the registration of births, stillbirths, marriages and deaths is the responsibility of the provinces and Territories under the appropriate Vital Statistics and other related acts. These acts require not only that the events themselves be reported within a prescribed time but also that certain uniform items of statistical information be recorded. Under this agreement microfilm copies of the registrations are supplied to Statistics Canada for compilation of national vital statistics. Subsequent changes to registrations due to errors or omissions are transmitted to Statistics Canada by means of an appropriate document.

In addition, Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia supply machine readable statistical abstracts of the events registered.

### Data Processing

Statistics Canada converts to machine readable form data for the Atlantic provinces and the Territories. In addition Statistics Canada codes the cause of death, and other data for Newfoundland and the Territories.

Prior to tabulation all machine readable vital statistics data are subjected to a computer edit. The computer edit identifies all records where the coded information does not match predetermined values or ranges of values and where certain correlations among coded data items do not meet specified rules. All records so identified, are compared to corresponding registrations.

### Quality and Coverage

The most recent study of coverage was done in 1939 at which time it was estimated that in excess of 90% of all events were recorded. Because of certain subsequent legal developments it is assumed that coverage is now approaching 100%. At the present time studies are underway to assess and quantify changes in quality during coding and keying phases.

Because of operational considerations "cut-off" dates have been established. Records received after the "cut-off" date are not statistically tabulated. The impact of this practice is being assessed.

## NOTE MÉTHODOLOGIQUE

### Compilation des données

À la suite d'un accord fédéral-provincial, c'est aux provinces et aux territoires qu'il incombe d'enregistrer les naissances, les mortinaissances, les mariages et les décès, conformément aux lois concernant la statistique de l'état civil et aux autres lois connexes. En vertu de ces lois, il faut non seulement que ces faits soient déclarés dans un délai prescrit mais aussi que certains éléments d'information statistique soient enregistrés. Aux termes de l'accord, les microfilms des enregistrements sont remis à Statistique Canada qui compile la statistique de l'état civil à l'échelle nationale. Les changements ultérieurs apportés aux enregistrements à la suite d'erreurs ou d'omissions sont communiqués à Statistique Canada au moyen d'un document approprié.

De plus, le Québec, l'Ontario, le Manitoba, la Saskatchewan, l'Alberta et la Colombie-Britannique fournissent des analyses statistiques des renseignements enregistrés qui sont lisibles par une machine.

### Traitement des données

Statistique Canada convertit dans une forme lisible par une machine les données qui proviennent des provinces de l'Atlantique et des Territoires et code en outre les causes des décès et d'autres données provenant de Terre-Neuve et des Territoires.

Avant la totalisation, toutes les données de la statistique de l'état civil lisibles par une machine sont soumises à une vérification mécanographique qui repère tous les enregistrements où les renseignements codés ne correspondent pas aux valeurs ou aux gammes de valeurs prédéterminées et où certaines corrélations entre les éléments des données codées ne satisfont pas aux règles prescrites. Tous les enregistrements repérés au cours de cette vérification sont comparés aux données à partir desquelles ils ont été établis.

### Qualité et champ d'observation

L'étude la plus récente qui existe sur le champ d'observation remonte à 1939, époque où l'on estimait que plus de 90 % de tous les renseignements étaient enregistrés. En raison de certaines réformes légales ultérieures, on présume que le champ d'observation atteint maintenant presque 100 %. Des études sont en cours pour évaluer et quantifier les changements de qualité qui se produisent au cours des stades de codage et d'introduction.

Vu les impératifs de l'exploitation, des dates limites d'inclusion ont été fixées. Les renseignements reçus après ces dates ne sont pas totalisés statistiquement. L'incidence de cette façon d'agir fait actuellement l'objet d'une évaluation.

## INTRODUCTION

The official mortality statistics of Canada are published in the annual report, *Vital Statistics* (Catalogue 84-206). This publication contains tables on deaths, by cause of death, but classified according to the International "Intermediate" ("A") List of "150-cause groups". In order to meet the need for more detailed data on causes of death, two publications, *Causes of Death, Canada, 1950-1960* (Catalogue 84-514) and *Causes of Death, Canada, 1958-1964* (Catalogue 84-519) provided national totals of the numbers of deaths according to the (detailed) three categories and four-digit sub-categories of the 6th and 7th Revisions of the *International Classification of Diseases, Adapted*, which were put into effect in Canada in 1950 and 1958 respectively.

To meet the demand for more current and still further detailed data on causes of death, these publications were converted to a regular annual report beginning with the 1965 data year and the report expanded to include the current years' deaths according to the three- and four-digit categories of the International Classification, by sex and province of residence of the decedent and by sex and five-year age group for Canada. The present report, the 12th such report in this expanded series, is based on the 8th Revision of the *International Classification of Diseases, Adapted* (ICDA) for use in the United States, which was put into effect in Canada in 1969.

The present edition is identical to the previous (1975) edition in both form and content. As indicated in the Introduction to the 1970 report, the reader is cautioned that (1) because of space limitations the titles of disease categories and sub-categories have been arbitrarily condensed, where necessary, from those appearing in the ICDA Manual; (2) as in previous editions the three- and four-digit categories for which there were no deaths in the current year have been excluded. The reader is further cautioned that since there was considerable restructuring of the 8th Revision of the International Classification (ICDA), a direct comparison of categories with previous revisions, either by category number or disease title, cannot, in all cases, be made without reference to the previous classification(s).

Les statistiques des décès au Canada sont publiées dans le rapport, *Statistiques de l'état civil* (n° 84-206 au catalogue). Ce rapport contient des tableaux sur les décès, par cause de décès, suivant la Classification Internationale "Intermédiaire" ("A") en 150 groupes de causes. Afin de répondre aux besoins de données détaillées sur les causes de décès deux publications, *Causes de décès, Canada, 1950-1960* (n° 84-514 au catalogue) et *Causes de décès, Canada, 1958-1964* (n° 84-519 au catalogue) contiennent des tableaux, à l'échelle nationale, des nombres de décès selon les rubriques à trois chiffres et les sous-rubriques à quatre chiffres des 6<sup>e</sup> et 7<sup>e</sup> Révisions de la *Classification internationale des maladies, adaptée*. Ces révisions sont entrées en application au Canada en 1950 et 1958 respectivement.

Pour répondre à la demande de statistiques à la fois récentes et plus détaillées sur les causes de décès, ces rapports sont publiés annuellement depuis 1965. Ont été ajoutés en supplément, les décès selon les rubriques à trois ou quatre chiffres de la Classification internationale par sexe et par province de résidence du décédé ainsi que par sexe et groupes quinquennaux d'âges pour le Canada. Le présent rapport, le 12<sup>e</sup> de cette nouvelle série, est basé sur la 8<sup>e</sup> Révision de la *Classification internationale des maladies, adaptée* (CIMA), en usage aux États-Unis et qui est appliquée au Canada depuis 1969.

La présente édition est identique à la précédente (1975) quant à la forme et au contenu. Comme il a été indiqué dans l'Introduction du rapport 1970, il est nécessaire d'avertir le lecteur (1) qu'en raison des limitations d'espace certaines rubriques et sous-rubriques de titres de maladies du Manuel de la CIMA ont été arbitrairement groupées; (2) comme dans les éditions précédentes, les rubriques à trois ou quatre chiffres pour lesquelles il n'y a pas eu de décès ont été omises. À cause de la restructuration importante de la 8<sup>e</sup> Révision de la Classification internationale (CIMA), le lecteur est prié de ne pas effectuer des comparaisons de rubriques avec les révisions antérieures, que ce soit par numéro de rubrique ou appellation de maladie, comparaisons qui ne peuvent être faites sans référence à la (aux) classification(s) antérieure(s).
