### **Data in Many Forms...**

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

### **How to Obtain More Information**

Inquiries about this publication and related statistics or services should be directed to:

#### **Vital Statistics and Disease Registries Section,**

**Health Division,**

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 991-1772) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)

### **Des données sous plusieurs formes...**

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingué et le système d'extraction de Statistique Canada.

### **Comment obtenir d'autres renseignements**

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

#### **Section de la statistique de l'état civil et des registres de maladies, Division de la santé,**

## Symbols

The following standard symbols are used in Statistics Canada publications:

- ... figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

This publication was prepared under the direction of:

- **David F. Bray**, Director, Health Division
- **John Silins**, Chief, Vital Statistics and Disease Registries Section
- **Joan Lindsay**, Epidemiologist

## Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- ... nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- p nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

Cette publication a été rédigée sous la direction de:

- **David F. Bray**, directeur, Division de la santé
- **John Silins**, chef, Section de la statistique de l'état civil et des registres de maladies
- **Joan Lindsay**, Épidémiologiste

## Introduction

The official mortality statistics for Canada are published in the annual report, *Vital Statistics* (Catalogue 84-206). This publication contains tables on deaths, by cause of death, but classified according to a summary list. In order to meet the need for more detailed data on causes of death, two publications, *Causes of Death, Canada, 1950-1960* (Catalogue 84-514) and *Causes of Death, Canada, 1958-1964* (Catalogue 84-519) provided national totals on the numbers of deaths according to the (detailed) three-digit categories and four-digit sub-categories of the 6th and 7th Revisions of the *International Classification of Diseases*, which were put into effect in Canada in 1950 and 1958 respectively.

To meet the demand for more current and still further detailed data on causes of death, these publications were converted to a regular annual report beginning with the 1965 data year and the report expanded to include the current year's deaths according to the three- and four-digit categories of the International Classification, by sex and province of residence of the decedent and by sex and five-year age groups for Canada. The present report is the 20th such report in this expanded series.

The present report is based on the 9th Revision of the *International Classification of Diseases* (ICD-9) which was put into effect in Canada in 1979. Restructuring of the Classification and some changes in the international underlying cause selection rules have resulted in some break in continuity with previous revisions. Therefore, comparisons of data coded by more than one revision are difficult. Any direct comparisons of ICD-9 categories with previous revisions, either by category number or disease title, should be made with reference to both the ICD-9 and the previous classification(s). In this respect, particular care should be taken with certain categories or sections of the ICD-9, these include; category 558 which contains conditions previously classified to the infectious disease chapter; category 579 which includes some conditions previously found in the chapter on endocrine disorders; categories 390-398 and 424 where assumptions of rheumatic origin are no longer made for certain conditions; categories 401-402, 414 and

Les statistiques officielles concernant la mortalité au Canada sont publiées dans un rapport annuel intitulé *La statistique de l'état civil*, (nº 84-206 au catalogue). Cette publication contient des tableaux sur les décès selon les causes de mortalité, mais elles sont classées d'après une liste sommaire. On pouvait trouver des données plus détaillées sur les causes de mortalité dans deux publications: *Causes de décès, Canada 1950-1960* (nº 84-514 au catalogue) et *Causes de décès, Canada 1958-1964* (nº 84-519 au catalogue), qui fournissaient des totaux nationaux concernant le nombre de décès, selon les catégories détaillées à trois chiffres et les sous-catégories à quatre chiffres des 6<sup>e</sup> et 7<sup>e</sup> Révisions de la *Classification internationale des maladies* (CIM), qui ont été publiées au Canada en 1950 et 1958 respectivement.

Afin de satisfaire à la demande de données plus récentes et encore plus détaillées sur les causes de mortalité, ces publications furent converties, à partir de 1965, en un rapport annuel régulier qui fut élargi pour inclure les décès de l'année visée par catégorie à trois et à quatre chiffres de la CIM, selon le sexe et la province de résidence de la personne décédée, et selon le sexe et les tranches d'âge de cinq ans pour le Canada. Le présent rapport est le 20e de cette série.

Il s'agit en outre du rapport basé sur la 9<sup>e</sup> Révision de la *Classification internationale des maladies* (CIM-9), qui a été publiée au Canada en 1979. La restructuration de la Classification et quelques changements dans les critères internationaux de sélection des causes ont amené une rupture de continuité avec les révisions précédentes. Par conséquent, des comparaisons entre les données sont difficiles. Toute comparaison directe des catégories de la CIM-9 avec celles des autres révisions, que ce soit selon le numéro de la catégorie ou selon le nom de la maladie, devrait être faite en référence à la fois à la CIM-9 et aux classifications précédentes. À cet égard, une attention particulière devrait être portée à certaines catégories ou sections de la CIM-9, notamment la catégorie 558, qui contient des maladies précédemment classées dans le chapitre des maladies infectieuses; la catégorie 579, qui contient certaines maladies que l'on trouvait précédemment dans le chapitre des troubles endocriniens; les catégories 390-398 et 424, où l'on ne suppose plus que certaines maladies sont d'origine rhumatismale; les

429 where changes in the assignment of terms and in the linkage rules have caused a change in the case distribution; the categories for asthma, bronchitis, and emphysema (490-493) where linkage is no longer possible; the section entitled "Pregnancy with Abortive Outcome" (630-639) which now includes ectopic pregnancies; the chapter on perinatal conditions where the age restriction has been changed; and the symptoms chapter where certain symptoms have been removed and placed in other chapters relating to specific systems.

The present edition is identical to the previous (1983) edition in both form and content. As indicated in the Introduction to the 1970 report, the reader is cautioned that: because of space limitations the titles of disease categories and sub-categories have been arbitrarily condensed, where necessary, from those appearing in the ICD-9 manual; as in previous editions the three- and four-digit categories for which there were no deaths in the current year have been excluded. The reader is further cautioned that since there was considerable restructuring of the 9th Revision of the International Classification - ICD-9, a direct comparison of categories with previous revisions, either by category number or disease title, cannot, in all cases, be made without reference to the previous classification(s).

catégories 401, 402, 414 et 429, où des changements dans l'attribution des noms des maladies et dans les critères de regroupement sont à l'origine d'une redistribution des cas; les catégories de l'asthme, de la bronchite et de l'emphysème (490-493), qui sont dorénavant distinctes; la section intitulée "Grossesse aboutissant à l'avortement" (630-639), qui comprend maintenant les grossesses ectopiques; le chapitre sur les affections périnatales, où les groupes d'âge ont été modifiés; et le chapitre sur les symptômes, dont certains ont été placés dans d'autres chapitres relatifs à des syndromes précis.

Cette édition est identique à la précédente (1983), à la fois par sa forme et par son contenu. Comme il a été mentionné dans l'Introduction au rapport de 1970, rappelons que, faute d'espace, les titres des catégories et des sous-catégories de maladies ont été condensés arbitrairement au besoin; en outre, comme dans les éditions antérieures, les catégories auxquelles aucun décès n'a été attribuable durant l'année visée sont exclues. Par ailleurs, comme il y a eu restructuration considérable de la CIM, une comparaison directe de la 9<sup>e</sup> Révision avec les autres, que ce soit selon les catégories ou les titres de maladie, ne peut en aucun cas être faite sans référence aux classifications précédentes.

## **METHODOLOGICAL NOTE**

### **Data Compilation**

Under a federal-provincial agreement the registration of births, stillbirths, marriages and deaths is the responsibility of the provinces and territories under the appropriate Vital Statistics and other related acts. These acts require not only that the events themselves be reported within a prescribed time but also that certain uniform items of statistical information be recorded. Under this agreement microfilm copies of the registrations are supplied to Statistics Canada for compilation of national vital statistics. Subsequent changes to registrations due to errors or omissions are transmitted to Statistics Canada by means of an appropriate document.

In addition, Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia supply machine readable statistical abstracts of the events registered.

### **Data Processing**

Statistics Canada converts to machine readable form data for the Atlantic provinces and the Territories. In addition Statistics Canada codes the cause of death, and other data for Newfoundland and the Territories.

Prior to tabulation all machine readable vital statistics data are subjected to a computer edit. The computer edit identifies all records where the coded information does not match predetermined values or ranges of values and where certain correlations among coded data items do not meet specified rules. All records so identified, are compared to corresponding registrations.

## **NOTE MÉTHODOLOGIQUE**

### **Compilation des données**

À la suite d'un accord fédéral-provincial, c'est aux provinces et aux territoires qu'il incombe d'enregistrer les naissances, les mortinairesses, les mariages et les décès, conformément aux lois concernant la statistique de l'état civil et aux autres lois connexes. En vertu de ces lois, il faut non seulement que ces faits soient déclaré dans un délai prescrit mais aussi que certains éléments d'information statistique soient enregistrés. Aux termes de l'accord, les microfilms des enregistrements sont remis à Statistique Canada qui compile la statistique de l'état civil à l'échelle nationale. Les changements ultérieurs apportés aux enregistrements à la suite d'erreurs ou d'omissions sont communiqués à Statistique Canada au moyen d'un document approprié.

De plus, le Québec, l'Ontario, le Manitoba, la Saskatchewan, l'Alberta et la Colombie-Britannique fournissent des analyses statistiques des renseignements enregistrés qui sont lisibles par une machine.

### **Traitemennt des données**

Statistique Canada convertit dans une forme lisible par une machine les données qui proviennent des provinces de l'Atlantique et des Territoires et code en outre les causes des décès et d'autres données provenant de Terre-Neuve et des Territoires.

Avant la totalisation, toutes les données de la statistique de l'état civil lisibles par une machine sont soumises à une vérification mécanographique qui repère tous les enregistrements où les renseignements codés ne correspondent pas aux valeurs ou aux gammes de valeurs prédéterminées et où certaines corrélations entre les éléments des données codées ne satisfont pas aux règles prescrites. Toutes les données ainsi identifiées sont comparées aux bulletins correspondants.

## **Quality and Coverage**

The most recent study of completeness of coverage was done in 1939 at which time it was estimated that in excess of 90% of all events were registered. Because of subsequent administrative and legal developments it is assumed that coverage is nearly 100%. Reports<sup>1,2</sup> have been prepared for 1976 and 1979 which present quality measurements with respect to major demographic and medical characteristics of vital data. The 1976 report is available upon request and the 1979 report will be available when finalized.

Because of operational considerations "cut-off" dates have been established. Records received after the "cut-off" date are not statistically tabulated. The impact of this practice is being assessed.

## **Qualité et champ d'observation**

La dernière évaluation de la couverture de l'enquête remonte à 1939 et, à cette époque, il a été estimé que plus de 90% de tous les cas avaient été relevés. Par suite de modifications administratives et législatives qui ont été apportées de 100%. Il existe deux rapports<sup>1,2</sup> sur les données de 1976 et 1979 qui présentent une évaluation de la qualité des principales caractéristiques démographiques et médicales de l'état civil. On peut se procurer sur demande le rapport de 1976 et le rapport de 1979 sera disponible dès qu'on disposera de la version finale.

Vu les impératifs de l'exploitation, des dates limites d'inclusion ont été fixées. Les renseignements reçus après ces dates ne sont pas totalisés statistiquement. L'incidence de cette façon d'agir fait actuellement l'objet d'une évaluation.
