Note

This and other government publications may be purchased from local authorized agents and other community bookstores or by mail order.

Mail orders should be sent to Publications Distribution, Statistics Canada, Ottawa, K1A 0T6, or to Publishing Centre, Supply and Services Canada, Ottawa, K1A 0S9.

Inquiries about this publication should be addressed to:

Vital Statistics and Disease Registries Section,
Health Division,

Statistics Canada, Ottawa, K1A 0T6 (telephone: 995-9593) or to a local office of the bureau's User Advisory Services Division:

St. John's (Nfld.)	(726-0713)
Halifax	(426-5331)
Montréal	(283-5725)
Ottawa	(992-4734)
Toronto	(966-6586)
Winnipeg	(949-4020)
Regina	(569-5405)
Edmonton	(425-5052)
Vancouver	(666-3695)

Toll-free access to the regional statistical information service is provided in Nova Scotia, New Brunswick, and Prince Edward Island by telephoning 1-800-565-7192. Throughout Saskatchewan, the Regina office can be reached by dialing 1-800-667-3524, and throughout Alberta, the Edmonton office can be reached by dialing 1-800-222-6400.

Nota

On peut se procurer cette publication, ainsi que toutes les publications du gouvernement du Canada, auprès des agents autorisés locaux, dans les librairies ordinaires ou par la poste.

Les commandes par la poste devront parvenir à Distribution des publications, Statistique Canada, Ottawa, K1A 0T6, ou à Imprimerie et édition, Approvisionnement et services Canada, Ottawa, K1A 0S9.

Toutes demandes de renseignements sur la présente publication doivent être adressées à:

Section de la statistique de l'état civil et des registres de maladies,
Division de la santé,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 995-9593) ou à un bureau local de la Division de l'assistance-utilisateurs situé aux endroits suivants:

St. John's (T. - N.)	(726-0713)
Halifax	(426-5331)
Montréal	(283-5725)
Ottawa	(992-4734)
Toronto	(966-6586)
Winnipeg	(949-4020)
Regina	(569-5405)
Edmonton	(425-5052)
Vancouver	(666-3695)

On peut obtenir une communication gratuite avec le service régional d'information statistique de la Nouvelle-Écosse, du Nouveau-Brunswick et de l'Île-du-Prince-Édouard en composant 1-800-565-7192. En Saskatchewan, on peut communiquer avec le bureau régional de Regina en composant 1-800-667-3524, et en Alberta, avec le bureau d'Edmonton au numéro 1-800-222-6400.

VITAL STATISTICS TERMS AND DEFINITIONS

A summary of symbols, definitions, populations, and the method of computing rates used in this report are given below.

SYMBOLS

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- * or 0.0 a rate less than 0.1.
- r figures revised since previous report.
- P provisional.

DEFINITIONS

Population:

De jure (resident) population as enumerated in Census years or estimated for inter-censal years.

1972-1975 - June 1 estimates.

1921-1971, 1976 - Census or revised estimates.

Births:

Unless otherwise indicated, infants born alive, i.e., excluding stillbirths.

Stillbirths:

Unless otherwise indicated, foetal deaths of 28 or more weeks' gestation.

Deaths:

Unless otherwise indicated, exclude stillbirths.

Infant - Deaths under 1 year of age.

Neonatal - Deaths under 28 days (4 weeks) of age.

Post-neonatal - Deaths between 4 weeks and 1 year of age.

Maternal - Deaths due to delivery and complications of pregnancy, childbirth and the puerperium (Categories 630-678 International List).

Perinatal - Foetal deaths of 28 or more weeks' gestation plus infant deaths under 7 days (1 week) of age.

Natural increase:

Excess of births over deaths.

Rates:

Crude - Birth, marriage, death and natural increase rates per 1,000 population.

Total births:

Live births and stillbirths.

Age:

Completed ages in years, months, etc.

Average - Arithmetic mean.

Median - Age above and below which half of the total events occur.

RATES OR RATIOS

(Unless otherwise indicated, computed as follows)

Stillbirths:	per	1,000 live births.
Deaths:	"	1,000 population.
Infant	"	1,000 live births.
Neonatal	"	1,000 " "
Post-neonatal	"	1,000 " "
Maternal	"	10,000 " "
Perinatal	"	1,000 total births.

Causes of death:

All causes	per	100,000 population.
Infant	"	100,000 live births.
Neonatal	"	100,000 " "
Maternal	"	100,000 " "

Marriages: " 1,000 population.

Divorces: " 100,000 "

Natural increase: " 1,000 "

TERMES DÉMOGRAPHIQUES ET DÉFINITIONS

Un sommaire des signes conventionnels, définitions et populations et la méthode utilisée pour calculer les taux du présent rapport paraît ci-dessous.

SIGNES CONVENTIONNELS

- .. non disponible.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- infimes.
- * ou 0,0 taux inférieur à 0.1.
- r rectifiés depuis le rapport précédent.
- P provisoire.

DÉFINITIONS

Population:

Population résidente dénombrée aux années de recensement ou estimée aux années intercensales.

1972-1975 - Estimations du 1^{er} juin.

1921-1971, 1976 - Estimations du recensement ou rectifiées.

Natalité:

Sauf indication contraire, il s'agit d'enfants nés vivants (sans la mortinatalité).

Mortinatalité:

Sauf indication contraire, décès du fœtus de 28 semaines ou plus.

Mortalité générale:

Sauf indication contraire, ce terme exclut la mortinatalité.

Infantile - Décès des moins de 1 an.

Néonatale - Décès des moins de 28 jours (4 semaines).

Post-néonatale - Décès d'enfants de 4 semaines à 1 an.

Maternelle - Décès dus à l'accouchement et aux complications de la grossesse, de l'accouchement et des suites de couches (rubriques 630-678 de la liste internationale).

Périnatale - Décès des fœtus de 28 semaines ou plus, plus les décès d'enfants âgés de moins de 7 jours (1 semaine).

Accroissement naturel:

Excédent des naissances sur les décès.

Taux:

Bruts - Taux de natalité, de nuptialité, de mortalité et d'accroissement naturel pour 1,000 habitants.

Naissances:

Naissances vivantes et mortinaissances.

Âge:

Âge en années, mois revolus.

Moyen - Moyenne arithmétique.

Médian - Âge au-dessous duquel surviennent la moitié des événements.

TAUX OU RAPPORTS

(Sauf indication contraire, ils sont calculés ainsi)

Mortinatalité:	pour	1,000 naissances vivantes.
Mortalité:	"	1,000 habitants.
Infantile	"	1,000 naissances vivantes.
Néonatale	"	1,000 " "
Post-néonatale	"	1,000 " "
Maternelle	"	10,000 " "
Périnatale	"	1,000 naissances totales.

Causes de mortalité:

Toutes les causes	pour	100,000 habitants.
Infantile	"	100,000 naissances vivantes.
Néonatale	"	100,000 " "
Maternelle	"	100,000 " "

Nuptialité: " 1,000 habitants.

Divortialité: " 100,000 "

Accroissement naturel: " 1,000 "

PREFACE

This report presents the 1977 data on births for Canada and the provinces and is the latest in a continuing series of specialized vital statistics reports. Because of the delays experienced with source data, the previous issue of this report was a combined publication for the two years 1975 and 1976. A revised version of a brief methodological note describing the procedures of data compilation, computation technique and limitation of some of the data has been included in this report.

PRÉFACE

La présente publication est la plus récente d'une série ininterrompue sur la statistique de l'état civil et porte sur les naissances qui ont eu lieu en 1977, au Canada et dans les provinces. En raison des retards qui s'étaient produits au moment du traitement des données de base, l'édition précédente de la présente publication portait sur les années 1975 et 1976. Ce bulletin comprend une version révisée d'une brève note décrivant les méthodes de compilation des données, les techniques de calcul et les limites de certaines données.

15. Naissances vivantes, selon le mois, Canada et provinces, 1973-1977	40
16. Mortinatalité et rapports, Canada et provinces, 1922-1977 par mois, 1977	41
17. Naissances vivantes, selon le rang des naissances et le lieu de domicile de la mère, comtés, divisions de recensement et districts, 1977	43
18. Naissances vivantes, selon l'âge et le lieu de domicile de la mère, comtés, divisions de recensement et districts, 1977	48

METHODOLOGICAL NOTE

The source of vital statistics data in Canada is the universal system of registration of births, marriages, deaths and stillbirths. These are recorded and accumulated by registrars of vital statistics in each province and territory. Under existing Federal-Provincial agreements, microfilm copies of registration documents on births, marriages, deaths and stillbirths are made available to Statistics Canada by the provincial and territorial offices for compilation of aggregate national statistics.

Mode of Data Availability

The data for Newfoundland, Prince Edward Island, New Brunswick, Nova Scotia and the Territories of Yukon and Northwest, are transformed into machine readable form at Statistics Canada. Data from other provinces are supplied in machine readable form by the provincial offices of vital statistics. Editing and processing of data to generate the necessary tabulations are accomplished by means of specialized routines developed at Statistics Canada.

Mode of Dissemination

The tabulations which are often requested and are of increasing demand are published in five annual reports viz: (1) *Births*, Catalogue 84-204; (2) *Marriages and Divorces*, Catalogue 84-205; (3) *Deaths*, Catalogue 84-206; (4) *The Principal Vital Statistics by Local Areas*, Catalogue 84-207; (5) *Causes of Death*, Catalogue 84-203. Historical as well as current information is also available through Statistics Canada's computerized data base system CANSIM (Canadian Socio-Economic Information Management System). In addition, some unpublished tabulations are stored on microfilm and are available on demand. Special tabulations may also be generated from the data files and supplied upon request on a cost-recovery basis.

Limitations of Data

It was observed that the source data on births for the province of Quebec for the year 1977 contained some excess registrations resulting in slightly inflated counts of births for the province. A minor adjustment was found necessary for the purposes of deriving global rates; the adjusted counts have been considered for Tables 1 and 6. With respect to other tables the unadjusted counts have been utilized.

NOTE MÉTHODOLOGIQUE

Au Canada, le système universel d'enregistrement des naissances, des mariages, des décès et des mortinaissances est la principale source des données sur l'état civil, qui sont enregistrées et conservées par les registraires de la statistique de l'état civil des provinces et des territoires. En vertu des ententes fédérales-provinciales existantes, les microfilms des documents d'enregistrement des naissances, des mariages, des décès et des mortinaissances sont mis à la disposition de Statistique Canada par les bureaux provinciaux et territoriaux et le Bureau se charge de compiler les données nationales sur l'état civil.

Support d'information

Les données provenant de Terre-Neuve, de l'Île-du-Prince-Édouard, du Nouveau-Brunswick, de la Nouvelle-Écosse et des territoires du Yukon et du Nord-Ouest sont traduites sous une forme lisible à la machine par Statistique Canada. Dans les autres provinces, ce sont les bureaux provinciaux de l'état civil qui se chargent de ce travail. Le contrôle et le traitement des données permettant de produire les totalisations nécessaires se font à l'aide des programmes spécialisés conçus à Statistique Canada.

Mode de diffusion

Les totalisations pour lesquelles il y a une demande de plus en plus forte sont publiées dans les cinq bulletins annuels suivants: (1) *Naissances*, n° 84-204 au catalogue; (2) *Mariages et divorces*, n° 84-205 au catalogue; (3) *Décès*, n° 84-206 au catalogue; (4) *Principales statistiques de l'état civil selon la localité*, n° 84-207 au catalogue; et (5) *Causes de décès*, n° 84-203 au catalogue. On peut aussi obtenir des données chronologiques ou courantes grâce à la base de données informatisée de Statistique Canada, CANSIM (Système canadien d'information socio-économique). On peut aussi se procurer sur demande des totalisations non publiées enregistrées sur microfilms et des totalisations spéciales établies à partir des fichiers originaux de données en acquittant les frais.

Limites des données

On a constaté que les données de base sur les naissances de l'année 1977 au Québec contenaient un surplus d'enregistrements dû au nombre artificiellement accru des naissances dans la province. On a dû procéder à un petit ajustement pour obtenir des taux globaux et on a ensuite établi les tableaux 1 et 6 à partir des nombres corrigés. En ce qui concerne les autres tableaux, on a utilisé des nombres non corrigés.

The total births for the province of Newfoundland for the year 1977 has also been adjusted to take account of the estimated delayed receipt of registrations.

Users are advised to take a careful look at the footnotes to each tabulation and keep the limitations of data in perspective in analysing the levels and trends.

Quality of Data

As reported in the previous issue of this report, a quality assessment study was conducted on a sample of 1976 birth records. A stratified sampling procedure based on the mode of data availability was adopted for selecting the sample. With the exception for one stratum, 14 characteristics including date of birth, residence of the mother, number of children born, mothers age, marital status of the mother, birthweight and period of gestation were looked into. The main aspect studied in this round of enquiry was the measurement of the processing error based on the sample records of births which were independently reprocessed and compared with the production records on the clean data base. The details of the procedure adopted in this study can be obtained on request.

The results of the study revealed that though the quality of birth data was generally high, there was need for improvement with regard to some characteristics. The total error rate measured on the basis of adjudicated mismatches for the core characteristics, excluding the three pertaining to the "number of children born", was 2.7 per 100 records, with none of the individual characteristics exceeding an error rate of 1%.

Among the fields eliciting information on the number of children live born, stillborn and total, a significant error rate was registered for the field on the total number of children; the main contributing factor to this was the considerable non-response or missing information. The number live born was relatively more accurate than either the "number stillborn" or the "number total born". Hence, based on this assessment the birth order data based on live births are to be preferred to those based on total births. Other characteristics which were affected slightly, mainly due to non-response, were "duration of pregnancy" and "birthweight". Further study with respect to these characteristics is needed in order to pinpoint accurately the effect this would have on the profile revealed by the tabulations in the annual reports. However, regional differences and the differences due to the mode of receiving data did exist to a limited extent and continued efforts will be made in the next round of studies to identify specifically the areas of concern in order to further improve the quality of data and tabulations.

Afin de tenir compte des retards estimés de réception des enregistrements, le nombre total des naissances dans la province de Terre-Neuve a également fait l'objet d'un ajustement pour l'année 1977.

Les utilisateurs sont priés d'examiner attentivement les renvois au bas de chaque tableau et de ne pas oublier les limites des données lorsqu'ils analyseront les niveaux et les tendances.

Qualité des données

Comme l'indique le bulletin précédent, on a effectué une étude pour évaluer la qualité d'un échantillon de données sur les naissances qui ont eu lieu en 1976. On a utilisé la méthode du sondage stratifié pour choisir l'échantillon. Sauf une strate, 14 caractéristiques, dont la date de naissance, le lieu de domicile de la mère, le nombre d'enfants nés, l'âge de la mère, l'état matrimonial de la mère, le poids à la naissance et la période de gestation, ont été examinées. Cette étape consistait surtout à mesurer les erreurs de traitement à partir de l'échantillon de données sur les naissances après lui avoir fait subir un nouveau traitement indépendant et l'avoir comparé aux données figurant dans la base épurée de données. On peut obtenir sur demande des renseignements supplémentaires sur la méthode adoptée au cours de cette étude.

Les résultats de l'étude révèlent que, bien que les données sur les naissances soient généralement de bonne qualité, il faut améliorer certaines caractéristiques. Le taux d'erreur mesuré en fonction des erreurs d'assortiment des principales caractéristiques, à l'exclusion des trois caractéristiques relatives au "nombre d'enfants nés" s'établissait à 2.7 pour 100 fichiers, le taux d'erreur d'aucune des caractéristiques n'excédant 1 %.

Un taux d'erreur important a été enregistré pour le nombre total d'enfants nés, nés vivants et mort-nés; ce fait est attribuable au taux considérable de non-réponse et aux renseignements manquants. Le nombre d'enfants nés vivants est relativement plus précis que le "nombre d'enfants mort-nés" ou le "nombre total d'enfants nés". C'est pourquoi, selon cette évaluation, les données sur le rang des naissances fondées sur les naissances vivantes sont préférables à celles qui sont fondées sur l'ensemble des naissances. Parmi les autres caractéristiques qui ont été touchées légèrement, surtout en raison des non-réponses, figurent "la durée de la grossesse" et le "poids à la naissance". Il faudra procéder à d'autres études en ce qui concerne ces caractéristiques pour préciser l'effet que cela aurait sur le profil révélé par les totalisations dans les publications annuelles. Cependant, il existe dans une certaine mesure des disparités entre les régions et des différences dues au mode d'obtention des données, et on continuera de s'efforcer au cours des prochaines études de déterminer les raisons des erreurs afin d'améliorer davantage la qualité des données et des totalisations.

¹ Adjusted for expected undercount. - On a fait un ajustement, parce que le compte était censé être trop bas.

² Adjusted for estimated overcount due to duplication. - On a fait un ajustement, parce que le compte était censé être trop grand à cause de la duplication.

¹ Data for Newfoundland not available. - Les données de Terre-Neuve ne sont pas disponibles.

² Data for Yukon and Northwest Territories not available prior to 1951 or for the period 1952-1955. - Les données d'avant 1951 du Yukon et des Territoires du Nord-Ouest et de la période 1952-1955 sont inconnues également.

³ Residual births for which ages of mother were not available, have been proportionately distributed in deriving various rates. - On a fait une répartition proportionnelle des naissances résiduelles, pour lesquelles l'âge de la mère n'était pas disponible, afin de calculer des taux divers.

¹ Excluding Newfoundland. - Terre-Neuve exclue.

² The order of birth takes into account all children born alive to the mother. - Le rang est défini en tenant compte de tous les enfants nés vivants de la mère.

³ Unadjusted for estimated overcount due to duplication. - Aucun ajustement pour le compte estimé trop grand à cause de la duplication.
