## Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

## How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Vital Statistics and Health Status Section,  
Health Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 991-1772) or to the Statistics Canada reference centre in:

|            |            |                |            |
|------------|------------|----------------|------------|
| St. John's | (772-4073) | Sturgeon Falls | (753-4888) |
| Halifax    | (426-5331) | Winnipeg       | (949-4020) |
| Montréal   | (283-5725) | Regina         | (359-5405) |
| Ottawa     | (990-8116) | Edmonton       | (420-3027) |
| Toronto    | (973-6586) | Vancouver      | (666-3691) |

Toll-free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional reference centres.

## Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingué et le système d'extraction de Statistique Canada.

## Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section de la statistique de l'état civil et de la santé,  
Division de la santé,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 991-1772) ou au centre de consultation de Statistique Canada à:

|            |            |                |            |
|------------|------------|----------------|------------|
| St. John's | (772-4073) | Sturgeon Falls | (753-4888) |
| Halifax    | (426-5331) | Winnipeg       | (949-4020) |
| Montréal   | (283-5725) | Regina         | (359-5405) |

## Symbols

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

## Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- p nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

## NOTE ON CANSIM

Data in this publication are available from CANSIM (Canadian Socio-Economic Information Management System) via terminal, on computer print-out or in machine readable form.

This publication was prepared under the direction of:

- **David F. Bray**, Director, Health Division
- **John Silins**, Chief, Vital Statistics and Health Status Section
- **K.G. Basavarajappa**, Associate Director of Demography, Health Division

## NOTE CONCERNANT CANSIM

Les données de la présente publication sont disponibles de CANSIM (Système canadien d'information socio-économique) par voie de terminal, sur imprimés mécanographiques ou sous une forme assimilable par machine.

Cette publication a été rédigée sous la direction de:

- **David F. Bray**, directeur, Division de la santé
- **John Silins**, chef, Section de la statistique de l'état civil et de la santé
- **K.G. Basavarajappa**, directeur associé de la démographie, Division de la santé

## METHODOLOGICAL NOTE

This issue is the seventh in a series of combined reports on births and deaths which brings together, in one volume, mainly the demographic aspects of fertility and mortality data; these data were available in the previous issues of the reports under Catalogue Nos. 84-204 and 84-206. This issue includes the data, for Canada and the Provinces, for the year 1984. The format of the presentation of the tabulations follows the same pattern as that of the previous year.

The source of vital statistics data in Canada is the universal system of registration of births, marriages, deaths and stillbirths. These are recorded and accumulated by registrars of vital statistics in each province and territory. Under existing Federal-Provincial agreements, microfilm copies of registration documents on births, marriages, deaths and stillbirths are made available to Statistics Canada by the provincial and territorial offices for compilation of aggregate national statistics. The source of divorce data is the Central Divorce Registry maintained in the Department of Justice.

### Mode of Data Availability

The births, marriages, deaths and stillbirths data for Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick and the Territories of Yukon and Northwest, are transformed into machine readable form at Statistics Canada. Data from other provinces are supplied in machine readable form by the provincial offices of vital statistics. Editing and processing of data to generate the necessary tabulations are accomplished by means of specialized routines developed at Statistics Canada.

The data on divorce are made available once a year, in machine readable form by the Department of Justice. The tabulation are prepared at Statistics Canada.

### Mode of Dissemination

Selected tabulations are published in the annual and quinquennial reports viz:

#### Catalogue

84-203 Causes of Death  
84-204 Births and Deaths  
84-205 Marriages and Divorces  
84-206 Mortality — Summary List of Causes

84-542 Principal vital statistics by local areas (quinquennial).

## NOTE MÉTHODOLOGIQUE

Le présent numéro est le septième d'une série de publications combinées sur les naissances et les décès réunissant en un seul volume surtout les aspects démographiques des données sur la fécondité et la mortalité; ces données paraissaient auparavant dans les publications no 84-204 et 84-206 au catalogue. Le présent numéro porte sur les données de 1984 pour le Canada et les provinces. La présentation des totalisations est semblable à celles des années antérieures.

Au Canada, le système universel d'enregistrement des naissances, des mariages, des décès et des mortinairesses est la principale source des données sur l'état civil, qui sont enregistrées et conservées par les registraires de la statistique de l'état civil des provinces et des territoires. En vertu des ententes fédérales-provinciales existantes, les microfilms des documents d'enregistrement des naissances, des mariages, des décès et des mortinairesses sont mis à la disposition de Statistique Canada par les bureaux provinciaux et territoriaux et le Bureau se charge de compiler les données nationales sur l'état civil. Les données sur le divorce proviennent du Bureau central d'enregistrement des divorces du ministère de la Justice.

### Support d'information

Les données sur la nuptialité, la mortalité, la natalité et la mortinatalité pour Terre-Neuve, l'Île-du-Prince-Édouard, le Nouveau-Brunswick et les Territoires du Yukon et du Nord-Ouest sont traduites sous une forme lisible à la machine par Statistique Canada. Dans les autres provinces, ce sont les bureaux provinciaux de l'état civil qui se chargent de ce travail. Le contrôle et le traitement des données permettant de produire les totalisations nécessaires se font à l'aide des programmes spécialisés conçus à Statistique Canada.

Une fois par année, le ministère de la Justice publie les données sur le divorce sous une forme lisible par une machine. Statistique Canada établit les totalisations.

### Mode de diffusion

Les totalisations choisies sont publiées dans les rapports annuels et quinquennaux:

#### Catalogue

84-203 Causes de décès  
84-204 Naissances et décès  
84-205 Mariages et divorces  
84-206 Mortalité — Liste sommaire des causes

84-542 Principales statistiques de l'état civil selon la localité (quinquennial).

Historical as well as current information is also available through Statistics Canada's computerized data base system, CANSIM (Canadian Socio-Economic Information Management System). In addition, some unpublished tabulations are stored on microfilm and are available on demand. Special tabulations may also be generated from the data files and supplied upon request on a cost-recovery basis.

### **Limitations of Data**

Special limitations of data have been observed for some of the cross-classifications required for the tabulations. These limitations are enumerated in the footnotes to the tables.

Users are advised to take a careful look at the footnotes to each tabulation and keep the limitations of data in perspective in analysing the levels and trends.

### **Quality of Data**

A quality assessment study was carried out on a sample of 1981 records. A stratified sampling procedure, representing different modes of data availability for processing, was adopted for selecting the sample. The main aspect studied in this round of enquiry was the measurement of the processing errors based on the sample records of births and deaths, which were independently processed and compared with the production records on the clean data base. A number of core characteristics were investigated: relating to births, they included child's date of birth, kind of birth, duration of pregnancy, children liveborn, parents married to each other, marital status of mother, birthdate of mother, birthdate of father, and order of birth; relating to deaths, they included birthdate, age, birthplaces of mother and father, marital status, date of death, date of certification and birthplace of deceased. The details of the study can be obtained from the Vital Statistics and Health Status Section, Health Division.

On peut aussi obtenir des données chronologiques ou courantes grâce à la base des données informatisée de Statistique Canada, CANSIM (Système canadien d'information socio-économique). On peut aussi se procurer sur demande des totalisations non publiées enregistrées sur microfilms et des totalisations spéciales établies à partir des fichiers originaux de données en acquittant les frais.

### **Limites des données**

On a noté que les données présentaient des limites particulières dans le cas de certains des classements recoupés requis pour les totalisations. Ces limites sont précisées dans les notes au bas des tableaux.

Les utilisateurs sont priés d'examiner attentivement les notes au bas de chaque tableau et de ne pas oublier les limites des données lorsqu'ils analyseront les niveaux et les tendances.

### **Qualité des données**

On a effectué une étude pour évaluer la qualité d'un échantillon de données de 1981. On a utilisé la méthode du sondage stratifié pour choisir l'échantillon. Cette étape consistait surtout à mesurer les erreurs de traitement à partir de l'échantillon de données sur les naissances et les décès après lui avoir fait subir un nouveau traitement indépendant et l'avoir comparé aux données figurant dans la base épurée de données. On a examiné un certain nombre de caractéristiques principales qui, pour ce qui est des naissances, comprennent la date de naissance de l'enfant, le genre de naissance, la durée de la grossesse, le nombre d'enfants nés vivants, le mariage des deux parents l'un à l'autre, l'état matrimonial de la mère, la date de naissance de la mère et du père, et l'ordre des naissances; en ce qui concerne les décès, elles incluent la date de naissance, l'âge et le lieu de naissance du père et de la mère, ainsi que l'état matrimonial, la date du décès, la date de déclaration du décès et le lieu de naissance du défunt. On peut obtenir des renseignements sur l'étude en s'adressant à la Section de la statistique de l'état civil et de la santé, Division de la santé.

## **DEFINITIONS**

### **Population**

De jure (resident) population as enumerated in census years or estimated for inter-censal years.

### **Births**

Unless otherwise indicated, infants born alive, i.e., excluding stillbirths.

### **Stillbirths**

Unless otherwise indicated, foetal deaths of 28 or more weeks' gestation.

### **Deaths**

Unless otherwise indicated, excludes stillbirths.

Infant: deaths under 1 year of age.

Neonatal: deaths under 28 days (4 weeks) of age.

Post-neonatal: deaths between 4 weeks and 1 year of age.

Maternal: deaths due to delivery and complications of pregnancy, childbirth and the puerperium (Categories 630-676 of the International List).

Perinatal: foetal deaths of 28 or more weeks' gestation plus infant deaths under 7 days (1 week) of age.

### **Natural Increase**

Excess of births over deaths.

### **Rates**

Crude: birth, marriage, death and natural increase rates per 1,000 population.

Age-specific fertility: birth rate per 1,000 women in the respective age interval.

Total fertility: sum of age-specific fertility rates. When five year rates are used, the sum has to be multiplied by five.

General fertility: birth rate per 1,000 women 15-49 years.

Marital fertility: number of births per 1,000 married women, in the respective age interval.

## **DÉFINITIONS**

### **Population**

Population résidente dénombrée aux années de recensement ou estimée aux années intercensales.

### **Natalité**

Sauf indication contraire, il s'agit d'enfants nés vivants (sans la mortinatalité).

### **Mortinatalité**

Sauf indication contraire, décès du foetus de 28 semaines ou plus.

### **Mortalité générale**

Sauf indication contraire, ce terme exclut la mortinatalité.

Infantile: décès de moins de 1 an.

Néonatale: décès de moins de 28 jours (4 semaines).

Post-néonatale: décès d'enfants de 4 semaines à 1 an.

Maternelle: décès dus à l'accouchement et aux complications de la grossesse, de l'accouchement et des suites de couches (rubriques 630-676 de la liste internationale).

Périnatale: décès des foetus de 28 semaines ou plus, plus les décès d'enfants âgés de moins de 7 jours (1 semaine).

### **Accroissement naturel**

Excédent des naissances sur les décès.

### **Taux**

Bruts: taux de natalité, de nuptialité, de mortalité et d'accroissement naturel pour 1,000 habitants.

Fécondité par âge: taux de natalité pour 1,000 femmes du groupe d'âges concerné.

Fécondité totale: somme des taux de fécondité par groupe d'âge. Lorsqu'il s'agit de taux pour cinq ans, il faut multiplier la somme par cinq.

Global de fécondité: taux de natalité pour 1,000 femmes âgées de 15 à 49 ans.

Fécondité des femmes mariées: nombre de naissances pour 1,000 femmes mariées du groupe d'âge concerné.

**Gross reproduction:** average number of live daughters that would be born to a hypothetical female birth cohort if subjected to current female age-specific fertility rates, and assuming that mortality before age 50 is zero.

### Net Reproduction Rate

Average number of live daughters that are expected to be born to a hypothetical female birth cohort if subjected to current female age-specific fertility rates and survival probabilities.

### Age-specific Cohort Fertility Rate

Birth rate per 1,000 women born in the same chronological period.

### Total Births

Live births and stillbirths.

### Age

Completed ages in years, months, etc.

Average: arithmetic mean.

Median: age above and below which half of the total events occur.

### RATES OR RATIOS

Unless otherwise indicated, computed as follows:

|                   |     |                     |
|-------------------|-----|---------------------|
| Live births:      | per | 1,000 population.   |
| Stillbirths:      | "   | 1,000 live births.  |
| Natural increase: | "   | 1,000 population.   |
| Deaths:           | "   | 1,000 population.   |
| Infant            | "   | 1,000 live births.  |
| Neonatal          | "   | 1,000 " "           |
| Post-neonatal     | "   | 1,000 " "           |
| Maternal          | "   | 10,000 " "          |
| Perinatal         | "   | 1,000 total births. |

**Reproduction brute:** moyenne de filles vivantes qui seraient nées d'une cohorte de naissances féminines hypothétiques si elles étaient sujettes aux taux courants de fécondité féminine suivant l'âge et en supposant que la mortalité avant l'âge 50 ans soit zéro.

### Taux de reproduction nette

Moyenne de filles vivantes qui seraient nées d'une cohorte de naissances féminines hypothétiques si elles étaient sujettes aux taux courants de fécondité féminine suivant l'âge et les conditions de mortalité.

### Taux de fécondité par âge selon les cohortes

Taux de natalité pour 1,000 femmes nées pendant la même période.

### Naissances

Naissances vivantes et mortinaissances.

### Âge

Âge en années, mois révolus.

Moyen: moyenne arithmétique.

Médian: âge au-dessus et au-dessous duquel surviennent la moitié des événements.

### TAUX OU RATIOS

Sauf indication contraire, ils sont calculés ainsi:

|                        |      |                            |
|------------------------|------|----------------------------|
| Naissances vivantes:   | pour | 1,000 habitants.           |
| Mortinatalité:         | "    | 1,000 naissances vivantes. |
| Accroissement naturel: | "    | 1,000 habitants.           |
| Mortalité:             | "    | 1,000 habitants.           |
| Infantile              | "    | 1,000 naissances vivantes. |
| Néonatale              | "    | 1,000 " "                  |
| Post-néonatale         | "    | 1,000 " "                  |
| Maternelle             | "    | 10,000 " "                 |
| Périnatale             | "    | 1,000 naissances totales.  |

## FOOTNOTES

### Table 1.

- (1) Rate per 1,000 population.
- (2) Rate per 1,000 live births.
- (3) Rate per 1,000 total births.
- (4) Rate per 1,000 live births and specified foetal deaths.
- (5) Ratio of the number of stillbirths in a year to the number of live births in the same year.
- (6) Rate per 10,000 live births.
- (7) Total does not add due to cases where province of residence was not reported, two cases in 1983.
- (8) Rate per 100 live births.

### Table 4.

- (1) Excluding Newfoundland.

### Table 5.

- (1) Excluding Newfoundland.
- (2) Residual births for which ages of mother were not available, have been proportionately distributed in deriving various rates.
- (3) Life table values for the years 1980-1982 for Canada and Provinces have been used to derive survival probabilities.
- (4) Standardized to Canadian 1971 female population.

### Table 6.

- (1) Excluding Newfoundland.
- (2) Live births per 1,000 married women in respective age groups.

### Tables 7 and 8.

- (1) Excluding Newfoundland.

### Table 10.

- (1) Excluding Newfoundland.
- (2) These counts might be slightly higher due to the unmatched multiple births being included in the singles category.

### Table 11.

- (1) Excluding Newfoundland.
- (2) The order of birth takes into account all children born alive to the mother.

### Tables 12, 13 and 14.

- (1) Excluding Newfoundland.
- (2) Based on stated birthweights.

### Table 15.

- (1) The age-specific cohort fertility rates in this table have been derived from the "period" rates available for the years beginning 1921 and are thus subject to some inherent limitations.

## NOTES

### Tableau 1.

- (1) Taux pour 1,000 habitants.
- (2) Taux pour 1,000 naissances vivantes.
- (3) Taux pour 1,000 naissances totales.
- (4) Taux pour 1,000 naissances vivantes et certains décès de foetus.
- (5) Ratio entre le nombre de mortinaissances au cours d'une année et le nombre de naissances vivantes pendant la même année.
- (6) Taux pour 10,000 naissances vivantes.
- (7) Le total n'additionne pas car pour des cas la province de résidence n'a pas été déclarée, deux cas en 1983.
- (8) Taux pour 100 naissances vivantes.

### Tableau 4.

- (1) Sauf Terre-Neuve.

### Tableau 5.

- (1) Sauf Terre-Neuve.
- (2) On a fait une répartition proportionnelle des naissances restantes pour lesquelles l'âge de la mère n'était pas disponible, au moment du calcul des divers taux.
- (3) On a utilisé les tables de mortalité pour les années 1980-1982 du Canada et des provinces pour obtenir les probabilités de survie.
- (4) D'après la population féminine du Canada en 1971.

### Tableau 6.

- (1) Sauf Terre-Neuve.
- (2) Naissances vivantes pour 1,000 femmes du groupe d'âge concerné.

### Tableaux 7 et 8.

- (1) Sauf Terre-Neuve.

### Tableau 10.

- (1) Sauf Terre-Neuve.
- (2) Ces chiffres pourraient être légèrement plus élevés en raison du fait que les naissances multiples non appariées figurent avec les naissances simples.

### Tableau 11.

- (1) Sauf Terre-Neuve.
- (2) Le rang tient compte de tous les enfants nés vivants de la mère.

### Tableaux 12, 13 et 14.

- (1) Sauf Terre-Neuve.
- (2) Fondé sur le poids déclaré à la naissance.

### Tableau 15.

- (1) Les taux de fécondité par âge selon les cohortes de ce tableau ont été calculés d'après les taux de certaines périodes à partir de 1921 et, par le fait même, présentent certaines limites.

**Footnotes — Concluded**

**Table 16.**

- (1) Excluding Newfoundland, Yukon and Northwest Territories.

**Table 19.**

- (1) Standardized to Canadian 1956 population.  
(2) Standardized to Canadian 1971 population.

**Table 23.**

- (1) Rates taken from an estimated on the basis of data in the Demographic Year Book, 1983.

**Notes — fin**

**Tableau 16.**

- (1) Sauf Terre-Neuve, Yukon et Territoires du Nord-Ouest.

**Tableau 19.**

- (1) D'après la population du Canada en 1956.  
(2) D'après la population du Canada en 1971.

**Tableau 23.**

- (1) Taux provenant de l'Annuaire démographique, 1983, ou calculés d'après les données de ce dernier.
