

# Parameter Guide

This guide consists of an encyclopaedic reference to SPSD/M parameters. A description of each of the three kinds of parameters (control, adjustment, and tax/transfer) is given. An appendix is included which gives tax/transfer parameter values for the supplied parameter files.

3.	Parameter Descriptions	2.1	ı

#### 1. Introduction

The Social Policy Simulation Model may be customized in two ways. The first is to modify the actual "c" language source code. This requires knowledge of the programming language as well as knowledge about the actual structure and implementation of the model.

A far simpler but less flexible and less powerful means of changing the function of the model is to turn the knobs and flip the switches provided by the model designers. These knobs and switches are known as parameters.

The files containing the parameter values have names which are given the extensions ".cpr" (control parameters), ".apr" (database adjustment parameters), and ".mpr" (tax/transfer model parameters). The values assigned may be changed by editing these files; interactively, during the running of the model; or by external models which generate these parameter files as output. The parameters in the commodity tax section of the model are generated by an external Input/Output model and should be altered only through that model. See the COMTAX User's Guide for more details.

The SPSM is designed to provide a great deal of flexibility through changing parameter values. Parameters are used for controlling the function of the model, its reporting facilities, adjusting the data and to provide values and options for the tax/transfer simulations.

As distributed, the standard model algorithm uses over 400 parameters which are provided with default values for ten alternative variants:

- · 1984 actual
- · 1985 actual
- · 1986 actual
- 1987 actual and estimated
- 1988 status quo (pre-reform)
- 1988 status quo (pre-reform), deflated to 1984 dollars
- · 1988 reform
- 1988 reform, deflated to 1984 dollars.
- 1989 reform and estimated
- 1989 reform and estimated, deflated to 1984 dollars.

The SPSM uses several types of parameters. Different types are checked for validity using different rules. The following is a description of the parameter types currently defined:

FLAG	A flag controls whether or not an algorithm (or program or cal- culation) is performed. With a value of one the algorithm is
	executed, with a value of zero it is not. Flag parameters always have the word "FLAG" as the last four letters in their name.
	A flag must take the value 0 or 1.

OPTION	An option parameter allows the choice of two or more algorithms
	(or programs or calculations). Values range from 1 to the number
	of options allowed. Option parameters always end in "OPT".

A valid option value is an integer between 1 and the highest number allowed in the parameter definition.

SCALAR Scalar parameters take a single numeric value with or without a decimal point.

STRING A string parameter is a short single line of text.

**VECTOR** 

A vector is a single column of numbers. The first value is the number of values to follow. The program checks that the correct number of values are included.

LOOKUP TABLE A lookup table contains a single value followed by a set of three columns. The initial single value indicates the number of rows which are to follow. The tables are used in a similar manner as a tax table. A value, such as taxable income, is provided as a parameter to a look up program and the amount of tax payable is returned. In a lookup table, the first column represents the input value, such as taxable income. The second column represents the output value corresponding to the input value in the same column. The third column represents the marginal change in the output value for the next increment (or tax bracket).

TABLE

A table is a numeric array with an arbitrary number or rows and columns. The array is preceded by a number indicating the number of rows to follow.

The purpose of this document is to provide an explanation of all parameters provided with the model. This includes a detailed description of how the parameter is used, its value for the variants provided, and wherever possible, the published source where the values were obtained. Many parameters have been estimated and the user is encouraged to inform us of the existence of more refined estimates or more appropriate values.

Section 2, organized by program, provides an overview of the parameters. For example, all parameters related to calculating Family Allowances (STDFA, AFAC1, AFAC2, AFAC3, AFAC4, QFS, QFPSL, and QFFSL) are listed together and each has a one line description.

In Section 3, the parameters are described in fuller detail. The alphabetic organization of this section will allow the user to locate a specific parameter more easily. References to the program function are given in this section to provide a cross reference to the Algorithm Guide.

Appendix A contains a listing of all tax/transfer parameter values and their sources provided with the SPSM distribution. This section is also organized by function. Section numbers correspond to those in Section 2.

## 2. Parameter Overview by Program

#### 2.1. Model Control Parameters

## 2.1.1. Descriptive Information on This SPSM Run

CPRDESC Description of SPSM run
LICENSEE SPSD/M licensee

AUTHOR Name of person doing simulation

OUTCPR Name of control parameter file (out)

ALGDESC Names of Standard and Alternate Algorithms

## 2.1.2. SPSD Input Files

INPSPD Name of SPSD file (in)

FXVFLAG Read FAMEX expenditure vector INPFXV Name of FAMEX vector file (in)

INPWGT Name of weight file (in)

## 2.1.3. Database Adjustment

AGENAME Name of database adjustment algorithm

INPAPR Name of database adjustment parameter file (in)
OUTAPR Name of database adjustment parameter file (out)

#### 2.1.4. Variant Information

VARALG Name of variant algorithm

VARMETH Method of creating variant variables
VARDESC Description of variant parameters

INPVARMPR Name of variant tax transfer parameter file (in)
OUTVARMPR Name of variant tax/transfer parameter file (out)

OUTMRSFLAG Variant results file creation flag
OUTVARMRS Name of variant results file (out)
Variant results file variables

#### 2.1.5. Base Information

BASALG Name of base algorithm

BASMETH Method of creating base variables
BASDESC Description of base parameters

INPBASMPR Name of base tax/transfer parameter file (in)

INPBASMRS Name of results file (in)
INPMRSVARS Base results file variables

## 2.1.6. Subsampling, Random Number Seed

SAMPLEREQ Size of sample requested
SAMPLE Size of sample obtained
WGTTOT Sum of household weights
SEED Random number generator seed

## 2.1.7. Record Selection Facility

SELFLAG
SELUNIT
SELSPEC
Selection facility activation flag
Selection facility family level
Selection specification

## 2.1.8. Marginal Tax Rate Facility

MARFLAG
Marginal tax rate facility activation flag
MARAMT
MARVAR
MARSPEC
Marginal tax rate facility activation flag
Amount to be added to variable for marginal calculation
Variable incremented for marginal calculation
Expression identifying recipients for marginal calculation

## 2.1.9. User-defined Analysis Variables

EX0 User expressions **EXOLAB** User expression labels EXOPREC User expression output precision EX1 User expressions EX1LAB User expression labels EX1PREC User expression output precision EX2 User expressions EX2LAB User expression labels EX2PREC User expression output precision EX3 User expressions EX3LAB User expression labels EX3PREC User expression output precision EX4 User expressions EX4LAB User expression labels EX4PREC User expression output precision EX5 User expressions EX5LAB User expression labels EX5PREC User expression output precision EX6 User expressions EX6LAB User expression labels EX6PREC User expression output precision EX7 User expressions EX7LAB User expression labels EX7PREC User expression output precision EX8 User expressions EX8LAB User expression labels

EX8PREC User expression output precision EX9 User expressions User expression labels EX9LAB EX9PREC User expression output precision EX10 User expressions EX10LAB User expression labels EX10PREC User expression output precision EX11 User expressions EX11LAB User expression labels EX11PREC User expression output precision EX12 User expressions EX12LAB User expression labels EX12PREC User expression output precision EX13 User expressions EX13LAB User expression labels EX13PREC User expression output precision EX14 User expressions EX14LAB User expression labels EX14PREC User expression output precision EX15 User expressions EX15LAB User expression labels EX15PREC User expression output precision EX16 User expressions EX16LAB User expression labels EX16PREC User expression output precision EX17 User expressions EX17LAB User expression labels EX17PREC User expression output precision EX18 User expressions EX18LAB User expression labels User expression output precision EX18PREC EX19 User expressions EX19LAB User expression labels EX19PREC User expression output precision

## 2.1.10. User-defined Categorical Variables

User class variables CLO CL0BRK Break values for user class variables CL1 User class variables CL1BRK Break values for user class variables User class variables CL2 CL2BRK Break values for user class variables CL3 User class variables Break values for user class variables CL3BRK User class variables CL4 CL4BRK Break values for user class variables CL5 User class variables CL5BRK Break values for user class variables CL6 User class variables

CL6BRK Break values for user class variables

CL7 User class variables

CL7BRK Break values for user class variables

CL8 User class variables

CL8BRK Break values for user class variables

CL9 User class variables

CL9BRK Break values for user class variables

#### 2.1.11. Text File Output Facility

ASCFLAG Text file output facility activation flag
OUTASC Name of text file results file (out)

ASCUNIT Text file output family level
ASCSTYLE Styles of text file output

ASCVARS Variables selected for text file output

## 2.1.12. SAS Output Facility

SASFLAG SAS output facility activation flag
OUTSAS Name of SAS results file (out)

SASUNIT SAS output family level

SASVARS Variables selected for SAS output

SASTITLE SAS file label

## 2.1.13. Reports

OUTTBL Name of report file (out)

## 2.1.13.1. Parameter Reporting

PRDFFLAG Parameter difference report activation flag

#### 2.1.13.2. Hard-wired Tables

TOFLAG Table 0 request flag TOAFLAG Table 0A request flag T1FLAG Table 1 request flag T1AFLAG Table 1A request flag T2FLAG Table 2 request flag T2AFLAG Table 2A request flag T3FLAG Table 3 request flag T3AFLAG Table 3A request flag Table 4 request flag T4FLAG Table 4A request flag T4AFLAG

TABUNIT Hard-wired tables family level

TABDELTA Hard-wired tables winner/loser threshold

INCVAR Variable to use for table 2
INCGP Income cutpoints for table 2

PVRAT Family poverty ratio fractions for table 4

## 2.1.13.3. User-specified Tabulation Facility

XTFLAG
XTSPEC
XTCOLS
XTLINES
X-tab facility activation flag
X-tab specification
X-tab desired print width
X-tab desired lines per page

## 2.1.13.4. Distributional Analysis Facility

DISTFLAG Distribution facility activation flag Distribution facility family level DISTUNIT DISTVAR Distribution facility variable DISTSAMP Distribution facility sample size DISTZERO Distribution facility zero inclusion flag DISTP Breakpoints for histogram plot DISTPWID Width of histogram plot DISTPHGT Height of histogram plot

## 2.2. Database Adjustment Parameters

APRDESC Description of database adjustment parameter file

#### 2.2.1. Dollar Denominated Parameters

Earnings threshold to be an earner EARNMIN PTF Table 4 poverty threshold RRSPIFLAG RRSP increment activation flag RRSPEMIN Minimum (idrpp+idrrsp) for increment if idrpp>0 RRSPEMAX Maximum (idrpp+idrrsp) for increment if idrpp>0 RRSPEINC Increment to idrrsp if condition and idrpp>0 RRSPSMIN Minimum (idrrsp) for increment if idrpp=0 RRSPSMAX Maximum (idrrsp) for increment if idrpp=0 RRSPSINC Increment to idrrsp if condition and idrpp=0

## 2.2.2. Database Adjustment Factors

GROWFLAG Adjustment factors activation flag

#### 2.2.3. UI Growth Parameters

UER Unemployment rate

UIBASEYRMAX Maximum insurable earnings for base year UITARGYRMAX Maximum insurable earnings for target year

#### 2.2.4. Income and Deduction Items

GFALEXP Growth factor: other allowable employment expenses **GFCARRY** Growth factor: carrying charges **GFCCEA** Growth factor: child care expense deduction allowed Growth factor: child care expenses GFCCET **GFCHARA** Growth factor: charitable donations and gifts **GFCLOSS** Growth factor: previous years capital losses GFCPPL65 Growth factor: CPP for age < 65 GFCPP65 Growth factor: CPP for age 65 GFCPP66 Growth factor: CPP for age 66 GFCPP67 Growth factor: CPP for age 67 GFCPP68 Growth factor: CPP for age 68 GFCPP69 Growth factor: CPP for age 69 GFCPP70 Growth factor: CPP for age 70 GFCPP71 Growth factor: CPP for age 71 Growth factor: CPP for age 72 GFCPP72 GFCPP73 Growth factor: CPP for age 73 GFCPP74 Growth factor: CPP for age 74 GFCPP75 Growth factor: CPP for age 75 GFCPPG75 Growth factor: CPP for age > 75 GFDISEX Growth factor: disability deduction **GFDUES** Growth factor: professional and union dues (T1) GFEDUC Growth factor: education deduction GFFOTC Growth factor: federal other tax credits Growth factor: federal political contribution tax credit GFFPTC GFICAPG Growth factor: capital gains received GFIDIV Growth factor: dividends received GFIEMP Growth factors: employment income GFIINT Growth factor: interest income GFILOSS Growth factor: business investment losses GFINOGV Growth factor: non-taxable other government income Growth factor: non-taxable other money income GFINOTH GFIOINV Growth factor: other investment income **GFIPENS** Growth factor: retirement pension income GFIROOM Growth factor: income from renters GFISA Growth factor: social assistance received GFISEFM Growth factor: self-employment income - farming GFISENF Growth factor: self-employment income - non-farming GFITC Growth factor: federal investment tax credit GFITOGV Growth factor: taxable other government income GFITOTH Growth factor: taxable other money item GFMEDA Growth factor: net medical claims

GFNCLOS	Growth factor: allowable other years non-capital losses
GFOTHDN	Growth factor: other deductions from total income
GFOTHPE	Growth factor: other dependent exemptions
GFPTC	Growth factor: calculated provincial tax credits
GFRPP	Growth factor: registered pension plan contributions (T1)

GFRRSP Growth factor: RRSP contributions (T1)

GFTUITN Growth factor: tuition fees

## 2.2.5. Famex Expenditure Items

GFFMX	Growth factor: Consumer expenditure categories
GFINTPL	Growth factor: interest on personal loans
GFNES	Growth factor: not elsewhere stated
GFTAXF	Growth factor: income taxes
GFUIC	Growth factor: UI contributions
GFNCAL	Growth factor: net change in assets and liabilities
GFRETPEN	Growth factor: retirement pension contribution (FAMEX)
GFRRSPT	Growth factor: total RRSP contributions (FAMEX)
GFFABD	Growth factor: account balancing difference
GFFOMR	Growth factor: other money receipts
GFPTAX	Growth factor: property tax

## 2.3. Government Transfers and Personal Income Taxes

## 2.3.1. Variant Description

MPRDESC Description of tax/transfer parameter file

TARGETYEAR Year of analysis

## 2.3.2. Government Transfers

## 2.3.2.1. Unemployment Insurance

UIERNMAX Maximum insurable earnings

## 2.3.2.1.1. Minimum Weeks to Qualify

UIREGMINWK	Minimum weeks to qualify for regular benefits
UIMATMINWK	Minimum weeks to qualify for maternity benefits
UISICMINWK	Minimum weeks to qualify for sickness benefits
UIRETMINWK	Minimum weeks to qualify for retirement benefits
UIFSHMINWK	Minimum weeks to qualify for fishing benefits

## 2.3.2.1.2. Regional Qualification

UIRGNMIN UIRGNWKS Regional unemployment rate Weeks required for eligibility

## 2.3.2.1.3. Repeater Qualification

UIREPUER

Regional unemployment rate Weeks of insurable employment

UIREPPREV UIREPWWKD

Repeater eligibility requirements

#### 2.3.2.1.4. Basic Parameters

UIWAITWKS

Minimum waiting period all claims

UIMAXBASEWKS UIMAXMATWKS

UIMAXBASEWKS Maximum number of weeks on the initial phase - regular

UIMAXSICWKS

Maximum number of weeks - maternity Maximum number of weeks - sickness

UIMAXRETWKS UIMAXFSHWKS

Maximum number of weeks - retirement Maximum number of weeks - fishing

UIMAXDUR

Maximum duration of a UI claim

#### 2.3.2.1.5. Labour Force Extended Benefits

UILFEMIN

Weeks worked in qualifying period

UILFEWKS

Weeks LFE entitlement

## 2.3.2.1.6. Regional Extended Benefits

UIRGEMIN

Unemployment rate for regional extended entitlement

**UIRGEWKS** 

Weeks regional extended entitlement

## 2.3.2.1.7. Benefit Rates

**UIBASRATE** 

Benefit rate for basic phase

UILFERATE

Benefit rate for labor force extended phase

UIRGERATE

Benefit rate for regional extended phase

## 2.3.2.1.8. Option Activation

UIENTFLAG

Basic entrance requirements flag

UIRGNFLAG UIRPTFLAG Regional requirements flag Repeater requirements flag

Basic phase calculation flag

UILFEFLAG
UIRGEFLAG
UIEFFFLAG
UIEFFFLAG
UIEFFFLAG
UIEFFFLAG
UIEFFFLAG
Labour force extended phase calculation flag
Regional extended phase calculation flag
Observed effective weekly benefit rate flag

## 2.3.2.2. Family Allowance

FAFLAG Family allowance flag

## 2.3.2.2.1. All Provinces Except Alberta and Quebec

FATD Family income family allowance turn down
FARR Family allowance repayment rate
STDFA Standard federal family allowance per child

#### 2.3.2.2.2. Alberta

AFAC1	Alberta FA benefit per child aged 0 - 6
AFAC2	Alberta FA benefit per child aged 7 - 11
AFAC3	Alberta FA benefit per child aged 12-15
AFAC4	Alberta FA benefit per child aged 16-17

## 2.3.2.2.3. Quebec

QFFSL Federal contribution on Quebec family allowance
Provincial contribution on Quebec family allowance
Provincial contribution on Quebec family allowance
Federal supplement per child 12-17 on Quebec family allowance

## 2.3.2.3. Old Age Security (OAS)

OASFLAG
BOAS
OASRR
OASTD
OASFLAG
OAS Basic OAS
OAS reduction rate
Family income OAS turn down

## 2.3.2.4. Guaranteed Income Supplement

## 2.3.2.4.1. Supplement Rates

GISFLAG
GISOASFLAG
GISOASFLAG
GISOASFLAG
GISOAS shortfall flag
BGISS
BGISS
BGISM
BESPA
BESPA
BESPA
PYINC
Federal GIS/SPA/ESPA flag
GIS OAS shortfall flag
Basic GIS supplement - single
Basic GIS supplement - married
Basic GIS portion of extended SPA
CPI deflator to calculate previous year income

GISRLS	Basic GIS reduction level: single pensioners
GISRRM	Basic GIS reduction rate: married pensioners
SPARL	SPA reduction point: one married/widowed
GISRRS	Basic GIS reduction rate: single pensioners
GISRLM	Basic GIS reduction level: married pensioners
SPAOASRR	OAS portion of SPA taxback rate

## 2.3.2.4.2. Take-up Rates

GISTURFLAG	GIS take up rate flag
GISST	GIS take-up rate: single pensioner by GIS benefit level
GISCT	GIS take-up rate: pensioner couple by GIS benefit level
GISOT	GIS take-up rate: one pensioner couple by GIS benefit level
SPAEFLAG	Extended SPA Eligibility Flag
SPAT	SPA take-up rate by SPA benefit level
SPAFE	SPA takeup rate: eligible female widow
SPAME	SPA takeup rate: eligible male widower
ESPAT	Extended SPA take-up rate by GIS benefit level

# 2.3.2.5. Provincial GIS Supplementation Programs

GISTFLAG	Provincial	GIS	top-up	flag
----------	------------	-----	--------	------

## 2.3.2.5.1. Nova Scotia

NSMAX	Nova Scotia maximum GIS supplement level
NS23	Nova Scotia GIS supplement for 2/3 GIS
NS13	Nova Scotia GIS supplement for 1/3 GIS
NSLT13	Nova Scotia GIS supplement for less than 1/3 GIS

## 2.3.2.5.2. Ontario

ONTS	Ontario GIS	supplement:	single pensioners
			married pensioners

## 2.3.2.5.3. Manitoba

MANS	Manitoba GIS supplement: single pensioners
MANC	Manitoba GIS supplement: married pensioners
MANSNPF	Manitoba GIS supplement reduction point: single
MANCNPF	Manitoba GIS supplement reduction point: married

## 2.3.2.5.4. Saskatchewan

SASKS	Saskatchewan GIS supplement: single pensioners
SASKC	Saskatchewan GIS supplement: married pensioners
SASKMINS	Saskatchewan GIS supplement minimum benefits: single
SASKMINC	Saskatchewan GIS supplement minimum benefits: married
SASKRR1	Saskatchewan GIS supplement reduction rate: regular
SASKRR2	Saskatchewan GIS supplement reduction rate: 1 GIS
SASKRR3	Saskatchewan GIS supplement reduction rate: SPA
	4 4

## 2.3.2.5.5. Alberta

ALTAMIN	Alberta GIS supplement minimum annual benefit
ALTASC	Alberta GIS supplement maximum annual benefit
ALTAWP	Alberta widow's pension maximum annual benefit

## 2.3.2.5.6. British Columbia

BCS	British Columbia GIS supplement: single pensioners
BCC	British Columbia GIS supplement: married pensioners

## 2.3.2.6. Federal Sales Tax Credit

FSTCFLAG	Federal sales tax credit flag
FSTCF	Federal sales tax credit amount for filer
FSTCS	Federal sales tax credit amount for spouse
FSTCC	Federal sales tax credit amount for dependant
FSTCL	Federal sales tax credit reduction level
FSTCR	Federal sales tax credit reduction rate

## 2.3.2.7. Federal Child Tax Credit

CTCFLAG	Child tax credit flag
CTCPC	Child tax credit per child
CTCTD	Family income child tax credit turn down
CTCRR	Child tax credit reduction rate
CTCIFLAG	Child tax credit social assistance income inclusion flag

## 2.3.2.8. Other Social Assistance Parameters

SAELDOPT	SA for elderly calculation method
SAFLAG	Federal social assistance flag
SFAOUT	Proportion of federal social assistance to eliminate

#### 2.3.3. Calculation of Total Income

CAPGIR FDGUR Capital gains inclusion rate Federal dividend gross-up rate

#### 2.3.4. Personal Taxes

#### 2.3.4.1. Deductions from Total Income

## 2.3.4.1.1. Employment Expense Deduction

EAOPT

Employment expense calculation option

ALEXPP

Proportion of other allowable employment expenses to use as deduction

EAMAX

Maximum employment expense deduction Employment expenses allowed - percent

EAPRP FACTISENF

Scale-up factor for non-farm self-employment income

## 2.3.4.1.2. CPP/QPP Contributions

CPPOPT CPPCTR CPP/QPP contribution deduction/credit option

CPPCTR

CPP/QPP contribution tax credit rate

CPPXM

CPP/QPP exemptible earnings
CPP/QPP maximum pensionable earnings

SECF

CPP/QPP contribution rate on self-employment earnings

WSCF

CPP/QPP contribution rate on employment earnings

WSCM

Ratio SECF/WSCF

## 2.3.4.1.3. UI Contributions

UICOPT

UI contributions deduction/tax credit option

MNWEL MXWEL Floor on weekly earnings subject to UI contribution Ceiling on weekly earnings subject to UI contribution

UIPF UICTR UI contribution rate on earnings UI contribution tax credit rate

## 2.3.4.1.4. Child Care Expense Deduction

CCEOPT

Child care expense deduction recipient

Child care expense deduction/tax credit option

CCETR Child care expense tax credit rate

#### 2.3.4.1.5. Tuition Deduction

TUITOPT

Tuition deduction/tax credit option

TUTCR

Tuition tax credit rate

## 2.3.4.2. Personal Exemptions

PEROPT

Personal exemption/tax credits option

## 2.3.4.2.1. Basic Exemption/Tax Credit

**BXM** 

Basic personal tax credit Basic personal exemption

## 2.3.4.2.2. Age Exemption/Tax Credit

AOPT

Age exemption/tax credit option

ATC

Age tax credit amount

AXM

Age exemption

## 2.3.4.2.3. Married Exemption / Spouse Tax Credit

MXM

Married exemption

MXMT MXMR STC STCT

Married exemption turndown level Married exemption reduction rate Spouse or equivalent tax credit Spouse tax credit turndown level

STCR

Spouse tax credit rate

## 2.3.4.2.4. Married Equivalent Exemption/Spouse Equivalent Tax Credit

**EMXM** ESTC

Married equivalent exemption Spouse equivalent tax credit

## 2.3.4.2.5. Exemption/Tax Credit for Wholly Dependent Children Aged 18+

OCXM

Exemption for wholly dependent child 18+

OCXMT

Exemption turndown for child 18+

**OCXMR** 

Exemption reduction rate for child 18+

# 2.3.4.2.6. Exemption/Tax Credit for Wholly Dependent Children Aged 17 and Under

YCTC Young child tax credit
YCTCT Young child tax credit turndown level
YCTCR Young child tax credit rate
YCXM Exemption for wholly dependent child 0 -17
YCXMT Exemption turndown for child 0-17
YCXMR Exemption reduction rate for child 0-17

#### 2.3.4.3. Other Deductions from Net Income

## 2.3.4.3.1. Capital Gains Deduction

CAPGFLAG Capital gains deduction flag
CAPGAL Capital gains deduction annual limit

## 2.3.4.3.2. Interest and Dividend Income Deduction

YINDL Maximum interest and dividend income deduction CGIFLAG Capital Gains Inclusion in Interest Income Deduction

#### 2.3.4.3.3. Pension Income Deduction/Tax Credit

YPNOPT Pension income deduction/tax credit option
YPNDL Maximum pension income deduction
YPNTL Maximum pension income tax credit
YPNTR Pension income tax credit rate

## 2.3.4.3.4. Medical Expense Deduction/Tax Credit

MDCROPT Medical and charitable deduction/tax credit
MEDTCR Medical expense tax credit rate

## 2.3.4.3.5. Charitable Donation Deduction / Tax Credit

STDED Standard deduction from net income
CHATL1 Charitable donations tax credit level 1
CHATR1 Charitable donations tax credit rate 1
CHATR2 Charitable donations tax credit rate 2

## 2.3.4.3.6. Disability Deduction / Tax Credit

DISOPT Disability deduction/tax credit option

MAXDTC Maximum disability tax credit
MAXDX Maximum disability deduction

#### 2.3.4.3.7. Education Deduction / Tax Credit

EDUCOPT Education deduction/tax credit option
EDTXPM Education tax credit per month

MAXET Maximum on transfer of education and tuition tax credit

## 2.3.4.3.8. UI Benefits Repayment Deduction

UIBRA UI benefit recovery base amount UIBRP UI benefit recovery portion

#### 2.3.4.3.9. Tax Credit Transfers

TAXCRT Tax credit transfer turndown level TAXCRR Tax credit transfer reduction rate

#### 2.3.4.4. Federal Taxes

#### 2.3.4.4.1. Basic Federal Tax

FTX Federal tax table

FDTCR Federal dividend tax credit rate

#### 2.3.4.4.2. Federal Surtax

FSURL1 Federal surtax level 1
FSURR1 Federal surtax rate 1
FSURL2 Federal surtax level 2
FSURR2 Federal surtax rate 2
FSURL3 Federal surtax level 3
FSURR3 Federal surtax rate 3

#### 2.3.4.4.3. Federal Tax Reduction

MXFTR Maximum federal tax reduction
FTRRL Federal tax reduction reduction level
FTRRR Federal tax reduction reduction rate

#### 2.3.4.4.4. Federal Alternate Minimum Tax

AMTEX

Alternate minimum tax: exemption level

AMTTX

Alternate minimum tax rate

## 2.3.4.4.5. Quebec Tax Abatement

QTAP

Quebec tax abatement proportion of basic federal tax

#### 2.3.4.5. Provincial Taxes

#### 2.3.4.5.1. Newfoundland

NPTF

Newfoundland provincial tax fraction

#### 2.3.4.5.2. Prince Edward Island

PPTF

P.E.I. provincial tax fraction

#### 2.3.4.5.3. Nova Scotia

VPTF

Nova Scotia provincial tax fraction

#### 2.3.4.5.4. New Brunswick

BPTF

New Brunswick provincial tax fraction

## 2.3.4.5.5. Quebec

QCAPGIR	Quebec capital gains inclusion rate
QDGUR	Quebec dividend gross-up rate
QALEXP	Quebec proportion of other allowable employment expenses to use
QEAMAX	Quebec maximum employment allowance deduction
QEAP	Proportion of earnings for Quebec employment allowance deduction
QFAIFLAG	Quebec Family Allowance Inclusion in Total Income
QBXM	Quebec basic personal exemption
QAXM	Quebec age exemption
QMXM	Quebec married exemption
QMXT	Quebec married exemption turndown
QMXR	Quebec married exemption reduction rate
QOCX	Quebec exemption for children 18 and over
QOCT	Quebec exemption turndown for children 18 and over
QOCR	Quebec exemption reduction rate for children 18 and over
QYCX	Quebec exemption for children 16 or 17

QYCT	Quebec exemption turndown for children 16 or 17
QYCR	Quebec exemption reduction rate for children 16 or 17
QYIDL	Quebec deduction limit for investment income
QYPDL	Quebec deduction limit for pension income
QSTD	Quebec standard deduction from net income
QMAXDX	Quebec maximum disability deduction or tax credit
QTX	Quebec income tax table
QTRP	Quebec tax reduction proportion
ODTCR	Quehec dividend tax credit rate

## 2.3.4.5.6. Ontario

OPTF	Ontario provincial tax fraction
OPTC	Ontario provincial tax cut-in
OMTY	Ontario taxable income above which no tax reduction
OTRF	Ontario tax reduction fraction
OSSML	Ontario social service maintenance surtax cut-in level
OSSMR	Ontario social service maintenance surtax rate

## 2.3.4.5.7. Manitoba

MPTF	Manitoba provincial tax fraction
MNRDOPT	Manitoba tax reduction calculation option
MTRBR	Manitoba tax reduction basic amount
MTRF	Manitoba tax reduction fraction
MANRD	Manitoba tax reduction table
MSTC	Manitoba surtax cut-in
MSTR	Manitoba surtax rate

## 2.3.4.5.8. Saskatchewan

SPTF	Saskatchewan provincial tax fraction
SFTAX	Saskatchewan provincial flat surtax rate on net income
STRBR	Saskatchewan basic provincial tax reduction
STRCL	Saskatchewan child tax reduction limit
STRPC	Saskatchewan tax reduction per child
STRRR	Saskatchewan tax reduction reduction rate
STRSC	Saskatchewan tax reduction for senior citizens
SSCI	Saskatchewan surtax cut-in
SSF	Saskatchewan provincial surtax fraction

## 2.3.4.5.9. Alberta

APTF	Alberta provincial tax fraction	
ATRBC	Alberta tax reduction basic claim	
ATRF	Alberta tax reduction fraction	
ATRF	Alberta tax reduction fraction	

## 2.3.4.5.10. British Columbia

CPTF	British Columbia provincial tax fraction
CPTC	British Columbia provincial tax reduction cut-in
CSCI	British Columbia provincial tax above which surtax applies
CSF	British Columbia provincial surtax rate
CHCM	British Columbia provincial health care surtax

## 2.3.5. Commodity Taxes

CTFLAG	Commodity tax activation flag
CTOPT	Commodity tax calculation method
CTDFLAG	Commodity tax detailed calculation flag
CTTXRM	Base year commodity tax removal factor
CTFCID	Federal custom import duties
CTFEXD	Federal excise duties
CTFMFG	Federal manufacturer's sales
CTFEXT	Federal excise taxes
CTFOEN	Federal other energy taxes
CTFRST	Federal retail sales tax
CTPPLQ	Provincial profits on liquor commissions
CTPLGL	Provincial liquor gallonage tax
CTPGAS	Provincial gasoline tax
CTPAMU	Provincial amusement tax
CTPTOB	Provincial tobacco tax
CTPRST	Provincial retail sales tax

## 3. Parameter Descriptions

## AFAC1: Alberta FA Benefit Per Child Aged 0 - 6

In Alberta, Federal Family Allowances are based on the age of the child. This is the annual amount paid on behalf of children aged 0-6.

Used in functions:

fa

Compute family allowance

## AFAC2: Alberta FA Benefit Per Child Aged 7 - 11

In Alberta, Federal Family Allowances are based on the age of the child. This is the annual amount paid on behalf of children aged 7-11.

Used in functions:

fa

Compute family allowance

## AFAC3: Alberta FA Benefit Per Child Aged 12 - 15

In Alberta, Federal Family Allowances are based on the age of the child. This is the annual amount paid on behalf of children aged 12-15.

Used in functions:

fa

Compute family allowance

## AFAC4: Alberta FA Benefit Per Child Aged 16 - 17

In Alberta, Federal Family Allowances are based on the age of the child. This is the annual amount paid on behalf of children aged 16-17.

Used in functions:

fa

Compute family allowance

## AGENAME: Name of Database Adjustment Algorithm

This control parameter describes the method by which the database will be adjusted should database adjustment be enabled through the use of the GROWFLAG parameter. The algorithm is always standard adjustment unless the algorithm is changed by the user. See the SPSM Algorithm Guide for a description of the standard adjustment procedure.

# ALEXPP: Proportion of Other Allowable Employment Expenses to Use as Deduction

The standard algorithm allows the imputed value for Other Allowable Employment Expenses to be reduced or grown using this factor. This may be used to simulate an increase or decrease in the amounts allowed for these expenses.

Used in functions:

txinet

Compute net income

## ALGDESC: Names of Standard and Alternate Algorithms

This control parameter is produced by SPSM and cannot be modified by the user. It is intended for use in 'glass box' mode and displays the names of the tax/transfer modules used in the standard and alternate algorithms.

## ALTAMIN: Alberta GIS Supplement Minimum Annual Benefit

Minimum annual Alberta Assured Income Plan benefits for single persons, or each eligible spouse in a married couple. Calculated as a sum of monthly minimums.

Used in functions:

qist

Compute Provincial GIS top-ups for elderly

## ALTASC: Alberta GIS Supplement Maximum Annual Benefit

Maximum annual Alberta Assured Income Plan benefits for eligible single persons and each eligible person in a married couple. Calculated as a sum of monthly maximums.

Used in functions:

qist

Compute Provincial GIS top-ups for elderly

### ALTAWP: Alberta Widow's Pension Maximum Annual Benefit

Maximum annual Alberta Widow's Pension Plan benefits for eligible persons. Calculated as a sum of monthly maximums.

Used in functions:

gist

Compute Provincial GIS top-ups for elderly

## AMTEX: Alternate Minimum Tax: Exemption Level

The federal Alternate Minimum Tax is computed by recalculating taxable income without including certain exemptions and applying a flat tax rate (AMTTX) to any income over this exemption level.

Used in functions:

txcalc

Calculate federal income tax

#### AMTTX: Alternate Minimum Tax Rate

In the calculation of the federal Alternate Minimum Tax, this flat tax rate is applied to any recalculated taxable income above the exemption level (AMTEX).

Used in functions:

txcalc

Calculate federal income tax

## AOPT: Age Exemption/Tax Credit Option

This parameter controls the tax treatment of the Age Exemption. With a value of 1 the Age Exemption is treated as an exemption from net income and with a value of 2 as a tax credit.

Used in functions:

txitax

Compute taxable income

## APRDESC: Description of Database Adjustment Parameter File

This database adjustment parameter can be used to provide a description of a particular set of database adjustment parameters found in a given database adjustment parameter file. This descriptive text is reproduced in the page headers of any requested output reports.

#### APTF: Alberta Provincial Tax Fraction

Basic Provincial Income Tax for Alberta (imbpt) is calculated as a proportion of Basic Federal Tax using this factor.

Used in functions:

txprov

Compute provincial taxes

## ASCFLAG: Text File Output Facility Activation Flag

This control parameter flag, when set to a value of 1, enables the text file output facility. When enabled, a file with the file name extension ".prn" will be written using ASCSTYLE format for ASCUNIT level of analysis and ASCVARS variables. The text file output facility provides a method for examining detailed SPSD/M microdata.

## ASCSTYLE: Styles of Text File Output

When enabled by ASCFLAG, this control parameter controls the formatting of the resulting text file output report. Three different styles of report can be produced, as given below.

- The first output line gives the mnemonics of the requested variables (specified by ASCVARS) as quoted strings, separated by blanks. Subsequent lines consist of values for each requested variable separated by single spaces. This format is suitable for import into certain spreadsheet packages.
- Each household is output as a group of output lines. A line consisting of a single formfeed character, surrounded by quotes, separates each such group. Each line consists of a variable mnemonic (surrounded by quotes), followed by the values of the variable for each unit in the household, separated by spaces. This format is suitable for import into certain spreadsheet packages.
- A fully formatted report, with both the variable mnemonic and label, is produced. The organization is similar that used for an ASCSTYLE value of 2, but the report is fully formatted for printing or interactive browsing using an editor.

## ASCUNIT: Text File Output Family Level

When the text file output facility is activated using the ASCFLAG parameter, this control parameter is used to specify the family level of analysis of the resulting report. Valid values and their meanings are given below.

- 0 Individual
- 1 Nuclear Family
- 2 Census Family
- 3 Economic Family
- 4 Household

## ASCVARS: Variables Selected for Text File Output

When the text file output facility is activated using the ASCFLAG parameter, this control parameter is used to specify which variables are to be output in the resulting report. Analysis variables are rolled up to the family level specified by ASCUNIT, and class variables at lower levels refer to characteristics of the reference person of the family unit. Please see the SPSM User's Guide for a fuller discussion of family level in SPSD/M.

## ATC: Age Tax Credit Amount

If the parameter AOPT is set to 2, all persons age 65 and over receive the value of ATC as a tax credit.

Used in functions:

txitax

Compute taxable income

#### ATRBC: Alberta Tax Reduction Basic Claim

The basic claim for the Alberta tax reduction. This is reduced by a fraction of basic Alberta income tax (ATRF).

Used in functions:

txprov

Compute provincial taxes

#### ATRF: Alberta Tax Reduction Fraction

The basic claim for the Alberta tax reduction (ATRBC) is reduced by this fraction of provincial taxes.

Used in functions:

txprov

Compute provincial taxes

## AUTHOR: Name of Person Doing Simulation

This control parameter is designed to be filled in by the user for documentation purposes.

## AXM: Age Exemption

If the parameter AOPT is set to 1, all filers age 65 and over receive the value of AXM as an age exemption.

Used in functions:

txitax

Compute taxable income

## BASDESC: Description of Base Parameters

This control parameter contains the descriptive label associated with the input parameter file or results file used to produce base variables. It is informational and cannot be directly modified by the user. It is a copy of the MPRDESC parameter associated with the file in question.

## BASALG: Name of Base Algorithm

This control parameter contains a label associated with the tax/transfer algorithm requested by the user through the BASMETH parameter. It is informational and cannot be directly modified by the user.

## BASMETH: Method of Creating Base Variables

This control parameter specifies the method of determining base results. May be one of 4 values:

- 0 No base results will be used during the current program run
- 1 Results will be read from an SPSM results file (.MRS) specified in INPBASMRS
- 2 Results will be calculated using the standard algorithm with tax/transfer parameters specified in INPBASMPR.
- 3 Results will be calculated using the alternate algorithm with tax/transfer parameters specified in INPBASMPR.

## BCC: British Columbia GIS Supplement: Married Pensioners

Maximum annual British Columbia GAIN for seniors supplement benefits for eligible married pensioners. Calculated as a sum of monthly maximums.

Used in functions:

gist

Compute Provincial GIS top-ups for elderly

## BCS: British Columbia GIS Supplement: Single Pensioners

Maximum annual British Columbia GAIN for seniors supplement benefits for eligible single pensioners. Calculated as a sum of monthly maximums.

Used in functions:

gist

Compute Provincial GIS top-ups for elderly

#### BESPA: Basic GIS Portion of Extended SPA

Maximum dollar benefits of the Guaranteed Income Supplement portion of Extended Spouses Allowance for widowed SPA recipients. This amount is combined with the OAS portion of Extended SPA to determine maximum extended SPA benefits. This value is calculated on an annual basis as the sum of the monthly maximums.

Used in functions:

qis

Compute GIS/SPA for elderly

## BGISM: Basic GIS Supplement - Married

Guaranteed Income Supplement maximum rate in dollars for each OAS pensioner in a married couple. Calculated on an annual basis as the sum of the monthly maximums.

Used in functions:

gis

Compute GIS/SPA for elderly

mpc

Calculate derived model parameters and do edits

## BGISS: Basic GIS Supplement - Single

Guaranteed Income Supplement maximum benefit for single OAS pensioners or married pensioners whose spouse does not qualify for OAS or SPA. This value is calculated on an annual basis as the sum of the monthly maximums.

Used in functions:

gis

Compute GIS/SPA for elderly

mpc

Calculate derived model parameters and do edits

#### BOAS: Basic OAS

Old Age Security maximum annual payment in dollars. This is calculated as the sum of the monthly maximum rates.

Used in functions:

gis

Compute GIS/SPA for elderly

mpc

Calculate derived model parameters and do edits

oas

Compute OAS for elderly

#### BPTF: New Brunswick Provincial Tax Fraction

New Brunswick Basic Provincial Income Tax (imbpt) is calculated as a proportion of Basic Federal Tax using this factor.

Used in functions:

txprov

Compute provincial taxes

#### BTC: Basic Personal Tax Credit

If the parameter PEROPT is set to 2 (for tax credits), all filers receive this amount as a basic personal tax credit.

Used in functions:

txitax

Compute taxable income

## **BXM: Basic Personal Exemption**

If the parameter PEROPT is set to 1 (for personal exemptions) all filers receive this amount as a basic personal exemption.

Used in functions:

txhstr

Apply tax transfers between head and spouse

txitax

Compute taxable income

## CAPGAL: Capital Gains Deduction Annual Limit

The Lifetime Capital Gains Exemption was introduced in 1985. This amount represents the annual limit of the maximum allowable deduction based on gross capital gains (idicapg), not net taxable capital gains.

Used in functions:

txitax

Compute taxable income

## CAPGFLAG: Capital Gains Deduction Flag

This parameter controls the calculation of the Lifetime Capital Gains Deduction. A value of 1 implements the deduction.

Used in functions:

txitax

Compute taxable income

## CAPGIR: Capital Gains Inclusion Rate

The proportion of gross capital gains (idicapg) that are treated as taxable.

#### Used in functions:

txcalc

Calculate federal income tax

txinet txitax Compute net income
Compute taxable income

## CCEOPT: Child Care Expense Deduction/Tax Credit Option

This parameter controls the tax treatment of Child Care Expenses. With a value of 1, Child Care Expenses are treated as a deduction from net income and with a value of 2 as a tax credit. Note that the standard algorithm uses idccea, the Child Care Expense Deduction Allowed in 1984.

#### Used in functions:

txccea

Compute child care expense allowance

## CCEROPT: Child Care Expense Deduction Recipient Option

Valid values are 1, to attribute the Child Care Expense Deduction or Tax Credit to the spouse (taken by SPSM to be the mother) if present or 2 to attribute the Child Care Expense Deduction (idccea) to the spouse with the lower net income.

#### Used in functions:

txccea

Compute child care expense allowance

txqccea

Compute child care expense allowance (Quebec)

## CCETR: Child Care Expense Tax Credit Rate

If CCEOPT is set to 2 (for tax credits), this parameter represents the proportion of the Child Care Expense Deduction (idccea) that may be claimed as a Tax Credit.

#### Used in functions:

txccea

Compute child care expense allowance

## CGIFLAG: Capital Gains Inclusion in Interest Income Deduction Flag

This parameter controls the inclusion of Taxable Capital Gains (imicapgt) in the calculation of income eligible for the Interest and Dividend Income Deduction. If GCIFLAG is assigned a value of 1, imicapgt is included. Given a value of 0, it is not included.

Used in functions:

txitax

Compute taxable income

#### CHATL1: Charitable Donations Tax Credit Level 1

The level above which the proportion of Charitable Donations and Gifts to the Crown (idchara) that may be claimed as a tax credit increases. This parameter is only used if MDCROPT is set to 2 for tax credits. Note that the standard algorithm uses Charitable Donations and Gifts to the Crown as defined in 1984 for this calculation.

Used in functions:

txitax

Compute taxable income

#### CHATR1: Charitable Donations Tax Credit Rate 1

The proportion of charitable donations below the first level (CHATL1) that may be claimed as a tax credit. This parameter is only used if MDCROPT is set to 2 for tax credits.

Used in functions:

txitax

Compute taxable income

#### CHATR2: Charitable Donations Tax Credit Rate 2

The proportion of charitable donations above the first level (CHATL1) that may be claimed as a tax credit. This parameter is only used if MDCROPT is set to 2 for tax credits.

Used in functions:

txitax

Compute taxable income

## CHCM: British Columbia Provincial Health Care Surtax Rate

In some years, this health care surtax rate is applied to British Columbia provincial income tax after the application of the basic surtax.

Used in functions:

txprov

Compute provincial taxes

#### CLO to CL9: User Class Variables

These control parameters control the creation of user-defined class variables. CL0 to CL9 have as their values the name of any one valid class or analysis SPSD/M variable. The variables named in these parameters are classified according to the breakpoints specified in the corresponding parameter in CL0BRK through CL9BRK.

#### CLOBRK to CLOBRK: Break Values for User Class Variables

These control parameters are used to specify a vector of breakpoints used to construct each of the user-specified class variables CL0 through CL9.

## CPPCTR: CPP/QPP Contribution Tax Credit Rate

The proportion of CPP/QPP Contributions that may be claimed as a Tax Credit. This parameter is used only if CPPOPT is set to 2 (for tax credits).

Used in functions:

txinet

Compute net income

## CPPOPT: CPP/QPP Contribution Deduction/Tax Credit Option

This parameter controls the tax treatment of CPP/QPP contributions. With a value of 1, CPP/QPP contributions are treated as a deduction from net income and with a value of 2 as a tax credit.

Used in functions:

txinet

Compute net income

## CPPXM: CPP/QPP Exemptible Earnings

The CPP/QPP yearly basic exemption used to calculate yearly maximum contributory earnings. The exemption is applied to idiemp to calculate contributions on earnings from employment and to the sum of idisenf and idisefm to calculate contributions on earnings from self-employment.

txinet

Compute net income

# CPRDESC: Description of SPSM Run

This control parameter can be used to provide a descriptive title to a specific SPSM run.

### CPTC: British Columbia Provincial Tax Reduction Cut-in

The British Columbia Tax reduction was discontinued after 1985. In 1985 and earlier if net income was lower than this amount the British Columbia provincial tax was reduced to equal federal tax payable.

Used in functions:

txprov

Compute provincial taxes

#### CPTF: British Columbia Provincial Tax Fraction

Basic Provincial Income Tax for British Columbia (imbpt) is calculated as a proportion of Basic Federal Tax using this factor.

Used in functions:

txprov

Compute provincial taxes

# CSCI: British Columbia Provincial Tax Above Which Surtax Applies

The amount of British Columbia Basic Provincial Income Tax above which the surtax rate (CSF) is applied.

Used in functions:

txprov

Compute provincial taxes

#### CSF: British Columbia Provincial Surtax Rate

This rate is applied to Basic Provincial Income Tax exceeding CSCI to calculate the British Columbia surtax.

txprov

Compute provincial taxes

### CTCFLAG: Child Tax Credit Flag

When this parameter is assigned a value of 1, the Child Tax Credit is calculated. With a value of 0, it is not calculated.

Used in functions:

txctc

Compute child tax credit

# CTCIFLAG: Child Tax Credit Social Assistance Income Inclusion Flag

This parameter controls the inclusion of Social Assistance Income (Federal Social Assistance, Provincial Social Assistance, the Guaranteed Income Supplement and the Provincial GIS Supplement) in the calculation of net income for the purpose of reducing the Child Tax Credit and the Federal Sales Tax Credit. With a value of 0, Social Assistance income is excluded. With a value of 1, it is excluded.

Used in functions:

txctc

Compute child tax credit

txfstc

Compute federal sales tax credit

#### CTCPC: Child Tax Credit Per Child

This is the amount allowable per child in calculating the refundable Child Tax Credit. This parameter is used only if CTCFLAG is set to 1.

Used in functions:

txctc

Compute child tax credit

#### CTCRR: Child Tax Credit Reduction Rate

The rate at which family net income (head plus spouse) reduces the total Child Tax Credit. This parameter is used only if CTCFLAG is set to 1.

Used in functions:

txctc

Compute child tax credit

# CTCTD: Family Income Child Tax Credit Turn Down

The level of family net income (head plus spouse) above which the federal Child Tax Credit begins to be paid at a lower rate. If family income (the sum of the net income of the head and spouse) exceeds this amount the total Child Tax Credit is reduced by a proportion (CTCRR) of income exceeding the turndown CTCTD.

See CTCIFLAG for a description of the options to include Social Assistance income in the calculation of net income for the purpose of reducing the Child Tax Credit.

#### Used in functions:

txctc

Compute child tax credit

### CTDFLAG: Commodity Tax Detailed Calculation Flag

If this flag is set to 0, commodity taxes are calculated at the total federal government and total provincial government level for each household. If the flag is turned on (set to 1) then 12 detailed tax types are calculated. For any commodity tax calculation CTDFLAG must be set to 1.

#### Used in functions:

ctmod

Compute commodity taxes for individuals and households

mpc

Calculate derived model parameters and do edits

### CTFCID: Federal Custom Import Duties

This parameter represents the effective tax rates of one of six detailed federal commodity tax types. Custom import duties are levied on imported goods used for both manufacture and final demand consumption. They are ad-valorem based. Their impact is being diminished as the General Agreement on Tariffs and Trade (GATT) discussions lead to rate reductions. These levies are incorporated into the producer's price of a good such that revenues from the federal manufacturer's sales tax and other excise taxes are subject to their levels.

#### Used in functions:

ctmod

Compute commodity taxes for individuals and households

Calculate derived model parameters and do edits

#### CTFEXD: Federal Excise Duties

This parameter represents the effective tax rates of one of six detailed federal commodity tax types. Under the excise act duties are levied on tobacco products and alcoholic beverages (other than wines) made in Canada. These commodities are under the control of the crown until these duties are paid. They are then stamped accordingly. These duties, like custom import duties, are included in the producer's price of the commodity. They typically take the form of specific quantity rates; they are not ad-valorem taxes. Revenues generated by the manufacturers sales tax and federal excise takes are conditioned on these levels.

#### Used in functions:

ctmod

Compute commodity taxes for individuals and households

mpc

Calculate derived model parameters and do edits

#### CTFEXT: Federal Excise Taxes

This parameter represents the effective tax rates of one of six detailed federal commodity tax types. Some commodities are additionally taxed on the producer price base through provisions in the Excise Tax Act. Taxes under this heading include: Gasoline, Diesel, and Aviation Fuel excise taxes; Tobacco and Alcohol excise taxes; Air transportation tax; Telecommunications programming tax; other excise taxes levied on heavy cars, air conditioners, jewelry, clocks, watches, lighters, playing cards etc.

#### Used in functions:

ctmod

Compute commodity taxes for individuals and households

mpc

Calculate derived model parameters and do edits

# CTFLAG: Commodity Tax Activation Flag

In order to generate commodity tax results this flag must be set to 1.

#### Used in functions:

ctmod

Compute commodity taxes for individuals and households

memo2

Compute consumable income, etc.

mpc

Calculate derived model parameters and do edits

#### CTFMFG: Federal Manufacturer's Sales

This parameter represents the effective tax rates of one of six detailed federal commodity tax types. It is levied on all finished manufactured goods at the producer's sales price irrespective of whether wholesalers, retailers, or individual consumers are the purchasers. It is levied upon the customs value of imported goods, including any applicable duty. For a list of exemptions see the *COMTAX Users Guide*.

ctmod

Compute commodity taxes for individuals and households

Calculate derived model parameters and do edits

### CTFOEN: Federal Other Energy Taxes

This parameter represents the effective tax rates of one of six detailed federal commodity tax types. These are taxes which were brought in under the 1981 National Energy Program. They had significant impacts on Federal Government revenues through the early 1980s but by 1986 they have been phased out. They are as follows: Natural Gas & Gas Liquids Excise Tax; Oil Export Charges; Canadian Ownership Special Charge.

Used in functions:

ctmod

Compute commodity taxes for individuals and households

(

Calculate derived model parameters and do edits

#### CTFRST: Federal Retail Sales Tax

This parameter represents the effective tax rates of one of six detailed federal commodity tax types. This is a dummy tax type set to 0 for historical simulations. It is provided to users who wish to use this in the context of tax reform.

Used in functions:

ctmod

Compute commodity taxes for individuals and households

Calculate derived model parameters and do edits

# CTOPT: Commodity Tax Calculation Method

This parameter controls the way in which commodity taxes are calculated.

1 = Calculate commodity tax conserving FAMEX total.

2 = Calculate tax using ratio to shared income concept

Used in functions:

ctmod

Compute commodity taxes for individuals and households

#### CTPAMU: Provincial Amusement Tax

This parameter represents the effective tax rates of one of six detailed provincial commodity tax types. This tax pertains to admissions to theaters, travelling amusements (i.e. circuses) and the like. This tax is not responsible for revenues earned on pari-mutuel betting activities.

ctmod mpc Compute commodity taxes for individuals and households

Calculate derived model parameters and do edits

#### CTPGAS: Provincial Gasoline Tax

This parameter represents the effective tax rates of one of six detailed provincial commodity tax types. This tax is applied to gasoline and diesel fuel use independent of whether the use occurs in goods producing or final demand sectors.

#### Used in functions:

ctmod

Compute commodity taxes for individuals and households

mpc

Calculate derived model parameters and do edits

### CTPLGL: Provincial Liquor Gallonage Tax

This parameter represents the effective tax rates of one of six detailed provincial commodity tax types. This fee applies to domestic beer producers in only four of the provinces: British Columbia; Ontario; Quebec; and Newfoundland.

#### Used in functions:

ctmod

Compute commodity taxes for individuals and households

mpc Calculate derived model parameters and do edits

# CTPPLQ: Provincial Profits on Liquor Commissions

This parameter represents the effective tax rates of one of six detailed provincial commodity tax types. These profits are defined as the value of gross sales less administrative and general expenses. The value of gross sales is, in part, a function of the markups over costs the provincial government applies. These changes do not require statutory revisions.

#### Used in functions:

ctmod

Compute commodity taxes for individuals and households

mpc

Calculate derived model parameters and do edits

#### CTPRST: Provincial Retail Sales Tax

This parameter represents the effective tax rates, by expenditure category and province, on consumer's expenditure. Note that retail sales taxes associated with the business sector have been "pushed through" and are incorporated into CTPRST. Note also that effective tax rates are expressed with a "tax-free" consumption denominator. Please see the COMTAX User's Guide for a more complete exposition on effective tax rates.

ctmod

Compute commodity taxes for individuals and households

Calculate derived model parameters and do edits

#### CTPTOB: Provincial Tobacco Tax

This parameter represents the effective tax rates of one of six detailed provincial commodity tax types. This tax is applied to cigarettes and cut tobacco. In both cases it is a specific rate tax either by cigarette or by the gram.

#### Used in functions:

ctmod

Compute commodity taxes for individuals and households

mpc

Calculate derived model parameters and do edits

### CTTXRM: Base Year Commodity Tax Removal Factor

The Input - Output based effective tax rates are generated with a denominator net of taxes to facilitate direct interpretation of alternate commodity tax regimes. Since the household expenditure observations on the SPSD are inclusive of 1984 taxes, this factor must first be applied to the data before alternate effective rates can be properly used.

#### Used in functions:

ctmod

Compute commodity taxes for individuals and households

# DISOPT: Disability Deduction/Tax Credit Option

If this parameter is assigned a value of 1, the value MAXDX is assigned to all individuals with a non-zero value for iddisex. With a value of 2, MAXDTC is assigned as a tax credit.

#### Used in functions:

txitax

Compute taxable income

# DISTFLAG: Distribution Facility Activation Flag

This control parameter activates the distributional analysis facility of SPSM, which allows the user to produce certain distributional reports on an SPSD/M variable.

#### DISTP: Breakpoints for Histogram Plot

This control parameter, when activated by DISTFLAG, is a vector of decile cutpoints used on the horizontal axis of the histogram frequency plot. Only values which fall between the first and last values of DISTP are used to produce the plot, so that DISTP also functions to truncate tails of the distribution for display purposes.

### DISTPHGT: Height of Histogram Plot

This control parameter, when activated by DISTFLAG, controls the number of vertical print positions used to produce the histogram plot. If this number is increased, the histogram plot can show a greater amount of detail.

# DISTPWID: Width of Histogram Plot

This control parameter, when activated by DISTFLAG, controls the number of horizontal print positions used to produce the histogram plot. If this number is increased, the plot can show a greater amount of detail.

# DISTSAMP: Distribution Facility Sample Size

This control parameter, when activated by DISTFLAG, controls how many sample observations are maintained in memory for computing deciles and the histogram plot. If this number is increased, the deciles can be computed more accurately, but at the cost of increased use of the computer memory.

# DISTUNIT: Distribution Facility Family Level

When the distribution facility report is activated using the DISTFLAG parameter, this control parameter is used to specify the family level of analysis of the resulting report. Valid values and their meanings are given below.

- 0 Individual
- 1 Nuclear Family
- 2 Census Family
- 3 Economic Family
- 4 Household

# DISTVAR: Distribution Facility Variable

The value of the DISTVAR control parameter is any valid class or analysis variable name for which a histogram plot and distributional statistics are desired. The value of DISTFLAG must be set to 1 or this parameter will be ignored.

# DISTZERO: Distribution Facility Zero Inclusion Flag

This control parameter, when activated by DISTFLAG, controls whether or not observations of the variable specified by DISTVAR with value zero are to be included when producing the distribution reports.

# EAMAX: Maximum Employment Expense Deduction

The General Employment Expense Deduction is calculated by taking a proportion (EAPRP) of earnings from employment (idiemp). If the result exceeds EAMAX is set to this amount. This parameter is used only if EAOPT is set to 1 (for deductions).

Used in functions:

txinet Compu

Compute net income

### EAOPT: Employment Expense Calculation Option

This parameter controls the treatment of employment expenses. With a value of 1, employment expenses are treated as a deduction and with a value of 2 as a tax credit. This parameter is used only if EAOPT is set to 1 (for deductions).

Used in functions:

txinet

Compute net income

#### EAPRP: Employment Expenses Allowed - Percent

The proportion of employment (idiemp) income allowed for the General Employment Expense Deduction up to a maximum of EAMAX. This parameter is used only if EAOPT is set to 1 (for deductions).

Used in functions:

txinet

Compute net income

#### EARNMIN: Earnings Threshold to Be an Earner

This parameter, found in the database adjustment (.apr) parameter file, is used to specify the minimum employment and self-employment income an individual must have in order to be considered an "earner". This value is used to produce the class variables nfnearn, cfnearn, efnearn, and hhnearn.

#### EDTXPM: Education Tax Credit Per Month

If the parameter EDUCOPT is set to 2 (for tax credits) the standard algorithm uses the imputed value for education deduction (preduc) to estimate the number of months for which the deduction was claimed. The result is multiplied by EDTXPM to calculate the Education Tax Credit.

Used in functions:

txitax

Compute taxable income

# EDUCOPT: Education Deduction/Tax Credit Option

This parameter controls the tax treatment of the Education Deduction. With a value of 1, the Education Deduction is treated as a deduction from net income and with a value of 2 as a tax credit.

Used in functions:

txitax

Compute taxable income

### EMXM: Married Equivalent Exemption

If the parameter PEROPT is set to 1 (for personal exemptions), a head with no spouse may claim a dependent child for this amount for the Married Equivalent Exemption. The exemption is reduced by a proportion (MXMR) of the child's net income exceeding the turndown level (MXMT).

Used in functions:

txhstr

Apply tax transfers between head and spouse

# ESPAT: Extended SPA Take-up Rate by GIS Benefit Level

Probability by GIS benefit level group of an eligible widow/widower applying for the Spouses Allowance. The parameter GISTURFLAG must be set to 1 for these probabilities to be applied.

Used in functions:

gis

Compute GIS/SPA for elderly

# ESTC: Spouse Equivalent Tax Credit

If the parameter PEROPT is set to 2 (for personal tax credits), a head with no spouse may claim an eligible dependent child for the Spouse Equivalent Tax Credit. This amount is reduced by the proportion (STCR) of the child's net income which exceeds a turndown level (STCT).

Used in functions:

txhstr

Apply tax transfers between head and spouse

#### EXO to EX19: User Expressions

These control parameters can be used to specify expressions which produce variables (named EX0 through EX19) which can in turn be used by various SPSM facilities. Note that the expressions are evaluated using the family level of analysis specified in the SPSM output facility in question. Please see the SPSM User's Guide for more information.

### EXOLAB to EX19LAB: User Expression Labels

These control parameters can be used to supply a descriptive label to each of the user-specified analysis variables EX0 through EX19.

# EXOPREC to EX19PREC: User Expression Output Precision

These control parameters can be used to specify the output precision associated with the user-specified analysis variables EX0 through EX19. If this precision is set to 0, analysis variables will be rounded to the nearest integer value before being output using the SAS output facility or the print file output facility.

# FACTISENF: Scale-up Factor for Non-Farm Self-Employment Income

This parameter can be used to "gross-up" non-farm self-employment income before applying the federal tax algorithm. It does not increase the real income received by an individual, but rather increases the amount of income used when calculating taxes. It is intended to be used to simulate the effect of reducing the deductibility of employment expenses. If this kind of simulation is not desired, FACTISENF should be set to the value 1.00000.

Used in functions:

txinet Compute net income

# FAFLAG: Family Allowance Flag

When this parameter is assigned a value of 1, federal and provincial Family Allowances are calculated. With a value of 0, they are not.

fa

Compute family allowance

### FARR: Family Allowance Repayment Rate

This parameter allows the repayment of Family Allowance based on net family income. If set to 0, Family Allowances are not repaid. If set to 1, the amount repaid is calculated as the lesser of Taxable Family Allowances (imtfa) or a proportion FARR of family net income exceeding the reduction level FATD. The repayment amount is added to the variable imrepay and is not considered a deduction from net income.

Used in functions:

txitax

Compute taxable income

### FATD: Family Income Family Allowance Turn Down

This parameter is the family net income level above which Family Allowances may be repaid at the rate determined by FARR. This parameter is not used if the value for FARR is set to 0.

Used in functions:

txitax

Compute taxable income

### FDGUR: Federal Dividend Gross-up Rate

Dividends from Canadian Corporations (ididiv) are multiplied by this proportion to calculate the taxable amount imidivt.

Used in functions:

txcalc

Calculate federal income tax

txinet

Compute net income

#### FDTCR: Federal Dividend Tax Credit Rate

This is the fraction of Taxable Canadian Dividends imidivt allowed for the Dividend Tax Credit.

Used in functions:

txcalc

Calculate federal income tax

# FSTCC: Federal Sales Tax Credit Amount for Dependant

If FSTCFLAG is set to 1, this amount is claimable for the Federal Sales Tax Credit on behalf of each child under the age of 18 years.

Used in functions:

txfstc

Compute federal sales tax credit

#### FSTCF: Federal Sales Tax Credit Amount for Filer

This parameter represents the basic Federal Sales Tax Credit claimable for the filer. The total family sales tax credit (on behalf of the head, spouse and dependants) is reduced by a fraction (FSTCR) of family net income (head and spouse) exceeding the turndown level (FSTCL).

Used in functions:

txfstc

Compute federal sales tax credit

#### FSTCFLAG: Federal Sales Tax Credit Flag

This parameter is used to control the Federal Sales Tax Credit option. With a value of 1, the credit is calculated otherwise it is not.

Used in functions:

txfstc

Compute federal sales tax credit

### FSTCL: Federal Sales Tax Credit Reduction Level

The level of family net income above which the total family Federal Sales Tax Credit is reduced.

Note that non-taxable Social Assistance income may or may not be included in the calculation of net income for this reduction depending upon the status of CTCIFLAG. Social Assistance income includes federal and provincial Social Assistance, the Guaranteed Income Supplement, Spouses Allowance and income from Provincial GIS supplementation programs.

This parameter is used only if FSTCFLAG is set to 1.

Used in functions:

txfstc

Compute federal sales tax credit

#### FSTCR: Federal Sales Tax Credit Reduction Rate

The proportion of Family Net Income exceeding FSTCL used to reduce the total family Federal Sales Tax Credit.

This parameter is used only if FSTCFLAG is set to 1.

Used in functions:

txfstc

Compute federal sales tax credit

# FSTCS: Federal Sales Tax Credit Amount for Spouse

The basic Federal Sales Tax Credit claimable on behalf of a spouse.

This parameter is used only if FSTCFLAG is set to 1.

Used in functions:

txfstc

Compute federal sales tax credit

#### FSURL1: Federal Surtax Level 1

Three level parameters and three rate parameters are provided to calculate a one, two or three-stage Federal Surtax. Surtax Rate 1 (FSURR1) is applied to Basic Federal Tax exceeding this Surtax Level 1 (FSURL1) to calculate the first component of the surtax.

Used in functions:

txcalc

Calculate federal income tax

#### FSURL2: Federal Surtax Level 2

Surtax Rate 2 (FSURR2) is applied to Basic Federal Tax exceeding this Surtax Level 2 (FSURL2) to calculate the second component of the surtax.

Used in functions:

txcalc

Calculate federal income tax

#### FSURL3: Federal Surtax Level 3

Surtax Rate 3 (FSURR3) is applied to Basic Federal Tax exceeding this Surtax Level 3 (FSURL3) to calculate the third component of the surtax.

txcalc

Calculate federal income tax

FSURR1: Federal Surtax Rate 1

Surtax Rate 1 (FSURR1) is applied to Basic Federal Tax exceeding this Surtax Level 1 (FSURL1) to calculate the first component of the surtax.

Used in functions:

txcalc

Calculate federal income tax

FSURR2: Federal Surtax Rate 2

Surtax Rate 2 (FSURR2) is applied to Basic Federal Tax exceeding this Surtax Level 2 (FSURL2) to calculate the second component of the surtax.

Used in functions:

txcalc

Calculate federal income tax

FSURR3: Federal Surtax Rate 3

Surtax Rate 3 (FSURR3) is applied to Basic Federal Tax exceeding this Surtax Level 3 (FSURL3) to calculate the third component of the surtax.

Used in functions:

txcalc

Calculate federal income tax

FTRRL: Federal Tax Reduction Reduction Level

In 1984 and 1985 the Federal Tax Reduction is reduced by a proportion (FTRRR) of Basic Federal Tax exceeding this level.

Used in functions:

txcalc

Calculate federal income tax

FTRRR: Federal Tax Reduction Reduction Rate

In 1984 and 1985 the Federal Tax Reduction is reduced by this proportion of Basic Federal Tax exceeding the Federal Tax Reduction Level (FTRRL).

txcalc

Calculate federal income tax

#### FTX: Federal Tax Table

This table represents the Federal tax curve. The first column represents Taxable Income, the second represents the amount of Basic Federal Tax payable at that level of taxable income, the third column represents the marginal tax rate for the interval between this and the next value in the table.

Only the first and third columns of the tax table need be specified. The second column is computed by the standard algorithm.

Used in functions:

txcalc

Calculate federal income tax

### FXVFLAG: Read FAMEX Expenditure Vector

When this flag is set to 1, expenditure totals and commodity tax simulations are performed.

Used in functions:

mpc

Calculate derived model parameters and do edits

# GFALEXP: Growth Factor: Other Allowable Employment Expenses

When GROWFLAG is set to 1, the 1984 value for Other Allowable Employment Expenses (idalexp) is always multiplied by this value.

# GFCARRY: Growth Factor: Carrying Charges

When GROWFLAG is set to 1, the 1984 value for Carrying Charges (idcarry) is always multiplied by this value.

# GFCCEA: Growth Factor: Child Care Expense Deduction Allowed

When GROWF LAG is set to 1, the 1984 value for Child Care Expense Deduction Allowed (idccea) is always multiplied by this value.

# GFCCET: Growth Factor: Child Care Expenses

When both GROWFLAG and CTFLAG are set to 1, the 1984 value of household expenditure on Child Care (idccet) is always multiplied by this factor.

#### GECHARA: Growth Factor: Charitable Donations And Gifts

When GROWFLAG is set to 1, the 1984 value for Charitable Donations and Gifts to the Crown (idchara) is always multiplied by this value.

# GFCLOSS: Growth Factor: Previous Years Capital Losses

When GROWFLAG is set to 1, the 1984 value for Previous Years Capital Losses (idcloss) is always multiplied by this value.

# GFCPP65: Growth Factor: CPP for Age 65

This parameter allows the growth of CPP/QPP benefits for recipients aged 65 years. When GROWFLAG is set to 1, the 1984 value for CPP/QPP Benefits for individuals aged 65 years (idicqp) is always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

# GFCPP66: Growth Factor: CPP for Age 66

This parameter allows the growth of CPP/QPP benefits for recipients aged 66 years. When GROWFLAG is set to 1, the 1984 value for CPP/QPP Benefits for individuals aged 66 years (idicqp) is always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

#### GFCPP67: Growth Factor: CPP for Age 67

This parameter allows the growth of CPP/QPP benefits for recipients aged 67 years. When GROWFLAG is set to 1, the 1984 value for CPP/QPP Benefits for individuals aged 67 years (idicqp) is always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

# GFCPP68: Growth Factor: CPP for Age 68

This parameter allows the growth of CPP/QPP benefits for recipients aged 68 years. When GROWFLAG is set to 1, the 1984 value for CPP/QPP Benefits for individuals aged 68 years (idicqp) is always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

# GFCPP69: Growth Factor: CPP for Age 69

This parameter allows the growth of CPP/QPP benefits for recipients aged 69 years. When GROWFLAG is set to 1, the 1984 values for CPP/QPP Benefits for individuals aged 69 years (idicqp) are always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

# GFCPP70: Growth Factor: CPP for Age 70

This parameter allows the growth of CPP/QPP benefits for recipients aged 70 years. When GROWFLAG is set to 1, the 1984 values for CPP/QPP Benefits for individuals aged 70 years (idicqp) are always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

# GFCPP71: Growth Factor: CPP for Age 71

This parameter allows the growth of CPP/QPP benefits for recipients aged 71 years. When GROWFLAG is set to 1, the 1984 values for CPP/QPP Benefits for individuals aged 71 years (idicqp) are always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

### GFCPP72: Growth Factor: CPP for Age 72

This parameter allows the growth of CPP/QPP benefits for recipients aged 72 years. When GROWFLAG is set to 1, the 1984 values for CPP/QPP Benefits for individuals aged 72 years (idicqp) are always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

# GFCPP73: Growth Factor: CPP for Age 73

This parameter allows the growth of CPP/QPP benefits for recipients aged 73 years. When GROWFLAG is set to 1, the 1984 values for CPP/QPP Benefits for individuals aged 73 years (idicqp) are always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

# GFCPP74: Growth Factor: CPP for Age 74

This parameter allows the growth of CPP/QPP benefits for recipients aged 74 years. When GROWFLAG is set to 1, the 1984 values for CPP/QPP Benefits for individuals aged 74 years (idicqp) are always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

# GFCPP75: Growth Factor: CPP for Age 75

This parameter allows the growth of CPP/QPP benefits for recipients aged 75 years. When GROWFLAG is set to 1, the 1984 values for CPP/QPP Benefits for individuals aged 75 years (idicap) are always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

# GFCPPG75: Growth Factor: CPP for Age > 75

This parameter allows the growth of CPP/QPP benefits for recipients aged 76 or over. When GROWFLAG is set to 1, the 1984 values for CPP/QPP Benefits for individuals over age 75 (idicqp) are always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

# GFCPPL65: Growth Factor: CPP for Age < 65

This parameter allows the growth of CPP/QPP benefits for recipients aged 64 or younger. When GROWFLAG is set to 1, the 1984 value for CPP/QPP Benefits for individuals under age 65 (idicqp) are always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

### GFDISEX: Growth Factor: Disability Deduction

When GROWFLAG is set to 1, the 1984 value for Disability Deduction (iddisex) is always multiplied by this value.

# GFDUES: Growth Factor: Professional And Union Dues (T1)

When GROWFLAG is set to 1, the 1984 value for the Deduction for Professional and Union Dues (imputed from T1 records, iddues) is always multiplied by this value.

#### GFEDUC: Growth Factor: Education Deduction

When GROWF LAG is set to 1, the 1984 value for Education Deduction (ideduc) is always multiplied by this value.

# GFFABD: Growth Factor: Account Balancing Difference

When both GROWFLAG and CTFLAG are set to 1, the 1984 value of household Account Balancing Difference (fxfabd) is always multiplied by this factor.

# GFFMX: Growth Factor: Consumer Expenditure Categories

This factor is used in conjunction with commodity tax modelling. There exist some known discrepancies in consumer expenditure categories between the FAMEX and other reliable data sources. This factor has been provided to adjust the FAMEX levels up or down to reduce the differences in the following important commodity tax areas:

- 0 = Food and Non-alcoholic Beverages
- 1 = Alcoholic Beverages
- 2 = Tobacco
- 3 = Men's & Boy's Clothing
- 4 = Women's, Girl's and Infant's Clothing
- 5 = Footwear and Shoe Repair
- 6 = Gross Imputed Rent
- 7 = Gross Paid Rent
- 8 = Other Lodging
- 9 = Electricity
- 10 = Natural Gas
- 11 = Other Fuels
- 12 = Furniture, Carpets and Floor Covering
- 13 = Durable Household Appliances
- 14 = Semi-durables
- 15 = Non-durables
- 16 = Laundry and Dry Cleaning
- 17 = Domestic Services
- 18 = Other Household Services
- 19 = Medical Care
- 20 = Hospital Care
- 21 = Other Medical Care
- 22 = Drugs and Sundries
- 23 = New and Used Automobiles
- 24 = Auto Repairs and Parts
- 25 = Gasoline, Oil and Grease
- 26 = Other Auto Related Services
- 27 = Local and Inter-city Transportation
- 28 = Telephone & Other Communications
- 29 = Recreation, Sports and Camping Equipment
- 30 = Books, Magazines and Stationary
- 31 = Recreational Services
- 32 = Education and Cultural Services
- 33 = Jewellery, Watches and Repairs
- 34 = Toilet Articles, Cosmetics, Etc.
- 35 = Personal Care
- 36 = Expend. in Hotels and Restaurants
- 37 = Personal Business
- 38 = Contributions to Non-profit Organizations
- 39 = Net Expenditures Abroad (=0)

### GFFOMR: Growth Factor: Other Money Receipts

When both GROWFLAG and CTFLAG are set to 1, the 1984 value of household Other Money Receipts (fxfomr) is always multiplied by this factor.

#### GFFOTC: Growth Factor: Federal Other Tax Credits

When GROWFLAG is set to 1, the 1984 value for Federal Other Tax Credits (idfotc) is always multiplied by this value.

#### GFFPTC: Growth Factor: Federal Political Contribution Tax Credit

When GROWFLAG is set to 1, the 1984 value for Federal Political Contribution Credit (idfptc) is always multiplied by this value.

#### GFICAPG: Growth Factor: Capital Gains Received

When GROWFLAG is set to 1, the 1984 value for Capital Gains/Losses (idicapg) is always multiplied by this value.

#### GFIDIV: Growth Factor: Dividends Received

When GROWFLAG is set to 1, the 1984 value for Dividends (ididiv) is always multiplied by this value.

### GFIEMP: Growth Factors: Employment Income

This Vector allows the growth of Employment Income (idiemp) by Industry of Employment (idind) in both the TX and UI standard algorithms. When GROWFLAG is set to 1, then in the TX standard algorithm the 1984 value of Employment Income is always multiplied by the appropriate growth factor derived from this table.

- 1 = Never Worked
- 2 = Agriculture
- 3 = Other Primary
- 4 = Manufacturing, Non-durables
- 5 = Manufacturing, Durables
- 6 = Construction
- 7 = Transportation and Communication
- 8 = Wholesale Trade
- 9 = Retail Trade
- 10 = Finance, Insurance, Real Estate
- 11 = Education and Related
- 12 = Health, Welfare, Religious
- 13 = Recreation, Accommodation, Food
- 14 = Business & Misc. Services
- 15 = Public Administration
- 16 = Worked >5 Years Ago

In order to adjust earnings to reflect a year other than 1984, provision is made for the user to specify earnings growth factors by industry. However, earnings that are already equal to UIBASEYRMAX will be set equal to UIERNMAX in the target year. Industries are grouped following the Survey of Consumer Finances public release codes. Users should note that when using the UI and TX standard algorithms together the values of GFIEMP are applied using different algorithms.

#### GFIINT: Growth Factor: Interest Income

When GROWFLAG is set to 1, the 1984 value for Interest Income (idiint) is always multiplied by this value.

#### GFILOSS: Growth Factor: Business Investment Losses

When GROWFLAG is set to 1, the 1984 value for Investment Losses (idiloss) is always multiplied by this value.

#### GFINOGV: Growth Factor: Non-taxable Other Government Income

When GROWFLAG is set to 1, the 1984 value for Non-taxable Other Government Income (idingy) is always multiplied by this value.

#### GFINOTH: Growth Factor: Non-taxable Other Money Income

When GROWFLAG is set to 1, the 1984 value for Non-taxable Other Income (idnoth) is always multiplied by this value.

#### GFINTPL: Growth Factor: Interest on Personal Loans

When both GROWFLAG and CTFLAG are set to 1, the 1984 value of household expenditure on Interest on Personal Loans (fxintpl) is always multiplied by this factor.

#### GFIOINV: Growth Factor: Other Investment Income

When GROWFLAG is set to 1, the 1984 value for Other Investment Income (idioinv) is always multiplied by this value.

### GFIPENS: Growth Factor: Retirement Pension Income

When GROWFLAG is set to 1, the 1984 value for Pension Income (idipens) is always multiplied by this value.

#### GFIROOM: Growth Factor: Income From Renters

When GROWFLAG is set to 1, the 1984 value for Income from Roomers and Boarders (idiroom) is always multiplied by this value.

#### GFISA: Growth Factor: Social Assistance Received

When GROWFLAG is set to 1, the 1984 value for Social Assistance (idisa) is always multiplied by this value.

### GFISEFM: Growth Factor: Self-employment Income - Farming

When GROWFLAG is set to 1, the 1984 value for Self-employed Farm Income (idisefm) is always multiplied by this value.

# GFISENF: Growth Factor: Self-employment Income - Non-farming

When GROWFLAG is set to 1, the 1984 value for Self-employed Non-farm Income (idisenf) is always multiplied by this growth factor.

### GFITC: Growth Factor: Federal Investment Tax Credit

When GROWFLAG is set to 1, the 1984 value for Federal Investment Tax Credit (iditc) is always multiplied by this value.

### GFITOGV: Growth Factor: Taxable Other Government Income

When GROWFLAG is set to 1, the 1984 value for Taxable Other Government Income (iditogv) is always multiplied by this value.

# GFITOTH: Growth Factor: Taxable Other Money Item

When GROWFLAG is set to 1, the 1984 value for Taxable Other Income (iditoth) is always multiplied by this value.

#### GFMEDA: Growth Factor: Net Medical Claims

When GROWFLAG is set to 1, the 1984 value for Medical Deductions (idmeda) is always multiplied by this value.

### GFNCAL: Growth Factor: Net Change In Assets And Liabilities

When both GROWFLAG and CTFLAG are set to 1, the 1984 value of Net Change in Assets and Liabilities (Savings) (fxncal) is always multiplied by this factor.

# GFNCLOS: Growth Factor: Allowable Other Years Non-Capital Losses

When GROWFLAG is set to 1, the 1984 value for Other Years Non-Capital Losses (idnolos) is always multiplied by this value.

# GFNES: Growth Factor: Not Elsewhere Stated

When both GROWFLAG and CTFLAG are set to 1, the 1984 value of household expenditures not included in other defined expenditure Categories (fxnes) is always multiplied by this factor.

# GFOTHDN: Growth Factor: Other Deductions From Total Income

When GROWFLAG is set to 1, the 1984 value for Other Deductions from Total Income (idothdn) is always multiplied by this value.

# GFOTHPE: Growth Factor: Other Dependant Exemptions

When GROWFLAG is set to 1, the 1984 value for Other Personal Exemptions (idothpe) is always multiplied by this value.

# GFPTAX: Growth Factor: Property Tax

When both GROWFLAG and CTFLAG are set to 1, the 1984 value of household expenditures on property tax (fxptax) is always multiplied by this factor.

### GFPTC: Growth Factor: Calculated Provincial Tax Credits

When GROWFLAG is set to 1, the 1984 value for Provincial Tax Credits (idptc) is always multiplied by this value.

# GFRETPEN: Growth Factor: Retirement Pension Contribution (FAMEX)

When both GROWFLAG and CTFLAG are set to 1, the 1984 value of household expenditure on Retirement Pensions (fxretpen) is always multiplied by this factor.

# GFRPP: Growth Factor: Registered Pension Plan Contributions (T1)

When GROWFLAG is set to 1, the 1984 value for RPP Contributions (idrpp) is always multiplied by this value.

#### GFRRSP: Growth Factor: RRSP Contributions (T1)

When GROWFLAG is set to 1, the 1984 T1 imputed value for RRSP Contributions (idrrsp) is always multiplied by this value.

# GFRRSPT: Growth Factor: Total RRSP Contributions (FAMEX)

When both GROWFLAG and CTFLAG are set to 1, the 1984 value of household expenditure on Registered Retirement Savings Plans as reported in the FAMEX survey (fxrrspt) is always multiplied by this factor.

#### GFTAXF: Growth Factor: Income Taxes

When both GROWFLAG and CTFLAG are set to 1, the 1984 value of household expenditures on Personal Taxes (fxtaxf) is always multiplied by this factor.

#### GFTUITN: Growth Factor: Tuition Fees

When GROWFLAG is set to 1, the 1984 value for Tuition Fees (idtuitn) is always multiplied by this value.

#### GFUIC: Growth Factor: UI Contributions

When both GROWFLAG and CTFLAG are set to 1, the 1984 value of household expenditure on Unemployment Insurance Contributions (fxuic) is always multiplied by this factor.

# GISBE1: Break Even for GIS One Pensioner Couple

GISBE1 represents the level of family income at which the GIS benefits of a pensioner married to a non-pensioner have been reduced to exactly zero. The figure is calculated as a fixed relationship to other input parameters as follows.

GISBE1 = MP.BGISS/MP.GISRRM+MP.BOAS+MP.GISRLS;

Used in functions:

mpc

Calculate derived model parameters and do edits

### GISBE2: Break Even for GIS/SPA Couple

GISBE2 represents the level of family income at which the combined GIS and SPA benefits of a pensioner married to a SPA recipient have been reduced to exactly zero.

GISBE2 = (MP.BGISM\*2) / (MP.GISRRM\*2) + MP.BOAS / MP.SPAOASRR + MP.GISRLM

Used in functions:

gis

Compute GIS/SPA for elderly

mpc

Calculate derived model parameters and do edits

# GISCT: GIS Take-up Rate: Pensioner Couple by GIS Benefit Level

Probability by GIS benefit level group of a married two OAS pensioner family applying for the Guaranteed Income Supplement. These probabilities are applied only when the parameter GISTURFLAG is set to 1.

Used in functions:

gis

Compute GIS/SPA for elderly

# GISFLAG: Federal GIS/SPA/ESPA Flag

When this parameter is assigned a value of 1, the GIS function is executed and Federal Guaranteed Income Supplement (imigis), Spouses Allowance and Extended Spouses Allowance (imispa) are calculated. With a value of 0, they are not.

Used in functions:

gis

Compute GIS/SPA for elderly

mpc

Calculate derived model parameters and do edits

# GISOT: GIS Take-up Rate: One Pensioner Couple by GIS Benefit Level

The probability by GIS benefit level group of applying for the Guaranteed Income Supplement for a married OAS pensioner whose spouse is not eligible for OAS, GIS or SPA. These probabilities are applied only when GISTURFLAG is set to 1.

Used in functions:

gis

Compute GIS/SPA for elderly

#### GISRLM: Basic GIS Reduction Level: Married Pensioners

The level of previous year annual family income above which the GIS starts to be paid at a reduced rate for a married OAS pensioner whose spouse is also an OAS pensioner.

Used in functions:

gis

Compute GIS/SPA for elderly

mpc

Calculate derived model parameters and do edits

### GISRLS: Basic GIS Reduction Level: Single Pensioners

The level of previous year annual income of a single OAS pensioner above which the GIS starts to be paid at a reduced rate.

Used in functions:

gis

Compute GIS/SPA for elderly

mpc

Calculate derived model parameters and do edits

#### GISRRM: Basic GIS Reduction Rate: Married Pensioners

Guaranteed Income Supplement reduction rate for married pensioners.

Used in functions:

qis

Compute GIS/SPA for elderly

mpc

Calculate derived model parameters and do edits

# GISRRS: Basic GIS Reduction Rate: Single Pensioners

Guaranteed Income Supplement reduction rate for single pensioners.

gis

Compute GIS/SPA for elderly

# GISST: GIS Take-up Rate: Single Pensioner by GIS Benefit Level

Probability by GIS benefit level group of a single OAS pensioner applying for the Guaranteed Income Supplement. These probabilities are applied only when GISTURFLAG is set to 1.

Used in functions:

gis

Compute GIS/SPA for elderly

### GISTFLAG: Provincial GIS Top-up Flag

When this parameter is assigned a value of 1, the six Provincial GIS Supplementation programs are activated. With a value of 0, they are not.

Used in functions:

gist

Compute Provincial GIS top-ups for elderly

mpc

Calculate derived model parameters and do edits

#### GROWFLAG: Adjustment Factors Activation Flag

If the value of this parameter is set to 1, then data adjustment parameters which begin with "GF" are used to adjust the appropriate dollar items.

1 = Adjust money items

0 = Do not adjust items

# INCGP: Income Cutpoints for Table 2

This control parameter is a vector of values used to provide the income cutpoints which define the columns of the hard-wired Tables 2 and 2A. Tables 2 and 2A can be activated using T2FLAG and T2AFLAG.

#### INCVAR: Variable for Table 2 and 2A

This string control parameter specifies the variable (usually an income variable) that is used to determine the column dimension of tables 2, 2A, 4, and 4A. Please see the SPSD/M User's Guide for more information.

#### INPAPR: Name of Database Adjustment Parameter File (in)

This control parameter gives the name of the file (using the conventions of the host operating system) which contains the database adjustment parameters to be used when executing SPSM. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory.

# INPBASMPR: Name of Base Tax/Transfer Parameter File (in)

This control parameter gives the name of the file (using the conventions of the host operating system) which contains the tax/transfer parameters to be used to produce base result variables. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory. BASMETH must be either 3 or 4 for INPBASMPR to have any effect.

# INPBASMRS: Name of Results File (in)

The value of this control parameter is a binary SPSD/M results file filename. If the full path name of the file is omitted, the path will default to the current directory. When the value of BASMETH is set to 1, this file is used for determining base results.

# INPEXV: Name of FAMEX Vector File (in)

This control parameter gives the name of the file (using the conventions of the host operating system) which contains the FAMEX expenditure vector binary database. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory.

#### INPMRSVARS: Base Results File Variables

The value of this control parameter is generated during an SPSM program run. The parameter is set to a string of variable names of variables found in the input base results file specified in INPBASMRS. The user is not able to edit this parameter interactively in the SPSM dialogue.

### INPSPD: Name of SPSD File (in)

This control parameter gives the name of the file (using the conventions of the host operating system) which contains the household and individual binary database to be used when executing SPSM. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory.

### INPVARMPR: Name of Variant Tax/Transfer Parameter File (in)

This control parameter gives the name of the file (using the conventions of the host operating system) which contains the tax/transfer parameters to be used to produce variant result variables. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory.

# INPWGT: Name of Weight File (in)

This control parameter gives the name of the file (using the conventions of the host operating system) which contains the household weight binary database to be used when executing SPSM. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory.

# LICENSEE: SPSD/M Licensee

This control parameter is produced by SPSM and contains the name of the person or organization licensed to use this particular copy of SPSD/M.

# MANC: Manitoba GIS Supplement: Married Pensioners

Maximum annual Manitoba Supplement for Pensioners (MSP) benefits for married couples where both spouses are receiving OAS/GIS or where one spouse is an OAS/GIS pensioner and the other is receiving SPA. Calculated as a sum of individual quarterly maximums.

Used in functions:

gist

Compute Provincial GIS top-ups for elderly

# MANCNPF: Manitoba GIS Supplement Reduction Point: Married

The level of previous year combined annual income above which the Manitoba Supplement for Pensioners (MSP) begins to be paid at a reduced rate to eligible married persons who are non-GIS/SPA pensioners age 55 and over. Calculated as the arithmetic average of the 1983 reduction point and the 1985 reduction point for runs with the TARGETYEAR 1984.

Used in functions:

qist

Compute Provincial GIS top-ups for elderly

#### MANRD: Manitoba Tax Reduction Table

In 1982, the Manitoba tax reduction was calculated using the Federal Tax Reduction and Taxable Income. This method of calculating the Manitoba Tax Reduction was replaced in 1983. This table is used only if the parameter MNRDOPT is set to 1.

Used in functions:

txprov

Compute provincial taxes

# MANS: Manitoba GIS Supplement: Single Pensioners

Maximum annual Manitoba Supplement for Pensioners (MSP) benefits for each single, widowed or divorced OAS/GIS pensioner or a pensioner whose spouse is not receiving OAS/GIS/SPA. Calculated as a sum of quarterly maximums.

Used in functions:

gist

Compute Provincial GIS top-ups for elderly

## MANSNPF: Manitoba GIS Supplement Reduction Point: Single

Maximum annual Manitoba Supplement for Pensioners (MSP) benefits for each single, widowed or divorced OAS/GIS pensioner or a pensioner whose spouse is not receiving OAS/GIS/SPA. Calculated as a sum of quarterly maximums.

Used in functions:

gist

Compute Provincial GIS top-ups for elderly

## MARAMT: Amount to Be Added to Variable for Marginal Calculation

This control parameter gives the amount of money to be added to income when the marginal tax rate facility has been activated through MARFLAG. Please refer to the SPSM User's Guide for more information.

## MARFLAG: Marginal Tax Rate Facility Activation Flag

This control parameter activates the SPSM marginal tax rate facility. This facility can be used to calculate marginal tax rates by income source, amount, recipient, and family level. Please refer to the SPSM User's Guide for more information.

## MARSPEC: Expression Identifying Recipients for Marginal Calculation

This control parameter allows the user to specify which individuals are to receive MARAMT when the marginal tax rate facility has been activated through MARFLAG. Please refer to the SPSM User's Guide for more information.

## MARVAR: Variable Incremented for Marginal Calculation

This control parameter gives the income source to be incremented when the marginal tax rate facility has been activated through MARFLAG. It must be the name of a valid SPSD "id" income variable. Please refer to the SPSM User's Guide for more information.

## MAXDTC: Maximum Disability Tax Credit

This is the maximum value of the Disability Tax Credit. If the parameter DISOPT is set to 2 (for tax credits), this amount is allowed as a tax credit for all persons for whom a value for Disability Deduction (iddisex) was imputed.

Used in functions:

txitax

Compute taxable income

#### MAXDX: Maximum Disability Deduction

This value represents the maximum Disability Deduction and is given to all individuals with a positive value for imputed Disability Deduction (iddisex).

Used in functions:

txitax

Compute taxable income

#### MAXET: Maximum on Transfer of Education and Tuition Tax Credit

The maximum dollar amount of the combined Education and Tuition Tax Credits that may be transferred between spouses or from a dependent to a supporting parent.

Used in functions:

txcalc

Calculate federal income tax

## MDCROPT: Medical and Charitable Deduction/Tax Credit

This parameter controls the tax treatment of Medical Expenses and Charitable Donations. With a value of 1, the medical expenses and charitable donations are treated as deductions from net income and with a value of 2, they are treated as tax credits.

Used in functions:

txitax

Compute taxable income

## MEDTCR: Medical Expense Tax Credit Rate

This parameter represents the proportion of Net Medical Expenses Calculated Amount (idmeda) that may be claimed as a Tax Credit. Note that medical expenses claimable are as defined in the base year and are not recalculated based on net income.

txitax

Compute taxable income

#### MNRDOPT: Manitoba Tax Reduction Calculation Option

This parameter controls the calculation of the Manitoba Tax Reduction. With a value of 1, the tax reduction is calculated based on the Federal Tax Reduction and taxable income using MANRD. With a value of 2, it is calculated as a basic amount (MTRBR) reduced by a proportion (MTRF) of taxable income.

Used in functions:

txprov

Compute provincial taxes

## MNWEL: Floor On Weekly Earnings Subject to UI Contribution

The level of weekly earnings (idiemp divided by idlyww) below which no contributions to UI are made.

Used in functions:

txinet

Compute net income

#### MPRDESC: Description of Tax/Transfer Parameter File

This parameter can be used to provide an overall title to the set of tax/transfer parameters contained in a given tax/transfer parameter file. This description is used by the SPSM output facilities to produce page titles.

#### MPTF: Manitoba Provincial Tax Fraction

Manitoba Basic Provincial Income Tax (imbpt) is calculated as a proportion of Basic Federal Tax using this factor.

Used in functions:

txprov

Compute provincial taxes

MSTC: Manitoba Surtax Cut-in

The level of basic Manitoba income tax above which the surtax (MSTR) is applied.

txprov

Compute provincial taxes

MSTR: Manitoba Surtax Rate

The surtax rate applied to basic Manitoba income tax in excess of MSTC.

Used in functions:

txprov

Compute provincial taxes

MTRBR: Manitoba Tax Reduction Basic Amount

This is the basic amount of the Manitoba Tax Reduction. Its actual definition depends on the method used to calculate the reduction. If MNRDOPT is set to 1, this parameter is not used. If MNRDOPT is set to 2, this amount is reduced by a proportion (MTRF) of taxable income.

Used in functions:

txprov

Compute provincial taxes

MTRF: Manitoba Tax Reduction Fraction

The fraction used to reduce Manitoba provincial tax reduction. Its actual purpose depends on the algorithm used to calculate the tax reduction. See MNRDOPT.

Used in functions:

txprov

Compute provincial taxes

MXFTR: Maximum Federal Tax Reduction

This represents the maximum value for the Federal Tax Reduction for an individual. An unused Federal Tax Reduction is transferable between spouses.

Used in functions:

txcalc

Calculate federal income tax

MXM: Married Exemption

If the PEROPT parameter is set to 1, then all married filers are eligible to claim this amount as an exemption, subject to reductions based on the spouse's net income.

**txhstr** Apply tax transfers between head and spouse

#### MXMR: Married Exemption Reduction Rate

The rate at which the married exemption is reduced by the spouse's net income exceeding the turndown level (MXMT).

Used in functions:

txhstr Apply tax transfers between head and spouse

#### MXMT: Married Exemption Turndown Level

The level of net income above which the married exemption begins to be reduced at the rate MXMR. This parameter is in effect only when the value of PEROPT is set to 1.

Used in functions:

txhstr Apply tax transfers between head and spouse

#### MXWEL: Ceiling On Weekly Earnings Subject to UI Contribution

The maximum level of weekly earnings used as a basis for the calculation of UI contributions.

Used in functions:

txinet Compute net income

#### NPTF: Newfoundland Provincial Tax Fraction

Nova Scotia Basic Provincial Income Tax (imbpt) is calculated as a proportion of Basic Federal Tax using this factor.

Used in functions:

txprov Compute provincial taxes

## NS13: Nova Scotia GIS Supplement for 1/3 GIS

Annual lump sum Nova Scotia Special Social Assistance payment payable to applicants receiving between one-third two-thirds maximum GIS. This payment is the same for single pensioners and each eligible pensioner in a married couple.

gist

Compute Provincial GIS top-ups for elderly

## NS23: Nova Scotia GIS Supplement for 2/3 GIS

Annual lump sum Nova Scotia Special Social Assistance payment payable to applicants receiving between two-thirds maximum GIS and maximum GIS. This payment is the same for single pensioners and each eligible pensioner in a married couple.

Used in functions:

gist

Compute Provincial GIS top-ups for elderly

#### NSLT13: Nova Scotia GIS Supplement for Less Than 1/3 GIS

Annual lump sum Nova Scotia Special Social Assistance payment payable to applicants receiving less than one-third maximum GIS. This payment is the same for single pensioners and each eligible pensioner in a married couple.

Used in functions:

gist

Compute Provincial GIS top-ups for elderly

## NSMAX: Nova Scotia Maximum GIS Supplement Level

Annual lump sum Nova Scotia Special Social Assistance payment payable to applicants receiving maximum GIS. This payment is the same for single pensioners and each eligible pensioner in a married couple.

Used in functions:

qist

Compute Provincial GIS top-ups for elderly

## OASFLAG: Old Age Security Flag

When this parameter is assigned a value of 1, the Old Age Security calculation is activated. With a value of 0, the calculation of OAS is suppressed.

Used in functions:

mpc

Calculate derived model parameters and do edits

oas

Compute OAS for elderly

## OASRR: OAS Repayment Rate

This parameter is available for testing the effects of repaying OAS benefits based on a proportion of net income. The OAS repayment is calculated as the lesser of OAS Benefits (imioas) and a proportion OASRR of family net income (head plus spouse) exceeding the reduction level OASTD. The calculated OAS repayment is added to imrepay, All Repayments. If OASRR is set to 0, no repayment is calculated.

Used in functions:

txitax

Compute taxable income

## OASTD: Family Income OAS Turn Down

The OAS repayment is calculated as the lesser of OAS Benefits (imioas) and a proportion OASRR of family net income (head plus spouse) exceeding the reduction level OASTD. The calculated OAS repayment is added to imrepay, All Repayments. If OASRR is set to 0, no repayment is calculated.

Used in functions:

txitax

Compute taxable income

## OCXM: Exemption for Wholly Dependent Child 18+

If the parameter PEROPT is set to 1, each wholly dependent child age 18 or over may be claimed for an exemption of this amount, subject to reductions based on the child's net income.

Used in functions:

txhstr

Apply tax transfers between head and spouse

## OCXMR: Exemption Reduction Rate for Child 18+

The proportion used to determine the amount of the income of a dependent child 18 or over which will be used to reduce the exemption for wholly dependent children (OCXM).

Used in functions:

txhstr

Apply tax transfers between head and spouse

#### OCXMT: Exemption Turndown for Child 18+

The level of net income above which the dependant exemption begins to be reduced for dependants aged 18 or over. This parameter is in effect only when the value of PEROPT is set to 1.

Used in functions:

txhstr

Apply tax transfers between head and spouse

#### OMTY: Ontario Taxable Income Above Which No Tax Reduction

Ontario Provincial Income Tax may be reduced for filers with taxable income below OMTY. Below OPTC, provincial tax is zero. Between OPTC and OMTY, provincial tax is multiplied by a fraction (OTRF).

Used in functions:

txprov

Compute provincial taxes

## ONTC: Ontario GIS Supplement: Married Pensioners

Maximum annual Ontario Guaranteed Annual Income System (GAINS-A) benefits for each eligible pensioner in a married couple. Calculated as a sum of monthly maximums as illustrated in the calculation of the annual value for 1984:

Jan - Mar (\$82.12)

Apr - Jun (\$82.12 x OAS/GIS April Indexation rate (.008)=88.77)

Jul - Dec (\$83)

Used in functions:

gist

Compute Provincial GIS top-ups for elderly

## ONTS: Ontario GIS Supplement: Single Pensioners

Maximum annual Ontario Guaranteed Annual Income System (GAINS-A) benefits for eligible single persons. Calculated as a sum of monthly maximums for 1984.

Used in functions:

gist

Compute Provincial GIS top-ups for elderly

#### OPTC: Ontario Provincial Tax Cut-in

Ontario Provincial Income Tax may be reduced for filers with taxable income below OMTY. Below OPTC, provincial tax is zero. Between OPTC and OMTY, provincial tax is multiplied by a fraction (OTRF).

#### OPTF: Ontario Provincial Tax Fraction

Basic Ontario Provincial Income Tax is calculated as a proportion of Basic Federal Tax using this factor.

Used in functions:

txprov

Compute provincial taxes

#### OSSML: Ontario Social Service Maintenance Surtax Cut-in Level

The level of Basic Ontario Provincial Income Tax above which the Ontario Social Services Maintenance Tax is applied.

Used in functions:

txprov

Compute provincial taxes

#### OSSMR: Ontario Social Service Maintenance Surtax Rate

In 1984, This Ontario Social Services Maintenance Tax Rate was applied to Basic Ontario Income Tax in excess of the cut-in level OSSML.

Used in functions:

txprov

Compute provincial taxes

#### OTRF: Ontario Tax Reduction Fraction

Ontario Provincial Income Tax may be reduced for filers with taxable income below OMTY. Below OPTC, provincial tax is zero. Between OPTC and OMTY, provincial tax is multiplied by a fraction (OTRF).

Used in functions:

txprov

Compute provincial taxes

#### OUTAPR: Name of Database Adjustment Parameter File (out)

This control parameter gives the name of the file (using the conventions of the host operating system) which will contain the database adjustment parameters which were used to adjust SPSD variables. SPSM writes out such a file only if the user changed one or more database adjustment parameters from the values in the corresponding input file INPAPR. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory.

## OUTASC: Name of Text File Results File (out)

This control parameter gives the name of the file (using the conventions of the host operating system) which will contain the output report generated by the text output facility. The text output facility must be activated using ASCFLAG for OUTASC to have any effect. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory.

## OUTCPR: Name of Control Parameter File (out)

This control parameter gives the name of the file (using the conventions of the host operating system) which will contain the output control parameter file. An output control parameter file is always created, and includes any changes the user made to the input control parameter file. In addition, certain "read-only" parameters which are created by SPSM for informational purposes may have changed values. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory.

## OUTMRSFLAG: Variant Results File Creation Flag

If the value of the control parameter OUTMRSFLAG is set to 1, a results file (with name given by OUTVARMRS) will be created containing variant results for variables specified in OUTMRSVARS. Results are always saved at the individual (not family or household) level.

#### OUTMRSVARS: Variant Results File Variables

This control parameter contains a list of tax/transfer calculated variables whose variant values will be recorded in the file named OUTVARMRS if the variant results file facility has been activated by OUTMRSFLAG. Only variant tax/transfer variables (that is, those that begin with "ct" or "im") can be recorded in a results file.

#### OUTSAS: Name of SAS Results File (out)

If the SAS results file facility has been activated using SASFLAG, then the control parameter OUTSAS contains the name of the resulting SAS file. This file must have an extension of ".ssd" and if it does not already exist, SPSM will change OUTSAS to the name "spsmtemp.ssd". The user can then change "spsmtemp.ssd" to some other name if desired by using the PROC DATASETS procedure in SAS. Because SAS native files contain a generated key in their header, SPSM can only write over existing SAS files (using the existing generated key in their header), or else produce a file with the name "spsmtemp.ssd", whose header key is already known.

An associated file, with the same stem as OUTSAS but with extension ".sfm", is also produced when the SAS output facility is activated. It is a text file which contains SAS source code (PROC FORMAT and associated statements) which will define the formats for any class variables given in SASVARS. It (or equivalent statements) should be included in any SAS job which reads the SAS file named by OUTSAS.

## OUTTBL: Name of Report File (out)

This control parameter gives the name of the file (using the conventions of the host operating system) which will contain all summary reports generated by SPSM output facilities, including the cross tabulation facility and distributional analysis facility. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory.

## OUTVARMPR: Name of Variant Tax/Transfer Parameter File (out)

This control parameter gives the name of the file (using the conventions of the host operating system) which will contain the output variant tax/transfer parameters. SPSM writes out such a file only if the user changed one or more variant tax/transfer parameters from the values in the corresponding input file INPVARMPR. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory.

#### OUTVARMRS: Name of Variant Results File (out)

This control parameter gives the name of the file (using the conventions of the host operating system) which will contain the output variant results. Such a file is generated only if the user activates the variant result file facility using OUTMRSFLAG. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory.

## PEROPT: Personal Exemptions/Tax Credits Option

This parameter controls the tax treatment of the Basic Personal Exemption, the Spouses Exemption, Spouse Equivalent Exemption and the Young Child Exemption. With a value of 1, these items are treated as an exemptions from net income and with a value of 2, they are treated as tax credits.

#### Used in functions:

txhstr txitax Apply tax transfers between head and spouse

Compute taxable income

#### PPTF: P.E.I. Provincial Tax Fraction

Prince Edward Island Basic Provincial Income Tax (imbpt) is calculated as a proportion of Basic Federal Tax using this factor.

#### Used in functions:

txprov

Compute provincial taxes

## PRDFLAG: Parameter Difference Report Activation Flag

When this control parameter is set to 1, a report is written to the file given by OUTTBL. This report shows tax/transfer parameter differences between base and variant. A more sophisticated parameter difference report can be obtained by using the compparm utility, which is documented in the SPSM Tools User's Guide.

#### PTF: Table 4 Poverty Threshold

This parameter, defined in the database adjustment parameter file, is a two dimensional array giving a user-supplied "poverty threshold" for families by number of persons and family type. The ratio of family income to the "poverty threshold" is used, in conjunction with the PVRAT control parameter, to create the column categories for the hard-wired tables 4 and 4A. These tables must have been activated using T4FLAG or T4AFLAG for this parameter to be used. Please see the SPSM User's Guide for more information on the hard-wired tables.

#### PURAT: Family Poverty Ratio Fractions for Table 4

This control parameter is a vector which defines the ranges of family-specific poverty threshold ratios to be used when producing the hard-wired tables 4 or 4A. Please see the SPSM User's Guide for more information on the hard-wired tables.

#### PYINC: CPI Deflator to Calculate Previous Year Income

CPI deflator applied to income to obtain estimate of the previous year's income for needs tested programs. Calculated as CPI, Canada, All Items annual average January-December 1983/1985 divided by 1984/1986.

Used in functions:

gis

Compute GIS/SPA for elderly

gist

Compute Provincial GIS top-ups for elderly

## QALEXP: Quebec Proportion of Other Allowable Employment Expenses to Use

The standard algorithm allows the imputed value for Other Allowable Employment Expenses (idalexp) to be reduced or grown using this factor for the purposes of calculating net income for Quebec Provincial Income Tax.

Used in functions:

txqinet

Compute net income (Quebec)

## QAXM: Quebec Age Exemption

In calculating taxable income for Quebec Provincial Income Tax, all Quebec filers age 65 and over receive the value of QAXM as the Basic Age Exemption.

txqitax

Compute taxable income (Quebec)

QBXM: Quebec Basic Personal Exemption

In calculating taxable income for Quebec Provincial Income Tax, all Quebec filers receive the value of QBXM as the basic personal exemption.

Used in functions:

txqhstr

Apply tax transfers between head and spouse (Quebec)

txqitax

Compute taxable income (Quebec)

QCAPGIR: Quebec Capital Gains Inclusion Rate

The proportion of capital gains included in taxable income in calculating total income for Quebec Provincial Income Tax.

Used in functions:

txqinet

Compute net income (Quebec)

QDGUR: Quebec Dividend Gross-up Rate

In calculating total income for Quebec Provincial Income Tax, dividends from Canadian corporations are multiplied by this proportion to derive the taxable amount.

Used in functions:

txqinet

Compute net income (Quebec)

QDTCR: Quebec Dividend Tax Credit Rate

This parameter represents the proportion of taxable dividends used to calculate the Quebec Dividend Tax Credit.

Used in functions:

txprov

Compute provincial taxes

## QEAMAX: Quebec Maximum Employment Allowance Deduction

In calculating total income for Quebec Provincial Income Tax, the Employment Allowance Deduction is the lower of QEAP times employment income (idiemp) and QEAMAX.

Used in functions:

txqinet

Compute net income (Quebec)

## QEAP: Proportion of Earnings for Quebec Employment Allowance Deduction

In calculating total income for Quebec Provincial Income Tax, this parameter represents the proportion of earnings from employment (idiemp) that may be claimed as an Employment Allowance Deduction up to a specified ceiling (QEAMAX).

Used in functions:

txqinet

Compute net income (Quebec)

## QFAIFLAG: Quebec Family Allowance Inclusion in Total Income Flag

In calculating total income for Quebec Provincial Income Tax, this parameter controls whether or not Taxable Family Allowances (imtfa) are included in Total Income imqitot. If set to a value of 1, Taxable Family Allowances are included, if set to 0, they are not.

Used in functions:

txqinet

Compute net income (Quebec)

## QFFSL: Federal Contribution on Quebec Family Allowance

In Quebec, the federal contribution is based on the number of children in the family. The contribution for the first child, for 1984, being \$215.76, \$342.60 for the second child and \$833.90 for the third and each subsequent child.

In the look-up table, the first column represents the number of children, the second column is the cumulative amount and the third column represents the marginal amount per child.

Used in functions:

fa

Compute family allowance

## QFPSL: Provincial Contribution on Quebec Family Allowance

In Quebec, the provincial portion of Family Allowances are also based on the number of children in the family. The table is used similarly to QFFSL.

Used in functions:

fa

Compute family allowance

#### QFS: Federal Supplement per Child 12-17 on Quebec Family Allowance

In Quebec, the provincial government pays a Family Allowance Supplement of this amount on behalf of each child aged 12 to 17.

Used in functions:

fa

Compute family allowance

#### QMAXDX: Quebec Maximum Disability Deduction

This value is used to adjust the imputed Disability Exemption (iddisex) value for blind persons or persons confined to a wheelchair. If an individual has a positive value for iddisex, QMAXDX is assigned as a deduction from net income.

This may also be deducted on behalf of a spouse or dependants.

Used in functions:

txqitax

Compute taxable income (Quebec)

## QMXM: Quebec Married Exemption

In calculating tax able income for Quebec Provincial Income Tax, all married filers are eligible to claim this amount as an exemption on behalf of a dependent spouse or, in the absence of a spouse, of a dependent child. The amount is reduced by a proportion (QMXR) of the spouse's or dependent's net income which exceeds the reduction level (QMXT).

Used in functions:

txqhstr

Apply tax transfers between head and spouse (Quebec)

## QMXR: Quebec Married Exemption Reduction Rate

This is the proportion of the dependent spouse's net income in excess of QMXT which is used to reduce the Quebec Married Exemption.

**txqhstr** Apply tax transfers between head and spouse (Ouebec)

QMXT: Quebec Married Exemption Turndown

A specified portion (QMXR) of the married dependant's net income in excess of this amount is used to reduce the Quebec Married Exemption.

Used in functions:

txqhstr

Apply tax transfers between head and spouse (Quebec)

QOCR: Quebec Exemption Reduction Rate for Children 18 And Over

This is the rate used to reduce the old child exemption in the calculation of taxable income for Quebec Provincial Income Tax. It is applied to the dependant's net income exceeding the Old Child Exemption Turndown (QOCT).

Used in functions:

txqhstr

Apply tax transfers between head and spouse (Quebec)

QOCT: Quebec Exemption Turndown for Children 18 And Over

In the calculation of taxable income for Quebec Provincial Income Tax, net income received by the dependant over this level reduces the old child exemption by the excess times the rate OOCR.

Used in functions:

txqhstr

Apply tax transfers between head and spouse (Quebec)

QOCX: Quebec Exemption for Children 18 And Over

In the calculation of taxable income for the Quebec Provincial Income Tax, children over the age of 17 years may be claimed for this amount. If the dependant is over age 21 then he/she must have been either in full time attendance at an educational institution or physically or mentally infirm.

Used in functions:

txqhstr

Apply tax transfers between head and spouse (Quebec)

#### QSTD: Quebec Standard Deduction from Net Income

In the calculation of taxable income for Quebec Provincial Income Tax, deductions for charitable donations and medical claims less than this amount do not require receipts.

Used in functions:

txqitax

Compute taxable income (Quebec)

#### QTAP: Quebec Tax Abatement Proportion of Basic Federal Tax

Quebec residents are given a refundable tax credit on their federal taxes. This proportion is applied to Basic Federal Tax.

Used in functions:

txcalc

Calculate federal income tax

#### QTRP: Quebec Tax Reduction Proportion

Quebec Basic Provincial Tax is reduced by this proportion.

Used in functions:

txprov

Compute provincial taxes

## QTX: Quebec Income Tax Table

This table represents the Taxable Income/Tax Rate tax curve for Quebec. The first column represents a level of taxable income defining the lower limit of a range. The second column is the amount of Basic Provincial Tax payable at the corresponding taxable income. The third column represents the marginal tax rate for the income range. Only the first and third columns of this table need be specified in the parameter file.

Used in functions:

txprov

Compute provincial taxes

## QYCR: Quebec Exemption Reduction Rate for Children 16 or 17

In the calculation of taxable income for Quebec Provincial Income Tax, this is the proportion of the dependant's net income in excess of QYCT which is used to reduce the young child exemption.

txqhstr

Apply tax transfers between head and spouse (Quebec)

#### QYCT: Quebec Exemption Turndown for Children 16 or 17

In the calculation of taxable income for Quebec Provincial Income Tax, a specified portion (QYCR) of the dependant's net income in excess of this amount is used to reduce the young child exemption.

Used in functions:

txqhstr

Apply tax transfers between head and spouse (Quebec)

#### QYCX: Quebec Exemption for Children 16 or 17

In the calculation of taxable income for Quebec Provincial Income Tax, dependants aged 16 or 17 years may be claimed for this exemption.

Used in functions:

txqhstr

Apply tax transfers between head and spouse (Quebec)

#### QYIDL: Quebec Deduction Limit for Investment Income

The Investment Income Deduction for Quebec Provincial Income Tax is the lower of investment income exclusive of carrying charges (idiint + imigapgt + imidivt - idcarry) and this value.

Used in functions:

txqitax

Compute taxable income (Quebec)

## QYPDL: Quebec Deduction Limit for Pension Income

In calculating taxable income for Quebec Provincial Income Tax, this parameter represents the maximum level of pension income (idipens) that may be claimed as a deduction.

Used in functions:

txqitax

Compute taxable income (Quebec)

#### RRSPEINC: Increment to idrrsp if Condition and idrpp>0

This parameter, defined in the database adjustment parameter file, is one of a group of parameters which allow the user to modify (generally increase) base year database values for RRSP contributions. RRSPEINC will be added to the RRSP contributions of all persons covered by a registered pension plan whose current RRSP contributions fall between RRSPEMIN and RRSPEMAX.

## RRSPEMAX: Maximum (idrpp + idrrsp) for Increment if idrpp>0

This parameter, defined in the database adjustment parameter file, is one of a group of parameters which allow the user to modify (generally increase) base year database values for RRSP contributions. Please see the description of RRSPEINC.

## RRSPEMIN: Minimum (idrpp + idrrsp) for Increment if idrpp>0

This parameter, defined in the database adjustment parameter file, is one of a group of parameters which allow the user to modify (generally increase) base year database values for RRSP contributions. Please see the description of RRSPEINC.

## RRSPIFLAG: idrrsp Increment Activation Flag

This parameter, defined in the database adjustment parameter file, activates a group of parameters which allow the user to modify (generally increase) base year database values for RRSP contributions. Please see the description of RRSPEINC and RRSPSINC.

#### RRSPSINC: Increment to idrrsp if Condition and idrpp=0

This parameter, defined in the database adjustment parameter file, is one of a group of parameters which allow the user to modify (generally increase) base year database values for RRSP contributions. RRSPSINC will be added to the RRSP contributions of all persons not covered by a registered pension plan whose current RRSP contributions fall between RRSPSMIN and RRSPSMAX.

## RRSPSMAX: Maximum (idrrsp) for Increment if idrpp=0

This parameter, defined in the database adjustment parameter file, is one of a group of parameters which allow the user to modify (generally increase) base year database values for RRSP contributions. Please see the description of RRSPSINC.

## RRSPSMIN: Minimum (idrrsp) for Increment if idrpp=0

This parameter, defined in the database adjustment parameter file, is one of a group of parameters which allow the user to modify (generally increase) base year database values for RRSP contributions. Please see the description of RRSPSINC.

## SAELDOPT: SA for Elderly Calculation Method

When the value of SAEFLAG is set to 1, this parameter determines the way in which Social Assistance Payments (imisa) will be calculated for the elderly. There are three valid values for SAELDOPT:

- 1 Social Assistance is set to zero for all persons over age 65
- 2- Social Assistance (imisa) is set to zero for individuals age 65 and over receiving simulated GIS Supplementation Benefits (imgist), otherwise it is set equal to Reported Social Assistance (idisa).
- 3 Social Assistance is set equal to the positive difference between reported social assistance and simulated GIS supplements

imida = idisa - imigist

#### Used in functions:

sa Compute social assistance or guarantees

#### SAFLAG: Federal Social Assistance Flag

When SAFLAG is set to 1, social assistance is calculated, otherwise Modelled Social Assistance (imisa) is set to zero. See also SAELDOPT and the sa function description.

Used in functions:

sa

Compute social assistance or guarantees

#### SAMPLE: Size of Sample Obtained

This parameter reports the proportion of sample used for processing. Valid values range from 0 to 1. Should the user interrupt a model run in progress the correct sampling ratio will be calculated and output in the control parameter (.cpr) file.

#### SAMPLEREQ: Size of Sample Requested

This control parameter allows the user to indicate the size of the sample requested for processing. The size of the sample actually obtained will be recorded in SAMPLE, and may differ from SAMPLE for a number of reasons among which are:

- The input database file given by INPSPD had fewer records than required to generate the requested sample.
- The input results file given by INPBASMRS had fewer records than required because it was generated with a sample smaller than SAMPLEREQ.
- An SPSM execution always occurs with an integral number of households, therefore the resulting sample may deviate slightly from that requested.

## SASFLAG: SAS Output Facility Activation Flag

This control parameter if used to activate the SAS native file output facility. A self-documenting file with name OUTSAS in SAS Version 6 format is produced containing variables given by SASVARS rolled up to the level specified by SASUNIT. Please see the SPSM User's Guide for more information.

## SASKC: Saskatchewan GIS Supplement: Married Pensioners

Maximum annual Saskatchewan Income Plan benefits for each person in a married couple where both receive OAS/GIS. Calculated as a sum of monthly maximums.

Used in functions:

qist

Compute Provincial GIS top-ups for elderly

## SASKMINC: Saskatchewan GIS Supplement Minimum Benefits: Married

Minimum annual Saskatchewan Income Plan benefits for each person in a married couple where both receive OAS/GIS. Calculated as a sum of monthly minimums.

Used in functions:

gist

Compute Provincial GIS top-ups for elderly

## SASKMINS: Saskatchewan GIS Supplement Minimum Benefits: Single

Minimum annual Saskatchewan Income Plan benefits for single persons, or a married GIS recipient whose spouse is not receiving OAS/GIS/SPA. Calculated as a sum of monthly minimums.

Used in functions:

gist

Compute Provincial GIS top-ups for elderly

## SASKRR1: Saskatchewan GIS Supplement Reduction Rate: Regular

Saskatchewan Income Plan reduction rate for single pensioners and married pensioners who are both eligible. This rate is expressed as a proportion of the actual GIS dollar reduction.

Used in functions:

gist

Compute Provincial GIS top-ups for elderly

## SASKRR2: Saskatchewan GIS Supplement Reduction Rate: 1 GIS

Saskatchewan Income Plan reduction rate for married pensioners whose spouses are not eligible for OAS/GIS. This rate is expressed as a dollar reduction for each one dollar actual GIS dollar reduction.

gist

Compute Provincial GIS top-ups for elderly

## SASKRR3: Saskatchewan GIS Supplement Reduction Rate: SPA

Saskatchewan Income Plan reduction rate for married pensioners whose spouses are receiving SPA. This rate is expressed as a dollar reduction for each one dollar actual GIS dollar reduction.

Used in functions:

gist

Compute Provincial GIS top-ups for elderly

#### SASKS: Saskatchewan GIS Supplement: Single Pensioners

Maximum annual Saskatchewan Income Plan benefits for single persons, or a married GIS recipient whose spouse is not receiving OAS/GIS/SPA. Calculated as a sum of monthly maximums.

Used in functions:

gist

Compute Provincial GIS top-ups for elderly

#### SASTITLE: SAS File Label

This control parameter, when activated by SASFLAG, gives the internal label which will be written into the header of the native SAS file given by OUTSAS. This label is used by the SAS system by certain procedures, in particular PROC CONTENTS.

## SASUNIT: SAS Output Family Level

When the SAS file output facility is activated using the SASFLAG parameter, this control parameter is used to specify the family level of analysis of the resulting file. Each record on the output file will correspond to an entity given by SASUNIT. Valid values and their meanings are given below.

## SASVARS: Variables Selected for SAS Output

This control parameter, when activated by SASFLAG, gives a list of all variables to be written to each record of the resulting SAS native file. Any SPSD/M variable, including base and variant values, may be included.

## SECF: CPP/QPP Contribution Rate on Self-employment Earnings

In the calculation of CPP contributions on self-employment earnings, this rate is applied to idisenf plus idisefm.

Used in functions:

txinet

Compute net income

#### SEED: Random Number Generator Seed

This vector control parameter is used to start the streams of pseudo-random numbers used in the model. Up to 20 independent random numbers are generated for each individual and are stored in the variables idrand0 through idrand19. A different sequence of numbers for each activated stream can be generated by changing SEED. The number of streams activated is determined by the number of elements in SEED. Random numbers are be used to apply social program or demographic take-up rates.

## SELFLAG: Selection Facility Activation Flag

The SELFLAG control parameter is used to activate the SPSM selection facility. When SELFLAG is set to 1, the expression in SELSPEC is evaluated for each individual and the result (if true) is propagated to families at the SELUNIT level of analysis. Only individuals (or families) marked as selected will be included in any generated files or reports.

#### SELSPEC: Selection Specification

This control parameter, when activated by SELFLAG, is used to specify whether an individual is to be marked as selected or not for the purposes of output and reporting. The expression if evaluated for each individual and is considered true if the result is non-zero. Any SPSD/M variables, including base and variant tax/transfer variables, may be used in SELSPEC. Please see the SPSM User's Guide for more information.

#### SELUNIT: Selection Facility Family Level

This control parameter, when activated by SELFLAG, is used to specify the level to which individual selection (computed by applying the expression in SELSPEC) is to be propagated. If SELUNIT is 0, selection remains at the level of individual. If SELUNIT is 1, 2, 3, or 4, then selection of any individual in the family unit implies selection of all members in the unit. Valid values of SELUNIT and their meanings are given below.

- 0 Individual
- 1 Nuclear Family
- 2 Census Family
- 3 Economic Family
- 4 Household

## SFAOUT: Proportion of Federal Social Assistance to Eliminate

This parameter is used in runs which require the substitution of Federal Social Assistance with alternative programs (e.g., guaranteed income).

Used in functions:

sa

Compute social assistance or guarantees

#### SFTAX: Saskatchewan Provincial Flat Surtax Rate on Net Income

Beginning in 1984, a surtax was applied to Saskatchewan Provincial Tax based on this fraction of net income.

Used in functions:

txprov

Compute provincial taxes

## SPAFE: SPA Takeup Rate: Eligible Female Widow

These are probabilities applied to determine eligible female population for extended SPA. Eligibility is determined from the probability that a widow(er) currently aged 60-64 had a spouse aged 65+ at the time of his(her) death.

For widow(er)s currently aged 60, these probabilities are approximated by applying 1980-82 mortality rates for the married population to the age distribution of spouses as tabulated from the 1981 Census. This provides a distribution for the age at death of the spouse. The probability of eligibility is the ratio of spouse deaths at ages 65+ to all spouse deaths.

For widow(er)s currently aged 61-64, allowance is made for the possibility that the death took place in a previous year. In that event, age at death distributions are calculated as before and aggregated over the 2-4 year intervals in which the death might have occurred. Aggregation involves adjustment for the mortality of the widowed partner. In this case, the probability of eligibility is the ratio of spouse deaths at age 65+ with surviving partners to all spouse deaths with surviving partners.

Used in functions:

gis

Compute GIS/SPA for elderly

## SPAME: SPA Takeup Rate: Eligible Male Widower

Probabilities applied to determine eligible male population for extended SPA. See description for SPAFE.

Used in functions:

gis

Compute GIS/SPA for elderly

#### SPAOASRR: OAS Portion of SPA Reduction Rate

Reduction rate applied to the OAS portion of Spouses Allowance, Extended Spouses Allowance and Widowed Spouses Allowance.

Used in functions:

gis

Compute GIS/SPA for elderly

mpc

Calculate derived model parameters and do edits

## SPARL: SPA Reduction Point: One Married/Widowed

The level of previous year annual family income above which the OAS portion of the SPA starts to be paid at a reduced rate to a married or widowed SPA recipient.

gis

Compute GIS/SPA for elderly

## SPAT: SPA Take-up Rate by SPA Benefit Level

Probability by SPA benefit level group of applying for the Spouses Allowance for an eligible married person.

Used in functions:

gis

Compute GIS/SPA for elderly

#### SPAXO: Benefit Cross-over GIS/SPA vs GIS One Pensioner

SPAXO represents the level of family income at which the dollar benefits for GIS to a single pensioner married to a non-pensioner spouse exactly equal the combined GIS/SPA dollar benefits payable to a GIS/SPA married couple. The figure is calculated as a fixed relationship to other input parameters as follows.

SPAXO = 2\*MP.GISBE2-MP.GISBE1;

Used in functions:

gis

Compute GIS/SPA for elderly

mpc

Calculate derived model parameters and do edits

#### SPTF: Saskatchewan Provincial Tax Fraction

Saskatchewan Basic Provincial Income Tax (imbpt) is calculated as a proportion of Basic Federal Tax using this factor.

Used in functions:

txprov

Compute provincial taxes

#### SSCI: Saskatchewan Surtax Cut-in

This is the level of Basic Saskatchewan Income Tax above which the surtax (at rate SSF) is applied.

Used in functions:

txprov

Compute provincial taxes

#### SSF: Saskatchewan Provincial Surtax Fraction

This is the surtax rate applied to Basic Saskatchewan Income Tax in excess of the amount SSCI.

Used in functions:

txprov

Compute provincial taxes

#### STC: Spouse or Equivalent Tax Credit

If the parameter PEROPT is set to 2 (for tax credits), all married filers are eligible to claim this amount for the spouse tax credit, subject to reductions based on the spouse's net income.

Used in functions:

mpc txhstr Calculate derived model parameters and do edits Apply tax transfers between head and spouse

STCEL: Spouse Tax Credit Income Limit

This parameter is calculated as the spouse's income above which there is no Spouse Tax Credit. It is used only if PEROPT is set to 2 (for tax credits).

Used in functions:

mpc

Calculate derived model parameters and do edits Apply tax transfers between head and spouse

STCR: Spouse Tax Credit Rate

txhstr

The proportion of net income exceeding the turndown level (STCT) which reduces the Spouse Tax Credit. This parameter is used only if PEROPT is set to 2 (for tax credits).

Used in functions:

mpc

txhstr

Calculate derived model parameters and do edits Apply tax transfers between head and spouse

STCT: Spouse Tax Credit Turndown Level

The level of net income above which the spouse tax credit begins to be reduced. This parameter is used only if PEROPT is set to 2 (for tax credits).

mpc txhstr Calculate derived model parameters and do edits Apply tax transfers between head and spouse

#### STDED: Standard Deduction from Net Income

The standard deduction for medical claims and charitable contributions was eliminated in 1984. Before 1984, no receipts were necessary for medical claims and charitable contributions under this amount.

Used in functions:

txitax

Compute taxable income

#### STDFA: Standard Federal Family Allowance Per Child

The annual maximum standard federal Family Allowance per child for all provinces except Alberta and Quebec.

Used in functions:

fa

Compute family allowance

#### STRBR: Saskatchewan Basic Provincial Tax Reduction

A reduction in Basic Saskatchewan Provincial Income Tax of this amount is allowed for all Saskatchewan filers. This tax reduction is augmented for senior citizens and filers with children. It is reduced by a proportion of Saskatchewan Tax Payable (STRRR) exceeding the total tax reductions.

Used in functions:

txprov

Compute provincial taxes

#### STRCL: Saskatchewan Child Tax Reduction Limit

The maximum total tax reduction (number of children times STRPC) allowed in the calculation of the Saskatchewan Provincial Tax Reduction.

Used in functions:

txprov

Compute provincial taxes

#### STRPC: Saskatchewan Tax Reduction Per Child

A tax reduction of this amount is applied for all children under the age of 18 years in the calculation of the Saskatchewan Provincial Tax Reduction.

Used in functions:

txprov

Compute provincial taxes

#### STRRR: Saskatchewan Tax Reduction Reduction Rate

This parameter represents the rate at which total Saskatchewan Provincial Income Tax reduction is reduced. This is applied to basic Saskatchewan income tax exceeding the total tax reductions (STRBR, SSCI, and the total tax reduction on behalf of children).

Used in functions:

txprov

Compute provincial taxes

#### STRSC: Saskatchewan Tax Reduction for Senior Citizens

All Saskatchewan filers age 65 and over receive a reduction in provincial income taxes of this amount.

Used in functions:

txprov

Compute provincial taxes

## TOAFLAG: Table OA Request Flag

This control parameter, when set to 1, activates hard-wired Table 0A, which contains counts of units having non-zero values for various variables. The level of analysis is specified by the TABUNIT parameter.

## TOFLAG: Table O Request Flag

This control parameter, when set to 1, activates hard-wired Table 0, which contains counts and sums of various variables. The level of analysis is specified by the TABUNIT parameter.

#### TIAFLAG: Table 1A Request Flag

This control parameter, when set to 1, activates hard-wired Table 1A, which contains counts of units having non-zero values for various variables by province. The level of analysis is specified by the TABUNIT parameter.

#### TIFLAG: Table 1 Request Flag

This control parameter, when set to 1, activates hard-wired Table 1, which contains counts and sums of various variables by province. The level of analysis is specified by the TABUNIT parameter.

## T2AFLAG: Table 2A Request Flag

This control parameter, when set to 1, activates hard-wired Table 2A, which contains counts of units having non-zero values for various variables by income classes as determined by the breakpoints specified in the INCGP parameter. The level of analysis is specified by the TABUNIT parameter.

## T2FLAG: Table 2 Request Flag

This control parameter, when set to 1, activates hard-wired Table 2, which contains counts and sums of various variables by income classes as determined by the breakpoints specified in the parameter INCGP. The level of analysis is specified by the TABUNIT parameter.

## T3AFLAG: Table 3A Request Flag

This control parameter, when set to 1, activates hard-wired Table 3A, which contains counts of units having non-zero values by family type. The level of analysis is specified by the TABUNIT parameter.

#### T3FLAG: Table 3 Request Flag

This control parameter, when set to 1, activates hard-wired Table 3, which contains counts and sums of various variables by family type. The level of analysis is specified by the TABUNIT parameter.

#### T4AFLAG: Table 4A Request Flag

This control parameter, when set to 1, activates hard-wired Table 4A, which contains counts of units having non-zero values by poverty threshold ratio classes given by PVRAT and PTF. The level of analysis is specified by the TABUNIT parameter.

#### T4FLAG: Table 4 Request Flag

This control parameter, when set to 1, activates hard-wired Table 4A, which contains counts and sums of various variables by poverty threshold ratio classes given by PVRAT and PTF. The level of analysis is specified by the TABUNIT parameter.

## TABDELTA: Hard-wired Tables Winner/Loser Threshold

This is the dollar amount used to determine winners and losers for purposes of producing certain rows of the hard-wired tables. The difference in consumable income between base and variant is compared to TABDELTA at the TABUNIT level of analysis to determine a winner or loser.

## TABUNIT: Hard-wired Tables Family Level

Reporting variables are summed over the family unit specified by TABUNIT in order to produce the hard-wired tables. Valid values and their meanings are given below.

- 0 Individual
- 1 Nuclear Family
- 2 Census Family
- 3 Economic Family
- 4 Household

## TARGETYEAR: Year of Analysis

This parameter controls the phasing in of certain social support programs. Valid values

Used in functions:

gist oas

Compute Provincial GIS top-ups for elderly

Compute OAS for elderly

## TAXCRR: Tax Credit Transfer Reduction Rate

The proportion of net income above the tax credit transfer turndown level (TAXCRT) by which the total available tax credits to be transferred from a spouse is reduced. This parameter is in effect only when the value of PEROPT is set to 2 (for tax credits).

Used in functions:

txcalc

Calculate federal income tax

## TAXCRT: Tax Credit Transfer Turndown Level

The level of individual net income above which the transfer of tax credits between spouses begins to be allowed at a reduced rate. This parameter is in effect only when the value of PEROPT is set to 2 (for tax credits).

Used in functions:

txcalc

Calculate federal income tax

# TUITOPT: Tuition Deduction/Tax Credit Option

This parameter controls the tax treatment of the Tuition Deduction. With a value of 1, the tuition fees (prtuitn) are treated as a deduction from net income and with a value of 2,

Used in functions:

txinet

Compute net income

#### TUTCR: Tuition Tax Credit Rate

The proportion of tuition fees that may be claimed as a Tax Credit. If the parameter EDUCOPT is set to 2 (for tax credits), the imputed value of tuition deduction is multiplied by this rate to calculate the tuition tax credit.

Used in functions:

txinet

Compute net income

## **UER:** Unemployment Rate

Regionalization for the UI algorithm is based on urban size classes within province (the lowest level of geographic detail available for public release). Regional rates are represented in a table ten rows (provinces) by five columns (size classes). Codes of 0.0 are used where a given urban size class does not exist. In certain cases (e.g. Newfoundland), size classes have been collapsed for reasons of confidentiality. Only one value is used in PEI, since although it has two size classes, there is only one UI region. Regional unemployment rates are proportional to the ratio of person-weeks of unemployment to person weeks in the labour force recorded on the data base. However, the rates have been adjusted to agree with provincial unemployment rates.

Source: SPSD and Labour Force Survey Data.

Used in functions:

ui

Compute UI benefits

## UIBASEYRMAX: Maximum Insurable Earnings for Base Year

Dollar value of maximum insurable earnings.

## UIBASFLAG: Basic Phase Calculation Flag

Flag which determines whether the initial phase benefits are to be computed (value 1), or not (value 0). This feature of the model permits the program structure to be varied, by deleting a phase.

Used in functions:

ui

Compute UI benefits

#### UIBASRATE: Benefit Rate for Basic Phase

Benefit rate as a proportion of weekly insurable earnings. This parameter is not used if the flag UIEFFFLAG is set to 0.

Used in functions:

ui

Compute UI benefits

#### UIBRA: UI Benefit Recovery Base Amount

If UI benefits (imiuib) have been received, a proportion (UIBRP) of net income in excess of this amount or of total benefits is repayable.

Used in functions:

txitax

Compute taxable income

## **UIBRP: UI Benefit Recovery Portion**

If unemployment insurance benefits (imiuib) have been received and net income is in excess of the base amount (UIBRA), this proportion is applied to the lower of (a) total UI benefits and (b) the excess net income, to calculate the repayment which is also a deduction from net income.

Used in functions:

txitax

Compute taxable income

## UICOPT: UI Contributions Deduction/Tax Credit Option

This parameter controls the tax treatment of Unemployment Insurance contributions, imuic. With a value of 1, Unemployment Insurance Contributions are treated as deductions from net income and with a value of 2, a proportion UICTR of UI contributions are taken as a tax credit.

Used in functions:

txinet

Compute net income

#### **UICTR:** UI Contribution Tax Credit Rate

The proportion of Unemployment Insurance contributions that may be claimed as a tax credit. This parameter is used only if UICOPT is set to 2 (for tax credits).

txinet

Compute net income

### UIEFFFLAG: Observed Effective Weekly Benefit Rate Flag

Flag determines that UI benefits are computed from the average benefit per week observed in sample claims. The effective benefit rate may be higher than 60% of weekly insurable earnings if special programs were in effect (e.g., job creation) or lower if the sampled claimant reported earnings while on claim.

When the flag is set to 1, the effective weekly benefit rate is used in the calculation of UI benefits. When the flag is set to 0, the values of the parameters UIBASRATE, UILFERATE, UIRGERATE have no effect on the simulation results.

Source: UI Administrative Data.

Used in functions:

ui

Compute UI benefits

UIERNMAX: Maximum Insurable Earnings

Dollar value of maximum weekly insurable earnings.

Used in functions:

ui

Compute UI benefits

# UIFSHMINWK: Minimum Weeks to Qualify for Fishing Benefits

This parameter represents the minimum weeks of insurable employment in the qualifying period that are required for eligibility for UI fishing benefits. At present, the standard algorithm does not subject fishing claims to an eligibility test.

Used in functions:

ui

Compute UI benefits

# UILFEFLAG: Labour Force Extended Phase Calculation Flag

Flag which determines whether the labour force extended phase benefits are to be computed (value 1), or not (value 0). This feature of the model permits the program structure to be varied, by deleting a phase.

ui

Compute UI benefits

### UILFEMIN: Weeks Worked In Qualifying Period

The second phase of regular benefits is the Labour Force Extended phase. Additional weeks of benefit entitlement (UILFEWKS) are determined by the weeks of work in the qualifying period (UILFEMIN). These two vectors must always have 14 elements corresponding exactly to each other.

Used in functions:

ui

Compute UI benefits

### UILFERATE: Benefit Rate for Labor Force Extended Phase

Benefit rate as a proportion of weekly insurable earnings. This parameter is not used if the flag UIEFFFLAG is set to 0.

Used in functions:

ui

Compute UI benefits

### UILFEWKS: Weeks LFE Entitlement

The maximum weeks of entitlement in the Labour Force Extended Phase. Additional weeks of benefit entitlement are determined by the weeks of work in the qualifying period (UILFEMIN). The two vectors UILFEMIN and UILFEWKS must always have 14 elements corresponding exactly to each other.

Used in functions:

ui

Compute UI benefits

# UIMATMINWK: Minimum Weeks to Qualify for Maternity Benefits

This parameter represents the minimum weeks of insurable employment in the qualifying period that are required for eligibility for UI maternity benefits.

Used in functions:

ui

Compute UI benefits

UIMAXBASEWKS: Maximum Weeks on the Initial Phase (Regular)

Regular benefits are paid in three successive phases. This parameter represents the maximum duration of the initial phase.

Used in functions:

ui

Compute UI benefits

UIMAXDUR: Maximum Duration of a UI Claim

The maximum weeks of benefits payable on a given claim (all phases combined).

Used in functions:

ui

Compute UI benefits

UIMAXFSHWKS: Maximum Number of Weeks - Fishing

The operational maximum weeks of entitlement to fishing benefits. However, benefits are paid to self-employed fishermen only from November 1<sup>st</sup> to May 15<sup>th</sup>.

Used in functions:

ui

Compute UI benefits

UIMAXMATWKS: Maximum Number of Weeks - Maternity

The maximum weeks of entitlement to maternity benefits. However, maternity claims may be changed to regular claims.

Used in functions:

ui

Compute UI benefits

UIMAXRETWKS: Maximum Number of Weeks - Retirement

The maximum weeks of entitlement to retirement benefits.

Used in functions:

ui

Compute UI benefits

### UIMAXSICWKS: Maximum Number of Weeks - Sickness

The maximum weeks of entitlement to sickness benefits. However, sickness claims may be changed to regular claims.

Used in functions:

ui

Compute UI benefits

### **UIPF: UI Contribution Rate on Earnings**

The proportion of UI insurable earnings payable as UI contributions.

Used in functions:

txinet

Compute net income

# UIREGMINWK: Minimum Weeks to Qualify for Regular Benefits

This parameter represents the minimum weeks of insurable employment in the qualifying period that are required for eligibility for UI regular benefits.

Used in functions:

ui

Compute UI benefits

# UIREPPREV: Weeks of Insurable Employment

The number of weeks of insurable employment required for repeaters to be eligible for benefits increases with the number of weeks of benefits received in the qualifying period (see also UIREPUER and UIREPWWKD). The vector UIREPPREV must always have 11 elements corresponding to the columns of UIREPWWKD.

Used in functions:

ui

Compute UI benefits

# UIREPUER: Regional Unemployment Rate

The number of weeks of insurable employment required for repeaters to be eligible for benefits decreases at progressively higher regional unemployment rates (see also UIREPPREV and UIREPWWKD). The vector UIREPUER must always have 5 elements corresponding to the rows of UIREPWWKD.

ui

Compute UI benefits

### UIREPWWKD: Repeater Eligibility Requirements

The number of weeks of insurable employment required for repeaters to be eligible for benefits increases with the number of weeks of benefits received in the qualifying period (UIREP-PREV) and decreases at progressively higher regional unemployment rates (UIREPUER). UIREPWWKD represents a two dimensional (11 by 5) lookup table of the weeks of work required for repeater eligibility,

Used in functions:

ui

Compute UI benefits

### UIRETMINWK: Minimum Weeks to Qualify for Retirement Benefits

This parameter represents the minimum weeks of insurable employment in the qualifying period that are required for eligibility for UI retirement benefits.

Used in functions:

ui

Compute UI benefits

### UIRGEFLAG: Regional Extended Phase Calculation Flag

Flag which determines whether the regional extended phase benefits are to be computed (value 1), or not (value 0). This feature of the model permits the program structure to be varied, by deleting a phase.

Used in functions:

ui

Compute UI benefits

# UIRGEMIN: Unemployment Rate for Regional Extended Entitlement

The third phase of regular benefits is the Regional Extended phase. Additional weeks of benefit entitlement are determined by the regional unemployment rate (see UIRGEWKS). Cut-points represent the lower bound of class intervals (the lowest possible unemployment rate is coded as -1.0). The vectors UIRGEMIN and UIRGEWKS must always have 17 elements corresponding exactly to each other.

ui

Compute UI benefits

# UIRGERATE: Benefit Rate for Regional Extended Phase

Benefit rate as a proportion of weekly insurable earnings. This parameter is not used if the flag UIEFFFLAG is set to 0.

Used in functions:

ui

Compute UI benefits

### UIRGEWKS: Weeks Regional Extended Entitlement

The third phase of regular benefits is the Regional Extended phase. Maximum additional weeks of benefit entitlement (UIRGEWKS) are determined by the regional unemployment rate (UIRGEMIN). Cut-points represent the lower bound of class intervals (the lowest possible unemployment rate is coded as -1.0). These two vectors must always have 17 elements corresponding exactly to each other.

Used in functions:

ui

Compute UI benefits

# UIRGNFLAG: Regional Requirements Flag

Flag which determines whether variable UI entrance requirements based on regional unemployment rates are used (value 1), or not (value 0).

Used in functions:

ui

Compute UI benefits

# UIRGNMIN: Regional Unemployment Rate

The UIRGNWKS parameter represents the number weeks of insurable employment in the qualifying period that are required for regular benefits in relation to the unemployment rate of UI economic regions.

Eligibility is finally determined by comparing weeks of insurable employment in the qualifying period (UIRGNWKS) to the level required in relation to local (UI Economic Region) unemployment rates. Cut points for unemployment rates are given as lower bounds (the minimum possible unemployment rate is coded as -1.0). The vectors UIRGNMIN and UIRGNWKS must always have 5 elements corresponding exactly to each other.

ui

Compute UI benefits

### UIRGNWKS: Weeks Required for Eligibility

This parameter represents the number weeks of insurable employment in the qualifying period that are required for regular benefits in relation to the regional unemployment rates. The vectors UIRGNMIN and UIRGNWKS must always have 5 elements corresponding exactly to each other.

Used in functions:

ui

Compute UI benefits

### UIRPTFLAG: Repeater Requirements Flag

This flag determines whether UI repeater rules are applied (value 1) in testing eligibility or not applied (value 0).

Used in functions:

ui

Compute UI benefits

### UISICMINWK: Minimum Weeks to Qualify for Sickness Benefits

This parameter represents the minimum weeks of insurable employment in the qualifying period that are required for eligibility for UI sickness benefits.

Used in functions:

ui

Compute UI benefits

# UITARGYRMAX: Maximum Insurable Earnings for Target Year

The maximum weekly earnings insurable under the provisions of the UI program for the target year. The value defined by the UI ACT is updated annually in relation to a moving average of earnings determined from Revenue Canada data.

# UIWAITWKS: Minimum Waiting Period All Claims

This parameter determines the minimum interval between the last week worked and the first week of UI benefits.

Used in functions:

ui

Compute UI benefits

### VARDESC: Description of Variant Parameters

This control parameter is automatically generated by SPSM, and is simply a copy of the MPRDESC parameter of the variant. The value will appear in the page header of the output table file.

# VARALG: Name of Variant Algorithms

This control parameter is automatically generated by SPSM, and records the overall name of the tax/transfer algorithm used to generate variant results.

# VARMETH: Method of Creating Variant Variables

This parameter specifies one of three methods for producing variant results. Valid values are:

- 0 No variant results will be calculated
- 2 Results will be calculated using the standard algorithm with tax/transfer parameters as specified in the INPVARMPR file.
- 3 Results will be calculated using the alternate algorithm with tax/transfer parameters specified in the INPVARMPR file.

### VPTF: Nova Scotia Provincial Tax Fraction

Nova Scotia Basic Provincial Income Tax (imbpt) is calculated as a proportion of Basic Federal Tax using this factor.

txprov

Compute provincial taxes

### WGTTOT: Sum of Household Weights

This control parameter specifies the total sum of weights on the input weight file. This value is generated by SPSM automatically and is reproduced here for informational purposes.

# WSCF: CPP/QPP Contribution Rate On Employment Earnings

In the calculation of CPP contributions, this is the rate applied to earnings from employment.

Used in functions:

txinet

Compute net income

### WSCM: Ratio SECF/WSCF

The ratio of the CPP/QPP contribution rate on earnings from self-employment to the rate on earnings from employment. This is used in calculating the amount payable on earnings from self-employment.

Used in functions:

txinet

Compute net income

### XTCOLS: X-tab Desired Print Width

This control parameter, when activated by XTFLAG, specifies the width desired for table reports. It is used to improve the appearance of tables, but does not guarantee that the table will fit within the bounds specified. Please see the SPSM User's Guide for more information.

# XTFLAG: X-tab Facility Activation Flag

This control parameter activates the SPSM cross tabulation facility. The cross-tabulation facility allows the user to generate multidimensional tables of his or her own design. Please see the SPSM User's Guide for more information.

# XTLINES: X-tab Desired Lines Per Page

This control parameter, when activated by XTFLAG, specifies the number of lines per page available on the user's output device. It is used to pack tables onto pages efficiently, but cannot be used to split tables with many lines across pages in a sensibly formatted fashion. Please see the SPSM User's Guide for more information.

# XTSPEC: X-tab Specification

This control parameter, when activated by XTFLAG, specifies the tables requested by the user. As the syntax of table specification is rather complicated, please see the SPSM User's Guide for more information.

# YCTC: Young Child Tax Credit

If the parameter PEROPT is set to 2 (for tax credits), each child may be claimed for a tax credit of this amount, subject to reductions based on the child's net income.

#### Used in functions:

mpc txhstr Calculate derived model parameters and do edits Apply tax transfers between head and spouse

# YCTCR: Young Child Tax Credit Rate

The proportion of net income exceeding the turndown level (YCTCT) which reduces the dependant tax credit. This parameter is used only if PEROPT is set to 2 (for tax credits).

#### Used in functions:

mpc txhstr Calculate derived model parameters and do edits Apply tax transfers between head and spouse

# YOTOT: Young Child Tax Credit Turndown Level

The level of net income of a dependant, aged 17 or younger, above which the dependant tax credit begins to be reduced at the rate YCMXR. This parameter is used only if PEROPT is set to 2 (for tax credits).

Used in functions:

mpc txhstr Calculate derived model parameters and do edits Apply tax transfers between head and spouse

# YCTEL: Young Child Tax Credit Income Limit

This parameter is calculated as the income level above which there is no Young Child Tax Credit. It is used only if PEROPT is set to 2 (for tax credits).

Used in functions:

mpc txhstr Calculate derived model parameters and do edits Apply tax transfers between head and spouse

# YCXM: Exemption for Wholly Dependent Child 0 -17

If the parameter PEROPT is set to 1 (for personal exemptions), each wholly dependent child under the age of 18 may be claimed for an exemption of this amount, subject to reductions based on the child's net income.

Used in functions:

txhstr

Apply tax transfers between head and spouse

# YCXMR: Exemption Reduction Rate for Child 0-17

The rate at which the tax credit for children aged 0-17 is reduced by net income exceeding the turndown level (YCTCT). This parameter is used only if PEROPT is set to 1 (for personal exemptions).

Used in functions:

txhstr

Apply tax transfers between head and spouse

# YCXMT: Exemption Turndown for Child 0-17

The level of net income above which the dependant exemption begins to be reduced for dependants under the age of 18. This parameter is used only if PEROPT is set to 1 (for personal exemptions).

Used in functions:

txhstr

Apply tax transfers between head and spouse

### YINDL: Maximum Interest and Dividend Income Deduction

Interest and dividend income exclusive of carrying charges, and, optionally, taxable capital gains (depending upon the setting of the parameter CGIFLAG) are eligible to be claimed for the Interest and Dividend Income Deduction. This parameter determines the maximum possible deduction. If YINDL is set to 0, the value of the deduction is zero.

Used in functions:

txitax

Compute taxable income

# YMPE: CPP/QPP Maximum Pensionable Earnings

The yearly maximum employment earnings for calculating contributions to the CPP/QPP. Note that this is the sum of (a) the Basic CPP Exemption (CPPXM) and (b) maximum earnings subject to contribution as defined in the T1 tax form.

Used in functions:

txinet

Compute net income

# YPNDL: Maximum Pension Income Deduction

When YPNOPT is set to 1 (for personal exemptions), then this is the maximum dollar amount of pension income which may be claimed as a deduction.

Used in functions:

txitax

Compute taxable income

# YPNOPT: Pension Income Deduction/Tax Credit Option

This parameter controls the tax treatment of the Pension Income Deduction. With a value of 1, the Pension Income Deduction is treated as a deduction from net income and with a value of 2, it is treated as a tax credit.

txitax

Compute taxable income

### YPNTL: Maximum Pension Income Tax Credit

When the value of YPNOPT is set to 2 (for tax credits), then this is the maximum amount of pension income on which the Pension Income Tax Credit will be calculated.

Used in functions:

txitax

Compute taxable income

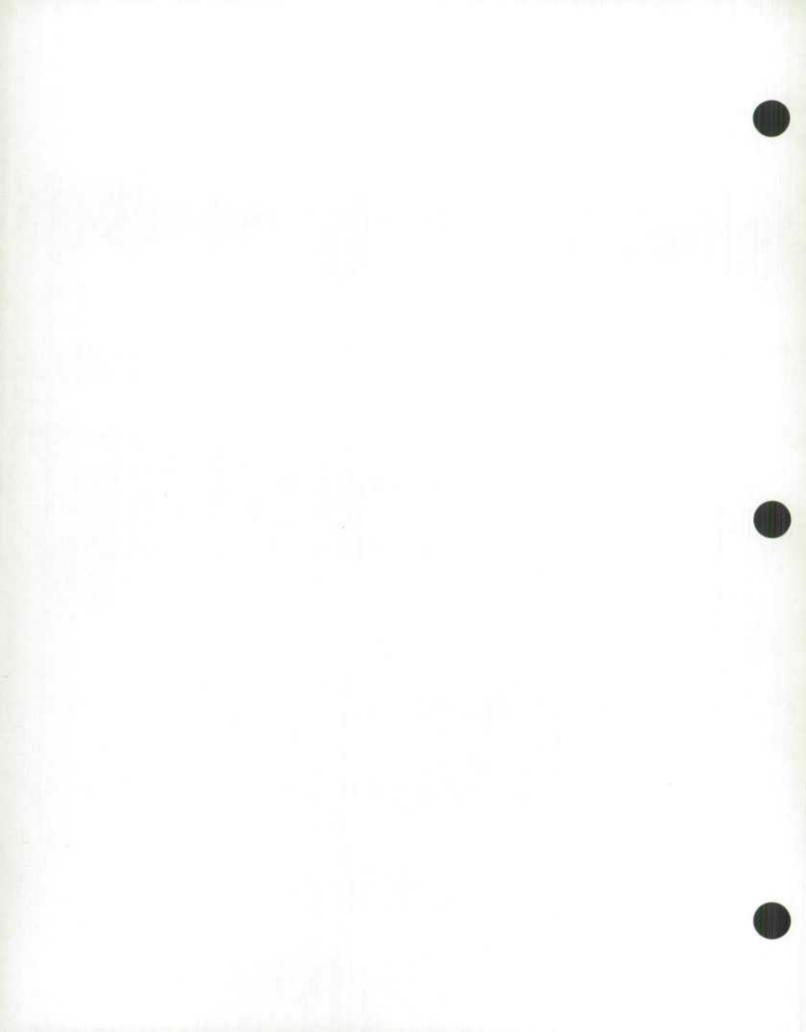

### YPNTR: Pension Income Tax Credit Rate

This is the proportion of pension income (up to a ceiling of YPNTL) which may be claimed as a tax credit. This tax credit may be transferred to the spouse.

Used in functions:

txitax

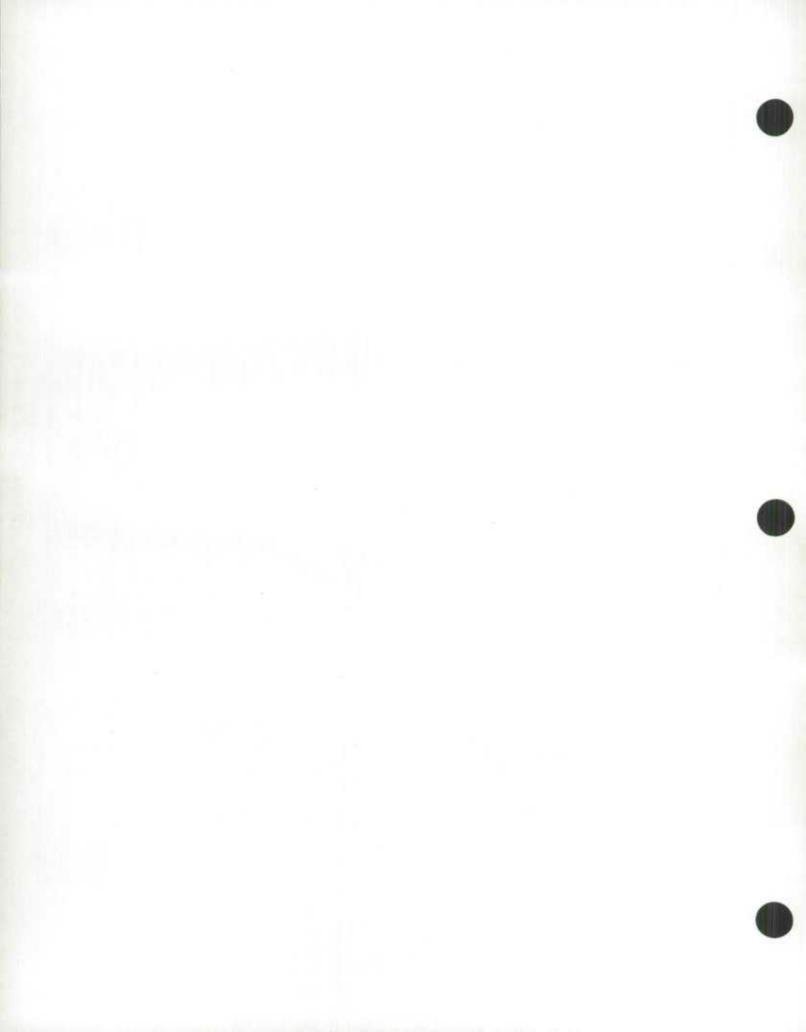

Compute taxable income

# APPENDIX A Parameter Values Provided with SPSM

#### Introduction

This appendix is a listing of the parameter values provided with the SPSD/M. There are nine variants:

Variant	Description
ba84	1984 actual
ba85	1985 actual
ba86	1986 actual
ba87	1987 actual and estimated
sq88	1988 status quo (pre-reform) and estimated
sq88y84	1988 status quo (pre-reform) and estimated, deflated to 1984 dollars
ba88	1988 reform and estimated
ba88y84	1988 reform and estimated, deflated to 1984 dollars.
ba89	1989 reform and estimated
ba89y84	1989 reform and estimated, deflated to 1984 dollars

The following sections contain the values, derivation and source for each of the variants. Depending upon the type of parameter, values may fill the first one, two or three columns. Formulas may begin in either the third or fourth column. The source, where applicable, follows a pound sign (#).

Formulae normally refer to another variant, for example:

ba85\*CPI

means that the value was derived from the base 1985 variant, multiplied by the CPI value for 1985.

In certain cases, the formula may refer to another value within the same variant, for example,

MNWEL			
File	Value	Formula	
***		****	
ba89	124.00	ba89/5	

The formula here refers to the value of MXWEL for ba89. Unfortunately, this is not made explicit by the formula and the reader is referred to the description section of the SPSD/M Parameter Guide to determine this relationship.

The notation of the formulae adheres to that of LOTUS 1-2-3 since that is the package in which the parameters are maintained. For the most part, notation is similar to high level programming languages (e.g., FORTRAN, C, BASIC). The following functions occur:

INT(x) Take integer portion of x without rounding

ROUND(x,i) Round the value x to i places

Four constants are used to inflate or deflate dollar value parameters. These are annual CPI, annual CPI minus 3 points (CPIM3), the average annual industrial wage growth (WAGE) and a deflator (DFL) which is the reciprocal of the annual CPI.

Following are the values used in the calculation of these parameters.

	84	85	86	87	88y84	88
DFL	1.000	1.000	1.000	1.000	.848	1.000
CPI	1.044	1.040	1.041	1.044	1.000	1.041
СРІМ3	1.014	1.010	1.011	1.014	1.000	1.011
WAGE	1.053	1.036	1.028	1.037	1.000	1.044

The values refer to annual average figures for the years given. The parameter value for the previous year is multiplied by the value given for the previous year to give the value for the next year. For example, the Basic Tax Credit (BTC) for 1988 is \$1,020. It is grown by CPI minus three points (CPIM3) for 1988 (1.011) to yield the value \$1,031.22 for 1989.

The source of the model parameter is often coded to conserve space. Following is a list of these codes and a fuller description of the source.

Code for Source	Description of Source
Budget, May 1985	Securing Economic Renewal Budget Papers, Department of Finance Canada (May 23, 1985)
Budget, Feb 1986	Securing Economic Renewal Budget Papers, Department of Finance Canada (February 26, 1986)
Budget, Feb 1988	Securing Economic Renewal Budget Papers, Department of Finance Canada (February 10, 1988)
HWC "Red Book", 1988	Reference Guide on Income Security Programs and Other Related Information. Data Development and Analysis, Income Security Programs Branch, Health and Welfare Canada.
Inventory of Income Security Programs	Inventory of Income Security Programs. Health and Welfare Canada. Catalog H75-16/1985E.
Income Tax Form	General Tax Guide and Return (T1), Revenue Canada Taxation. (years 1984 through 1987 including provincial returns)
Quebec Prov. Income Tax Form	Income Tax Return - Long Form, Revenu Québec. (years 1984 through 1987).
Unemployment Insurance Act	Unemployment Insurance Act, 1971
UI Statistics, STC 73-001	Unemployment Insurance Statistics, Statistics Canada, Catalog number 73-001.
UI Statistics, STC 73-202	Unemployment Insurance Statistics, Statistics Canada, Catalog number 73-202.
White Paper, June 1987	The White Paper Tax Reform 1987, Department of Finance Canada (June 18, 1987).

### Parameter Values by Program

### 2.1 Model Control Parameters

The values for this section are not included in this appendix.

### 2.2 Database Adjustment Parameters

The values for this section are not included in this appendix.

### 2.3 Government Transfers and Personal Income Taxes

### 2.3.1 Variant Description
