OF

Acreage, Production and Value, by Provinces, of
Canada's Principal Field Crops with Supplemen-
tary Data on Supply and Disposition of the
Major Grain Crops

Crop Years 1941-42—1955-56

Published by Authority of

The Right Honourable C. D. Howe, Minister of Trade and Commerce

P R E F A C E

This report is intended to be used as a supplement to the 'Handbook of Agricultural Statistics, Part I -- Field Crops', which presented data for the period 1908 to 1950 and was issued by the Bureau in 1951. Estimates published in this supplement include all revisions made up to and including those published in Crop Report No. 23 issued on November 4, 1955. The major purpose of the supplement is two-fold:

- (1) to provide in one convenient form current estimates for the period since 1950 and
- (2) to provide revised estimates for the 1941-50 period.

Estimates for the 1951-55 period have appeared previously in various issues of the Bureau's Crop Reports and other relevant publications but this is the first time these data have been brought together in one publication. With some exceptions, revised estimates for the 1941-50 period are published here for the first time. Revised estimates for this inter-censal period were necessitated to a large extent by the substitution of Census of Agriculture acreage data in 1941, 1946 and 1951 for the annual estimates made by the Bureau's Agriculture Division.

The following suggestions are offered to enable users to obtain the most value from this supplement:

- (1) The supplement, together with subsequent issues of the Bureau's Crop Reports, should be used exclusively for estimates of acreage, production and value of field crops in the period 1941-55.
- (2) The original Handbook is the best single source of information for years prior to 1941.
- (3) The supplement may be kept up to date by entering in the appropriate spaces estimates from current issues of the Bureau's Crop Reports.

While it is not feasible to include a detailed treatment on statistical techniques in a publication of this type, the following notes may be of interest to users in interpreting the various estimates.

| | |
|--------------------------------------|---|
| <u>Crop Year</u> | For all crops, the crop year begins on August 1. Estimates of seeded area, average yield and production apply to the <u>first</u> of the two years in a particular crop year, i.e. area, yield and production in the crop year 1941-42 refer to the crop that was seeded and harvested in 1941. In the case of winter wheat and fall rye, the area refers to that seeded in the fall <u>preceding</u> the crop year, i.e. area, yield and production of these two crops for the 1941-42 crop year refer to the crop seeded in the fall of 1940 and harvested in 1941. |
| <u>Seeded Area</u> | With some exceptions, seeded acreages for 1941 and 1951 (and for 1946 in the Prairie Provinces) are those obtained by the Census of Agriculture. Estimates for other years are made by the Bureau's Agriculture Division. With the exception of crops such as sugar beets for which harvested acreage data are available, acreage estimates represent seeded acreages. |
| <u>Average Yield per Seeded Acre</u> | Average yields are estimated on a field-run basis and, for all major crops, are weighted by districts within provinces. |
| <u>Production</u> | Estimates are gross estimates of production, i.e. based on average field-run yields. |
| <u>Average Farm Price</u> | This represents the average price received by farmers for all grades and varieties of each crop. |
| <u>Total Farm Value</u> | For most crops, these estimates are obtained by multiplying total production by average farm price for that part of the crop sold commercially. In the case of sugar beets, values represent payments to producers. |
| <u>Missing Data</u> | <ol style="list-style-type: none"> (1) Annual estimates are not yet available for Newfoundland. (2) Estimates for certain crops, e.g. sunflowers, rapeseed, and mustard seed, currently published in the Bureau's Crop Reports, were not available for the complete period when this report went to press. (3) Attempts are not usually made to estimate acreages or production of crops for which the area, as shown by the Census or other check data, is less than 1,000 acres. (4) All-Canada totals represent the sum of provincial estimates; no allowance is made for the relatively small area and production of crops in those provinces where individual estimates are missing. |

Rounding

Area With the exception of sugar beets for which measured data are available, estimates of area are rounded to the nearest thousand for acreages of 100,000 and over, to the nearest hundred for acreages under 100,000.

Production With the exception of sugar beets, production estimates are normally rounded to the nearest thousand units.

Total Farm Value These estimates are rounded to the nearest thousand dollars.

Source of
Subsequent
Information

It should be noted that estimates, especially for 1955, are subject to revision, details of which will be published in Crop Report No. 1, 1956. Future estimates and any revisions in data published in these tables may most readily be obtained from subsequent issues of the Bureau's Crop Reports.

Acknowledgment

While the work of co-ordinating and compiling material for the supplement was primarily the responsibility of the Agriculture Division of the Bureau, grateful acknowledgment is made to all agencies who have contributed in any way in the provision of basic data. Official sources of agricultural statistics and contributions of various agencies are given in some detail in the Preface to the 'Handbook of Agricultural Statistics, Part 1 -- Field Crops'
