RECEIPTS FROM THE SALE OF  
PRINCIPAL FARM PRODUCTS  
IN  
MANITOBA, SASKATCHEWAN AND ALBERTA  
BY MONTHS, 1926 to 1936

Ottawa  
January, 1938

51-D-22A  
CS

This project is under the direction of John B. Rutherford. The data for this report were assembled and compiled by A. H. Bogue and J. R. Ricard.

Acknowledgments are due to the Dominion Department of Agriculture, the Manitoba, Saskatchewan and Alberta Departments of Agriculture, the Canadian Cooperative Wool Growers, Ltd., and the Canadian Cooperative Wheat Producers, Ltd. for information which was of assistance in constructing the income series.

RECEIPTS FROM THE SALE OF PRINCIPAL FARM PRODUCTS  
FOR THE PRAIRIE PROVINCES BY MONTHS, 1926 to 1936

This publication contains estimates of monthly receipts from the sale of principal farm products for the provinces of Manitoba, Saskatchewan and Alberta for the years 1926 to 1936. This material has been prepared in response to requests for current information on the economic condition of agriculture. Ultimately, it is planned to make available similar information for these years for all provinces, and to publish monthly estimates of receipts. Because the number of important products was smaller and marketing data for such products more complete, the estimates for the Prairie Provinces were undertaken first.

Products Included

For the Prairie Provinces these monthly estimates of cash income include receipts from the sale of the following 15 products:

Wheat	Flax	Horses	Butterfat
Oats	Hay	Cattle and calves	Fluid Milk
Barley	Potatoes	Sheep and lambs	Wool
Rye		Hogs	Eggs

For the Prairie Provinces it is estimated that the commodities listed above account for 95 per cent of the annual gross cash income from the sale of farm products. Several minor products have been omitted pending the availability of adequate information on which to estimate monthly sales. These include among others, poultry meat, honey, truck crops (of increasing importance in Manitoba) and sugar beets for Alberta. These commodities will be included in a statement of annual gross cash income which is in the course of preparation.

Sources of Data

Monthly sales of the principal grain crops were secured from weekly and annual statements of elevator receipts and platform loadings. No adjustment has been made in these estimates for grain sold and later withdrawn from country elevators. Monthly carloadings were used to estimate sales of hay and potatoes. The estimates of cash receipts from hay largely represent the hay sold off farms in each province for sale in urban centers or in other provinces. The proportion of the potato crop sold each year was determined by the use of Census information on "crops sold or to be sold" and yearly changes in carloadings.

Sales of horses were derived from statements of exports by provincial ports and from numbers going through the St. Boniface Yards at Winnipeg. Farm to farm transfers do not appear in estimates of income from this source. The monthly reports of output of live stock were the basis for estimating sales of hogs, cattle and calves, and sheep and lambs. These estimates were adjusted to include live stock sold for local slaughter. The basis for this adjustment was decided upon by reference to the Census reports of 1926 and 1931.

Monthly sales of butterfat were based upon the production of creamery butter. Fluid milk sales were estimated from dairy reports and unpublished data in the Dominion Bureau of Statistics. Reports of carloadings and information received

from the Canadian Cooperative Wool Growers formed the basis for a determination of monthly wool marketings. Sales of eggs were secured from monthly carloadings and egg inspection records.

In July 1930, the Agricultural Branch of the Dominion Bureau of Statistics began collecting each month the average prices received for important farm products. These prices have been used in making the estimates of monthly receipts from July 1930 to date. For the period prior to July 1930, farm prices were determined by deducting transportation and handling charges from terminal market prices.

These estimates of receipts from the sale of farm products are not statements of gross cash income from agricultural marketings. They do not include all the products sold by farmers. Adjustments have not been made for shipments of live stock into feeding areas, and for grain purchased in one part of a province and sold for feed or seed in another part of the same province. The estimates do not include income received by farmers from other than farm sources. For the years 1926 to 1930, the monthly receipts from grain were not adjusted to account for the operations of the "Pools". To some extent the seasonal distribution of farm receipts was altered by the Pool method of payment and it is intended to revise the series later as more definite information becomes available. There will be some minor changes in these estimates as more adequate data respecting volume of sales and farm prices are secured. These will not, however, greatly affect the estimates as given in this release.

According to the estimates now provided, 1926 marked the high point in cash receipts for Manitoba farmers. Particularly large receipts from sales of crops account for the high income. Cash receipts of Manitoba farmers reached a low point of 31.3 per cent of the 1926 level in 1932, and by 1936 had recovered to almost 50 per cent of the peak year. The percentage of total receipts from live stock and animal products has increased markedly in this province. In 1926, about 25 per cent of the total receipts came from this source, and in 1936, 43 per cent. In part the increased percentage resulted from a greater decline in the prices of crops in the early years of the depression, and in part from a considerable increase in live stock production of late years.

The peak of cash receipts in Saskatchewan occurred in 1928 when they were 10 per cent greater than in 1926. The large crop in 1928 with heavy marketings in the fall months resulted in a greatly increased flow of income. In 1931, receipts fell to less than 24 per cent of the 1926 level. This was due to a combination of small marketings and low prices of grains. For the year 1936, Saskatchewan farmers' income from marketings was 40.7 per cent of 1926.

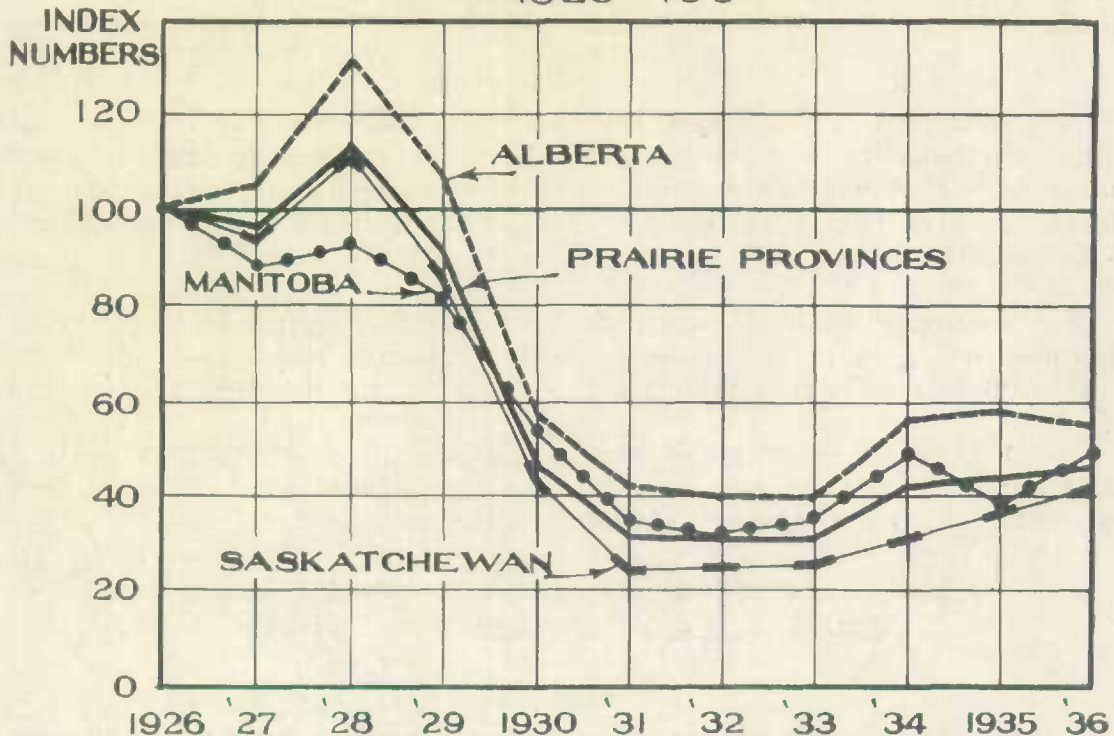

Farmers in Alberta also received their greatest cash income in 1928, at 31 per cent above the 1926 income. In 1933, their low year, they received less than 40 per cent of the amount received in 1926. According to these estimates the income for 1936 had recovered to 55 per cent of that of 1926. The 1935 income was 59 per cent of the base year.

For the Prairie Provinces the peak of cash income occurred in 1928, with the low recorded in 1932. The 1936 cash receipts were 47 per cent of 1926.

#### Seasonal Distribution of Receipts From the Sale of Principal Farm Products

Because of the marked change in conditions which took place after 1930, the seasonal distribution of cash receipts is shown for the years 1926 to 1930 and for

1933	35.1	25.1	39.9	31.1
1934	48.2	31.4	56.4	41.6
1935	38.8	37.0	58.8	43.8
1936	49.9	40.7	55.2	46.6

1931 to 1935. In Manitoba for the period 1926 to 1930, there was a fairly even distribution of receipts for the months of January to August, inclusive. The largest proportion of receipts was recorded in September when nearly 26 per cent of the total year's income was accounted for. October showed almost 16 per cent, and November 12.9 per cent.

From 1931 to 1935 receipts in August accounted for 16.6 per cent of the income. This shift to the earlier month has been in part due to the introduction of earlier maturing varieties, new harvesting methods and generally drier weather conditions. There has also been a tendency to dispose of more of the crops in the early months of the marketing year.

In Saskatchewan the peak of farm receipts occurs in September. Since 1931, there has been a shift in the seasonal distribution and a greater proportion of the receipts fall in the period from March to August than was the case from 1926 to 1930.

A later harvest season throws the peak of receipts in Alberta into the month of October. There is a more even seasonal distribution of receipts from the sale of farm products in Alberta than in either Saskatchewan or Manitoba.
