CENSUS OF MERCHANDISING AND SERVICE ESTABLISHMENTS, 1931.

Ontario - Summary of Retail Facts, Credit and Commodity Sales,

Size of Business, Operating Expenses

This bulletin presents some of the final results of the Census of Merchandising and Service Establishments, covering the retail trade in Ontario during the year 1930. The data that are given in this report show for the first time the size of retail stores, grouped according to annual sales, and the proportion of credit business done in retail stores. The first comprehensive figures of operating expenses are also presented, and an initial effort has been made to analyze the commodity sales of merchandising establishments.

The completeness of the information which can be furnished for the retail trade is determined largely by the extent to which retail store operators keep accurate and detailed records of their activities. While every effort has been made to ensure that the figures which are given in the tables are representative, special note should be taken of the proportion of the total business which is conducted by those firms which were able to furnish the details requested in each case. For example, the extent to which stores have reported their sales by commodities ranges from almost 100 per cent in the case of department stores, to less than 10 per cent in the case of confectionery and delicatessen stores. The information on expenses and credit business is also more complete for some kinds of business than for others.

While this bulletin presents certain of the more significant results of the Census, space could not be found for a great deal more valuable and detailed information on retail trade. The complete results of the census will be contained in the reports which are now being prepared for printing.

(2) Reported salaries of proprietors should only be used as a basis for computing the total compensation of proprietors in any kind of business when the number of reporting establishments is relatively large and the number of proprietors receiving a stated salary forms a substantial proportion of the total number of proprietors. Similar precautions should be taken in computing total expenses for any kind of business.

Soda fountain sales and ice cream	.2		

Note: Sales by commodities were not reported by all stores in each kind of business classification. The commodity coverage indicates the extent to which the sales reported in a given kind of business classification can be broken down by commodities. The commodity coverage shows the degree to which the total sales of the stores included in the commodity breakdown are representative of the sales of all stores in the same kind of business classification. The percentage column shows the proportion which the sales of each commodity forms of the total sales of all stores in the same kind of business classification which reported their sales by commodities. Not all stores of any given classification sell every commodity listed thereunder.
