BUILDING PERMITS

1951 - 1956

INTRODUCTION

This memorandum covering building permits issued by municipalities from 1951 to 1956 inclusive provides information on construction activity in relatively small areas during the period. It is provided as background material similar to data being released monthly starting with January 1957.

The increasing interest in economic factors affecting the growth of small areas, both rural and urban, has resulted in the Bureau receiving many requests for information concerning the value and volume of building permits issued. Usually these requests are for data in specific areas and in the past special compilations had to be prepared to meet each individual request. This procedure is both time consuming and expensive. In addition, because of limited staff, delays were caused in the overall compilation processes. It is felt that by providing the information for all municipalities on a uniform basis, the users of the data will have the information for the areas in which they are interested more quickly and at less cost than has been possible up to now.

One of the principal uses to which the data can be put is in appraising construction activity within municipalities and to a lesser extent, within groups of municipalities over a period of months or years. In cases where it is desirable to make comparisons between two municipalities, and no more suitable information can be found, the data on numbers of residential dwelling units would be more likely to be comparable than that on total value of permits issued for new residential construction. But one would probably want to know also something of the types of houses, such as whether one area was mainly low-cost housing as compared with another area where the houses were principally of the luxury type. Even with the qualifications which must be attached to building permit data, they still provide one of the few measures of current economic activity available for small areas.

The material contained in this publication is compiled from data supplied by the issuing municipalities and therefore, varies from municipality to municipality with the terms of each individual by-law, with the methods of estimating the value of construction for permit-issuing purposes and with the diligence with which the terms of the by-law are applied. Information is not available on the permits allowed to lapse without the work for which the permit was issued being completed.

The data supplied by the municipalities has been given in detail for each municipality reporting over \$100,000 of permits issued in 1955, or in the case of municipalities forming part of a metropolitan area, for all municipalities within the area regardless of the volume of permits issued. The municipalities reporting less than \$100,000 in 1955 have been included in the appropriate regional and provincial totals. Only annual value of building permits issued has been shown for such municipalities. For the convenience of the users of the material Quebec and Ontario have been divided into 10 regions each and Manitoba into 4 regions. In this way, data are available for the individual municipalities, metropolitan areas, regions (Quebec, Ontario and Manitoba only), the provinces and for Canada.

DEFINITIONS

The definitions used in this memorandum are the same as those used by the Dominion Bureau of Statistics in classifying the data contained in Table 27 of the Canadian Statistical Review. These are as follows:

Residential - includes only self-contained housing units and, therefore, excludes such structures as barracks and dormitories.

No. of units shown under Residential housing indicates the number of self-contained dwelling units added. For example, if an apartment building is constructed and contains 6 apartments, it will be shown as 6 dwelling units. When an existing structure is converted into additional housing units, the number of units added is included. The values of the permits issued for such conversions are included with Repair Permits.

Apartments include all multiple housing with 3 or more units; such as triplexes, rows and terraces as well as apartments. Flats, regardless of number - that are part of a non-residential structure - are also included.

Other includes all one and two dwelling structures, such as singles, doubles and duplexes. For the years 1951 to 1955 inclusive, triplexes were included in this group, rather than with apartments.

New Residential Construction includes the value of building permits issued for entirely new residential work including detached and attached garages.

Repair Residential Construction - includes permits issued for major alterations, improvements, conversions and additions as well as smaller types of repair. This definition of repair is at variance with that used in Construction in Canada⁽¹⁾ and Private and Public Investment Outlook⁽²⁾ which classify major alterations, improvements, and additions as new construction; and only those expenditures which return the structure to its previous state, such as painting and pointing of brick work, are considered repair. When this latter category of activity is covered by a building permit, it is included in the total of repair.

(1) Published by the Dominion Bureau of Statistics.

(2) A joint publication of the Economics Branch of the Department of Trade and Commerce and the Dominion Bureau of Statistics.

Non-residential building as indicated by building permits contains industrial, commercial, institutional and government building. Permits are issued for some engineering structures such as broadcasting towers, oil refineries, oil tanks, swimming pools and road construction, but the incidence of these structures, being covered by a building permit has been relatively rare. The figures include both new and repair construction.

Industrial building includes building permits issued for structures that normally are used in the following industries of the Standard Industrial Classification: agriculture, forestry, fishing, mining, manufacturing, construction, transportation, storage, communications and public utilities. Factories are the most common structure.

Commercial building includes building permits issued for structures that fall within the following industries of the Standard Industrial Classification: trade, finance, insurance, real estate and recreation, business and personal service.

Institutional and Government includes expenditures by community, public and government services. Other includes structures that are not classified elsewhere.

COVERAGE

The coverage in terms of total population presently accounted for by the survey varies from province to province. In total the number of persons residing within the areas covered amounted to 57 per cent in 1951 and 62 per cent in 1956.

Total and Urban Population Covered

The urban areas included in the building permits survey contains 87 per cent of the urban population in Canada in 1951, as indicated in the first of the following tables. Coverage of over 90 per cent in Prince Edward Island, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia, indicates a wider use of building permit by-laws in these provinces than in the rest of Canada.

The lower per centage of total population covered, as shown in the second of the following tables, is largely a result of the rural-urban ratio of population in the provinces. In British Columbia and Ontario where both the urban coverage and size of the urban population is large, the percentage of total population covered is large. Although the urban population coverage in Saskatchewan was slightly over 95 per cent in 1951, only 30 per cent of the total population is classified as urban and, thus, the total population coverage is low. Similarly, in Nova Scotia, where the coverage of urban population is lower than in most of the other provinces and where the urban-rural ratio is about 50 per cent, the per centage of total population covered by the survey is even lower.

POPULATION OF URBAN(1) AREAS ISSUING BUILDING PERMITS

1951

Area	1951		
	Urban Population	Urban Population Covered by Survey	
		No.	%
Canada	8,628,253	7,502,060	87.0
Newfoundland	154,795	80,684	52.1
Prince Edward Island	24,685	22,434	90.9
Nova Scotia	344,831	284,636	82.5
New Brunswick	215,011	160,465	74.6
Quebec	2,697,318	2,081,233	77.2
Ontario	3,251,099	2,944,597	90.6
Manitoba	439,580	419,125	95.4
Saskatchewan	252,470	240,013	95.1
Alberta	449,675	406,690	90.4
British Columbia	793,471	762,183	96.1

(1) Includes all persons residing in cities, towns, and villages of 1,000 and over, whether incorporated or unincorporated, as well as the population of all parts of census metropolitan areas.

Population data on this basis is not available for 1956.

British Columbia	1,165,210	868,212	74.5	1,398,464	1,083,640	77.5

Metropolitan Population Covered

As in the case of urban population, the percentage of population in metropolitan areas covered by the survey is high. However, in some of the areas population coverage declined from 1951 to 1956. This is due to a higher rate of population growth in the suburban communities, not included in the survey, than in the city proper. For instance, in 1956 the population of Saint John increased by only 1.9 per cent over the 1951 figure, whereas the population of those sections of the metropolitan area, not covered by the survey, increased by approximately 21 per cent during the same period.

FOOTNOTES

* Not in Survey.

** Not available.

*** Partial coverage, full year figures not available.

**** No longer issuing permits.

(1) Complete details of Building Permits issued by these municipalities are not given since their total value of permits issued during 1955 was less than \$100,000 in each case.

(2) The municipalities in Quebec, Ontario and Manitoba are included in Economic areas as indicated.
