

MOSQUITO-BORNE DISEASE SURVEILLANCE REPORT

JULY 21 to 27, 2019 (WEEK 30)

Year-to-Date Snapshot

West Nile

Human Epidemiology

As of surveillance week 30, ending on July 27, 2019, no human cases of West Nile virus (WNV) have been reported to the Public Health Agency of Canada (PHAC).

Mosquito, Wild Bird & Equine Epidemiology

As of week 30, PHAC has been notified of 2311 mosquito pools tested for WNV. Of these, three positive mosquito pools were identified: two in Ontario and one in Manitoba (**Table 1**).

Five of nineteen dead wild birds have been tested positive for WNV, by the [Canadian Wildlife Health Cooperative \(CWHC\)](#): four in Ontario and one in Quebec (**Table 2**).

Since the start of this season, the [Canadian Food Inspection Agency \(CFIA\)](#) has not reported any domestic animals that tested positive for WNV (**Table 2**).

Figure 1. (A) WNV human clinical cases and asymptomatic infections, (B) positive WNV birds, and (C) percent positive mosquito pools by episode or report week, in Canada, 2019

¹Human cases includes clinical cases and asymptomatic infection. ²Episode week is based on symptom onset or best available date including: diagnosis, lab sample or date reported. ³Episode week is based off date of death or best available date including: date found, submitted, or received.

Table 1. Year-to-Date WNV positive pools and percent positive by province and nationally (January 1- July 27, 2019)

Province ¹	Positive Pools	Total Pools Tested	Percent Positive
Saskatchewan	0	35	0.00 %
Manitoba	1	483	0.21 %
Ontario	2	1082	0.18 %
Québec	0	711	0.00 %
Total	3	2311	0.13 %

¹ Mosquito surveillance data is reported by the following four provinces: Saskatchewan, Manitoba Ontario and Quebec.

Table 2. Number of WNV positive animal cases for current week and Year-to-Date (YTD) (January 1- July 27, 2019)

Province	Wild Birds ¹		Equine	
	Week 30	YTD Total	Week 30	YTD Total
British Columbia	0	0	0	0
Alberta	0	0	0	0
Saskatchewan	0	0	0	0
Manitoba	0	0	0	0
Ontario	1	4	0	0
Québec	1	1	0	0
Maritime Provinces	0	0	0	0
Territories	0	0	0	0
Total	2	5	0	0

¹ Not all provinces conduct dead wild bird surveillance as part of their respective WNV surveillance program. However, WNV positive dead wild birds may be identified through the National Wildlife Disease Surveillance Program, CWHC or by specific provinces.

California Serogroup

As of July 27, 2019, no human exposures or cases of California serogroup virus have been reported by the [National Microbiology Laboratory](#).

Eastern Equine Encephalitis

No human cases of EEEV have been reported to PHAC since the beginning of the 2019 transmission season.

The CFIA has not reported any horses testing positive for Eastern Equine Encephalitis virus (EEEV) in Canada.

Provincial/Territorial & International Surveillance Links

Data reported to PHAC is subject to change and may differ from provincial webpages due to reporting timelines. To obtain the latest arbovirus surveillance data, please refer to the following jurisdictional/regional webpages:

Provincial

[Alberta - West Nile virus](#)

[Saskatchewan - West Nile virus](#)

[Manitoba - West Nile virus](#)

[Ontario - West Nile virus](#)

[Québec - Virus du Nil occidental](#)

International

[U.S. Centers for Disease Control - West Nile virus](#)

[European Centre Disease Control - Mosquito-borne disease](#)

Thank you to all our partners for participating in the National WNV/MBD surveillance program.
