

HEP YES, Hepatitis C can be Treated and Cured

Hepatitis C is a liver disease caused by the hepatitis C virus.

FACTS ABOUT HEPATITIS C

44%

of those living with hepatitis C are unaware of their infection

67%

of Canadians reported never being tested for hepatitis C*

44%

of Canadians reported that their most recent test was > 5 years ago*

You could have hepatitis C and not have any signs or symptoms

PROTECT YOURSELF. KNOW YOUR RISK.

You may be at risk if you:

Shared drug-use equipment, even once

Shared personal care items (e.g. razor or toothbrush)

Were exposed to blood during sexual activity

Had a tattoo or piercing done where non-sterile equipment is used

Lived in a region where hepatitis C is common

Received a blood transfusion or blood products before 1992

THERE IS NO VACCINE FOR HEPATITIS C

BUT, did you know?

Hepatitis C can be treated with medication that has cure rates >90%

Earlier diagnosis and treatment lead to better health outcomes

Early treatment may even prevent liver disease, liver cancer, or cirrhosis

Testing is quick and simple with a blood test
ASK your HEALTHCARE PROVIDER for a test, if you think you could have hepatitis C

The best way to know is to get tested

To learn more about how to protect yourself and where you can get tested:

Visit Canada.ca and search hepatitis C
