## Index

## Preface

The National Plumbing Code of Canada 2015, together with the National Building Code of Canada 2015, the National Energy Code of Canada for Buildings 2017 and the National Fire Code of Canada 2015, is an objective-based National Model Code that can be adopted by provincial and territorial governments. Codes Canada ${ }^{(1)}$ are developed by the Canadian Commission on Building and Fire Codes (CCBFC).

In Canada, provincial and territorial governments have the authority to enact legislation that regulates the design and installation of plumbing systems within their jurisdictions. This legislation may include the adoption of the National Plumbing Code (NPC) without change or with modifications to suit local needs, and the enactment of other laws and regulations regarding plumbing system design and installation, including the requirements for professional involvement.

The NPC is a model code in the sense that it helps promote consistency among provincial and territorial plumbing codes. Persons involved in the design or installation of plumbing systems should consult the provincial or territorial government concerned to find out which plumbing code is applicable.

This edition of the NPC succeeds the 2010 edition.

## Code Development

## Development of Codes Canada

The Canadian Commission on Building and Fire Codes (CCBFC) is responsible for the content of the National Model Codes. The CCBFC is an independent body made up of volunteers from across the country and from all facets of the code-user community. Members of the CCBFC and its standing committees include builders, engineers, skilled trade workers, architects, building owners, building operators, fire and building officials, manufacturers and representatives of general interests.

The CCBFC is advised on scope, policy and technical issues pertaining to the Codes by the Provincial/Territorial Policy Advisory Committee on Codes (PTPACC), which is a committee of senior representatives from provincial/territorial ministries responsible for the regulation of buildings, fire safety and plumbing in their jurisdictions. The PTPACC was created by the provinces and territories, with provision of guidance to the CCBFC as one of its main functions. Through the PTPACC and its subcommittees on building, fire and plumbing regulation, the provinces and territories are engaged in every phase of the model Code development process.

Codes Canada (formerly named the Canadian Codes Centre) of the National Research Council (NRC) provides technical and administrative support to the CCBFC and its standing committees. NRC publishes Codes Canada and periodic revisions to the Codes to address pressing issues.

The broader code-user community also makes a significant contribution to the model Code development process by submitting requests for changes or additions to the Codes

[^0]and by commenting on the proposed changes during the public reviews that precede each new edition.

The CCBFC takes into consideration the advice received from the provinces and territories as well as code users' comments at each stage of Code development. The scope and content of Codes Canada are determined on a consensus basis, which involves the review of technical, policy and practical concerns and debate on the implications of these concerns.

More information on the Code development process is available on NRC's Web site. Printed copies of this information may also be requested from the Secretary of the CCBFC, whose address is provided at the end of this Preface.

## National Plumbing Code of Canada 2015

The National Plumbing Code (NPC) sets out technical provisions for the design and installation of new plumbing systems. It also applies to the extension, alteration, renewal and repair of existing plumbing systems.

The NPC establishes requirements to address the following four objectives, which are fully described in Division A of the Code:

- safety
- health
- protection of buildings and facilities from water and sewage damage
- environment

Code provisions do not necessarily address all the characteristics of buildings and facilities that might be considered to have a bearing on the Code's objectives. Through the extensive consensus process used to develop and maintain Codes Canada (see the section entitled Development of Codes Canada), the code-user community has decided which characteristics should be regulated through the NPC.

Because the NPC is a model code, its requirements can be considered as the minimum acceptable measures required to adequately achieve the above-listed objectives, as recommended by the Canadian Commission on Building and Fire Codes. They become minimum acceptable requirements once they are adopted and passed into law or regulation by an authority having jurisdiction: i.e., the requirements represent the minimum level of performance required to achieve the objectives that is acceptable to the adopting authority.

Plumbing code users are also involved in the development of the NPC and they help determine the content. The Code development process is described in the section entitled Development of Codes Canada.

The NPC is a model code which, when adopted or adapted by a province or territory, becomes a regulation. It is not a textbook on plumbing system design or installation. The design of a technically sound plumbing system depends upon many factors beyond simple compliance with plumbing regulations. Such factors include the availability of knowledgeable practitioners who have received appropriate education, training and experience and who have some degree of familiarity with the principles of good plumbing practice and experience using textbooks, reference manuals and technical guides.

The NPC does not list acceptable proprietary plumbing products. It establishes the criteria that plumbing materials, products and assemblies must meet. Some of these criteria are explicitly stated in the NPC while others are incorporated by reference to material or product standards published by standards development organizations. Only those portions of the standards related to the objectives of this Code are mandatory parts of the NPC.

## Code Requirements

Every NPC requirement must address at least one of the Code's four stated objectives, namely:

- safety
- health
- protection of buildings and facilities from water and sewage damage
- environment

In dealing with proposed changes or additions to any Codes Canada, the CCBFC considers many issues such as the following:

- Does the proposed requirement provide the minimum level of performance-and no more than the minimum - needed to achieve the Code's objectives?
- Will persons responsible for Code compliance be able to act on or implement the requirement using commonly accepted practices?
- Will enforcement agencies be able to enforce the requirement?
- Are the costs of implementing the requirement justifiable?
- Have the potential policy implications of the requirement been identified and addressed?
- Is there broad consensus on this requirement among Code users representing all facets of the plumbing system design and construction industries, as well as among provincial and territorial governments?

Guidelines for requesting changes to the NPC are available on NRC's Web site. Printed copies of the guidelines may also be requested from the Secretary of the CCBFC, whose address is provided at the end of this Preface.

## Objective-Based Code Format

The National Plumbing Code (NPC) was published in an objective-based code format for the first time in 2005. This was the result of ten years of work on an initiative that arose out of the strategic plan adopted by the Canadian Commission on Building and Fire Codes (CCBFC) in 1995.

The NPC comprises three Divisions:

- Division A, which defines the scope of the Code and contains the objectives, the functional statements and the conditions necessary to achieve compliance;
- Division B, which contains acceptable solutions (commonly referred to as "technical requirements") deemed to satisfy the objectives and functional statements listed in Division A; and
- Division C, which contains administrative provisions.

A more complete description of this division-based structure is included in the section entitled Structure of Objective-Based Codes.

Each requirement in Division B is linked to three types of information:

- objectives (such as safety or health), which individual requirements help to address,
- functional statements (statements on the functions of the plumbing system that a particular requirement helps to achieve), and
- intent statements (detailed statements of the specific intent of the provision).

## Objectives

The NPC's objectives are fully defined in Section 2.2. of Division A. Most of the top-level objectives have two levels of sub-objectives.

The objectives describe, in very broad terms, the overall goals that the NPC's requirements are intended to achieve. They serve to define the boundaries of the subject areas the Code addresses. However, the Code does not deal with all the issues that might be considered to fall within those boundaries.

The objectives describe undesirable situations and their consequences, which the Code aims to avoid occurring in plumbing systems. The wording of most of the definitions of the objectives includes two key phrases: "limit the probability" and "unacceptable risk." The phrase "limit the probability" is used to acknowledge that the NPC cannot entirely prevent those undesirable situations from happening. The phrase "unacceptable risk"
acknowledges that the NPC cannot eliminate all risk: the "acceptable risk" is the risk remaining once compliance with the Code has been achieved.

The objectives are entirely qualitative and are not intended to be used on their own in the design and approval processes.

The objectives attributed to the requirements or portions of requirements in Division B are listed in a table in Section 2.8. of Division B.

## Functional Statements

The NPC's functional statements are defined in Section 3.2. of Division A.
The functional statements are more detailed than the objectives: they describe conditions in the plumbing system that help satisfy the objectives. The functional statements and the objectives are interconnected: there may be several functional statements related to any one objective and a given functional statement may describe a function of the plumbing system that serves to achieve more than one objective.

Like objectives, functional statements are entirely qualitative and are not intended to be used on their own in the design and approval processes.

The functional statements attributed to the requirements or portions of requirements in Division B are listed in a table in Section 2.8. of Division B.

## Intent Statements

Intent statements explain, in plain language, the basic thinking behind each Code provision contained in Division B. Intent statements, each of which is unique to the provision with which it is associated, explain how requirements help to achieve their attributed objectives and functional statements. Like the objectives, the intent statements are expressed in terms of risk avoidance and expected performance. They offer insight into the views of the responsible standing committees on what the Code provisions are intended to achieve.

The intent statements serve explanatory purposes only and do not form an integral part of the Code provisions: as such, they are similar in function to the explanatory notes at the end of Part 2. Due to the sheer volume of intent statements - hundreds for the NPC alone - they are only available as part of an online Code subscription and as a separate electronic document entitled "Supplement to the NPC 2015: Intent Statements," which is posted on NRC's Web site.

All this additional information-objectives, functional statements and intent statements-is intended to facilitate the implementation of the Code in two ways:

- Clarity of intent: The objectives, functional statements and intent statements linked to a Code requirement clarify the reasoning behind that requirement and facilitate understanding of what must be done to satisfy that requirement. This added information may also help avoid disputes between practitioners and officials over these types of issues.
- Flexibility: The additional information allows for flexibility in Code compliance. A person seeking to propose a new method or material not described or covered in the Code will be able to use the added information to understand the expected level of performance that their alternative solution must achieve to satisfy the Code.

## Structure of Objective-Based Codes

The National Plumbing Code (NPC) is organized into three Divisions.

## Division A: Compliance, Objectives and Functional Statements

Division A defines the scope of the NPC and presents the objectives that the Code addresses and the functions the plumbing system must perform to help to satisfy those objectives.

Division A cannot be used on its own as a basis for designing and installing a plumbing system or for evaluating a plumbing system's compliance with the Code.

## Division B: Acceptable Solutions

The term "acceptable solutions" refers to the technical provisions contained in the Code. It reflects the principle that plumbing codes establish an acceptable level of risk or performance and underlines the fact that a code cannot describe all possible valid design and installation options. The term provokes the question "To whom are these solutions considered acceptable?" Acceptable solutions represent the minimum level of performance that will satisfy the NPC's objectives and that is acceptable to an authority that adopts the NPC into law or regulation.

The requirements in Division B - the acceptable solutions - are linked to at least one objective and functional statement found in Division A. These linkages play an important role in allowing objective-based codes to accommodate innovation.

It is expected that the majority of Code users will primarily follow the acceptable solutions presented in Division B and that they will consult Division A only when seeking clarification on the application of Division B's requirements to a particular situation, when considering an alternative solution, or to read the definition of selected terms in the context of the NPC.

## Division C: Administrative Provisions

Division C contains administrative provisions relating to the application of the Code. Many provinces and territories establish their own administrative provisions upon adopting or adapting the NPC; having all the administrative provisions in one Division facilitates their customization to suit jurisdictional needs.

## Relationship between Division A and Division B

Sentence 1.2.1.1.(1) of Division A is a very important sentence: it is a precise statement of the relationship between Divisions A and B and is central to the concept of objective-based codes.

1) Compliance with this Code shall be achieved by
a) complying with the applicable acceptable solutions in Division B (see Note A-1.2.1.1.(1)(a)), or
b) using alternative solutions that will achieve at least the minimum level of performance required by Division B in the areas defined by the objectives and functional statements attributed to the applicable acceptable solutions (see Note A-1.2.1.1.(1)(b)).

Clause (a) makes it clear that the acceptable solutions in Division B are automatically deemed to satisfy the linked objectives and functional statements of Division A.

Clause (b) makes it clear that alternative solutions can be used in lieu of compliance with the acceptable solutions. However, to do something different from the acceptable solutions described in Division B, a proponent must show that their proposed alternative solution will perform at least as well as the acceptable solution(s) it is replacing. The objectives and functional statements attributed to the acceptable solution(s) identify the areas of performance where this equivalence must be demonstrated.

## Additional Information

## Numbering System

A consistent numbering system has been used throughout Codes Canada. The first number indicates the Part of the Code; the second, the Section in the Part; the third, the Subsection; and the fourth, the Article in the Subsection. The detailed provisions are found at the Sentence level (indicated by numbers in brackets), and Sentences may be broken down into Clauses and Subclauses. This structure is illustrated as follows:

| 3 | Part |
| :--- | :--- |
| 3.5. | Section |
| 3.5 .2. | Subsection |
| 3.5 .2 .1. | Article |
| 3.5.2.1.(2) | Sentence |
| 3.5.2.1.(2)(a) | Clause |
| 3.5.2.1.(2)(a)(i) | Subclause |

## Change Indication

Where a technical change or addition has been made relative to the 2010 edition, a vertical line has been added in the margin next to the affected provision to indicate the approximate location of new or modified content. No change indication is provided for renumbered or deleted content.

## Meaning of the words "and" and "or" between the Clauses and Subclauses of a Sentence

Multiple Clauses and Subclauses are connected by the word "and" or "or" at the end of the second last Clause or Subclause in the series. Although this connecting word appears only once, it is meant to apply to all the preceding Clauses or Subclauses within that series.

For example, in a series of five Clauses-a) to (e) - in a Code Sentence, the appearance of the word "and" at the end of Clause d) means that all Clauses in the Sentence are connected to each other with the word "and." Similarly, in a series of five Clauses-a) to e) - in a Code Sentence, the appearance of the word "or" at the end of Clause d) means that all Clauses in the Sentence are connected to each other with the word "or."

In all cases, it is important to note that a Clause (and its Subclauses, if any) must always be read in conjunction with its introductory text appearing at the beginning of the Sentence.

## Administration

A separate CCBFC document entitled Administrative Requirements for Use with the National Building Code of Canada 1985 is also published by the National Research Council. It is automatically adopted as per Article 2.2.1.1. of Division C if the adopting authority does not provide other administrative requirements.

## Metric Conversion

All values in the NPC, other than nominal sizes, are given in metric units. A conversion table of imperial equivalents for the most common units used in plumbing system design and installation is located at the end of the Code.

## Commercial Rights to Reproduce the National Plumbing Code

Copyright for the National Plumbing Code is owned by the National Research Council of Canada (NRC). All rights are reserved. Reproduction by any means of NRC's copyright material is prohibited without the written consent of NRC. Request for permission to reproduce the National Plumbing Code must be sent to:

# Relationship of the NPC to Standards Development and Conformity Assessment 

#### Abstract

The development of many provisions in the National Plumbing Code (NPC) and the assessment of conformity to those provisions are supported by several of the member organizations of Canada's National Standards System (NSS).

The NSS is a federation of accredited organizations concerned with standards development, certification, testing, inspection, personnel and management systems registration that is established under the auspices of the Standards Council of Canada Act. Activities of the NSS are coordinated by the Standards Council of Canada (SCC), which has accredited 8 standards development organizations, 36 certification organizations, 21 registration organizations, and 344 calibration and testing laboratories.

The SCC is a federal non-profit Crown corporation responsible for the coordination of voluntary standardization in Canada. It also has responsibilities for Canada's activities in voluntary international standardization.

## Canadian Standards

The NPC contains many references to standards published by accredited standards development organizations in Canada. As part of the accreditation requirements, these organizations adhere to the principles of consensus. This generally means substantial majority agreement of a committee comprising a balance of producer, user and general interest members, and the consideration of all negative comments. The organizations also have formal procedures for the second-level review of the technical preparation and balloting of standards prepared under their auspices. (The Canadian Commission on Building and Fire Codes (CCBFC) follows these same principles of consensus in the operation of its Code development process.)

The following organizations are accredited as standards development organizations in Canada:

- American Society for Testing and Materials International (ASTM)
- Bureau de normalisation du Québec (BNQ)
- Canadian General Standards Board (CGSB)
- Canadian Standards Association (CSA)
- ULC Standards (ULC)
- Underwriters' Laboratories (UL)

Table 1.3.1.2. of Division B lists the standards referenced in the NPC. Standards proposed to be referenced in the NPC are reviewed to ensure their content is compatible with the Code. Thereafter, referenced standards are reviewed as needed during each Code cycle. Standards development organizations are asked to provide information on any changes in the status of their standards referenced in the NPC - withdrawals, amendments, new editions, etc. This information is passed on to the CCBFC, its standing committees, the provinces and territories, and interested stakeholders on particular issues, all of whom are given the opportunity to identify any problems associated with the changes. These bodies do not necessarily review in detail the revised standards; rather, the approach relies on the consensus process involved in the maintenance of the standards and on the extensive knowledge and backgrounds of committee members, provincial or territorial staff, NRC staff, and consulted stakeholders to identify changes in the standards that might create problems in the Code.

## Non-Canadian Standards

A number of subject areas for which the Canadian standards development organizations have not developed standards are covered in the NPC. In these cases, the Code often references standards developed by organizations in other countries, such as the American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE) and the National Fire Protection Association (NFPA). These standards are developed using processes that may differ from those used by the Canadian standards development organizations; nevertheless, these standards have been reviewed by the relevant standing committees and found to be acceptable.

## Conformity Assessment

The NPC establishes minimum measures, either within its own text or that of referenced standards. However, the NPC does not deal with the question of who is responsible for assessing conformity to the measures or how those with this responsibility might carry it out. This responsibility is usually established by the governing legislation of the adopting provinces or territories. Provincial or territorial authorities should be consulted to determine who is responsible for conformity assessment within their jurisdiction.

Those persons responsible for ensuring that a material, appliance, system or equipment meets the performance requirements of this Code have several means available to assist them. These means vary from on-site inspection to the use of certification services provided by accredited third-party organizations. Test reports or mill certificates provided by manufacturers or suppliers can also assist in the acceptance of products. Engineering reports may be required for more complex products.

## Testing

The accreditation programs of the SCC include many organizations accredited for testing and calibration that are capable of reliably testing building products to specified standards. The test results produced by these organizations can be used in the evaluation, qualification and certification of building products to Code provisions. The SCC's Web site (www.scc.ca) lists accredited certification bodies and allows users to search the scope of accreditation for each of these organizations.

## Certification

Certification is the confirmation by an independent organization that a product or service meets a requirement. Certification of a product, process, or system entails physical examination, testing as specified in the appropriate standards, plant examination, and follow-up unannounced plant inspections. This procedure leads to the issuing of a formal assurance or declaration, by means of a certification mark or certificate, that the product, process or system is in full conformity with specified provisions.

In some cases, a product for which no standard exists can be certified using procedures and criteria developed by the accredited certifying organization and specifically designed to measure the performance of that product. Certification bodies publish lists of certified products and companies.

## Registration

Quality Registration Organizations assess a company's conformance to quality assurance standards like the International Organization for Standardization ISO 9000.

## Evaluation

An evaluation is a written opinion by an independent professional organization that a product will perform its intended function in a building. An evaluation is very often done to determine the ability of an innovative product, for which no standards exist, to satisfy
the intent of a Code requirement. Follow-up plant inspections are not normally part of the evaluation process. Several organizations, including the Canadian Construction Materials Centre (CCMC), offer such evaluation services.

## Qualification

The qualification of building products also evaluates the ability of a product to perform its intended function by verifying that it meets the requirements of a standard. Qualification normally includes some follow-up plant inspection. Some organizations publish lists of qualified products that meet the specified requirements. Some organizations qualify manufacturing and/or testing facilities for building products for compliance with the Code and relevant standards.

## Revisions and Errata

## Issued by the Canadian Commission on Building and Fire Codes

The Change Summary table that follows describes revisions, errata and editorial updates that apply to the National Plumbing Code of Canada 2015:

- Revisions are changes deemed urgent that were posted for public review from November 6, 2017 to January 2, 2018 and have been approved by the Canadian Commission on Building and Fire Codes.
- Errata are corrections to existing text.
- Editorial updates are provided for information purposes only.

Code pages containing revisions and/or errata are identified with the words "Amended Page" in the footer; pages with editorial updates and index pages with changes are not flagged.

Code users should contact their local authority having jurisdiction to find out if these revisions and errata apply in their province or territory.

Change Summary - National Plumbing Code of Canada 2015

| Division | Code Reference | Change | $\begin{gathered} \text { Date } \\ (\mathrm{Y}-\mathrm{M}-\mathrm{D}) \end{gathered}$ | Description of Change |
| :---: | :---: | :---: | :---: | :---: |
| A | $\begin{gathered} \text { Figure } \\ \text { A-1.4.1.2.(1)-F } \end{gathered}$ | erratum | 2018-09-28 | Figure was corrected to show the storm and sanitary building drains sloping down to street level |
|  | $\begin{gathered} \text { Figure } \\ \text { A-1.4.1.2.(1)-G } \end{gathered}$ | erratum | 2018-09-28 | Figure was corrected to show the storm and sanitary building drains sloping down to street level |
| B | 1.3.1.1.(1) | revision | 2018-09-28 | Date stated in Sentence was revised to read "30 June 2017" |
|  | Table 1.3.1.2. | revision | 2018-09-28 | Document references were updated as applicable to reflect more recent editions published as of June 30, 2017 |
|  | 2.2.5. | revision | 2018-09-28 | Article 2.2.5.1. was deleted |
|  | 2.2.6. | revision | 2018-09-28 | Article 2.2.6.3. was deleted |
|  | Table 2.3.4.5. | revision | 2018-09-28 | Entries for "Asbestos-cement pipe" and "Asbestos-cement pipe that is $\leq 300 \mathrm{~mm}$ long between adjacent fittings" were deleted, and Table Note (1) was deleted |
|  | 2.3.5. | revision | 2018-09-28 | Article 2.3.5.1. was revised, and Article 2.3.5.2. was deleted |
|  | 2.5.6.5.(4) | erratum | 2018-09-28 | Clauses (a) and (b) were corrected to read "... and not less than 3.5 m in any other direction ..." |
|  | 2.5.7.2.(2) | erratum | 2018-09-28 | The term "Building drains" was corrected to read "Sanitary building drains" |
|  | 2.5.8.4 | erratum | 2018-09-28 | Sentence (5) was deleted to correct the duplication of Sentence 2.5.7.2.(2) |
|  | 2.6.1.11.(1) | erratum | 2018-09-28 | Sentence was restructured, revised to clarify the intent, and corrected to read "backflow preventers required by Sentence 2.6.2.1.(3), ..." |
|  | Table 2.8.1.1. | errata <br> (unless otherwise indicated) | 2018-09-28 | Table was corrected as follows: |
|  |  |  |  | Article 2.2.2.4.: entry was corrected to read "2.2.2.3." |
|  |  |  |  | Article 2.2.2.5.: entry was corrected to read "2.2.2.4." |
|  |  |  |  | Article 2.2.2.6.: entry was corrected to read "2.2.2.5." |

Change Summary - National Plumbing Code of Canada 2015 (Continued)

| Division | Code Reference | Change | $\begin{gathered} \text { Date } \\ (Y-M-D) \end{gathered}$ | Description of Change |
| :---: | :---: | :---: | :---: | :---: |
| B (continued) | Table 2.8.1.1. (continued) | revision | 2018-09-28 | Sentence 2.2.3.2.(3): "[F81-OP5]" was added |
|  |  |  |  |  |
|  |  |  |  | Article 2.2.5.1.: entry was deleted |
|  |  |  |  | Sentence 2.2.5.9.(1): "[F20,F80,F81-OH2.1,OH2.3]" was corrected to read "[F20,F80,F81-OH2.1]", and "[F20,F80-OP5]" was corrected to read "[F20,F80,F81-OP5]" |
|  |  |  |  | Sentence 2.2.6.2.(1): "[F40,F81-OH1.1]" was corrected to read "[F81-OH1.1]", "[F20,F30-OS2.1]" was deleted, and "[F20,F30-OS3.1]" was corrected to read "[F20-OS3.1]" |
|  |  | revision |  | Article 2.2.6.3.: entry was deleted |
|  |  |  |  | Articles 2.2.6.11. to 2.2.6.13., Sentences (1) and (2): "[F71,F80-OH2.1,OH2.3]" was corrected to read "[F80-OH2.1]", "[F46-OH2.2]" was corrected to read "[F46,F80-OH2.2]", and the term "water systems" was italicized |
|  |  |  |  | Sentences 2.2.6.14.(1) and (2): "[F80-OH2.1] Applies to drainage systems and venting systems. [F46,F80-OH2.2] Applies to water systems." was added |
|  |  |  |  | Sentences 2.2.6.15.(1) and (2): "[F80-OP5]" was added |
|  |  |  |  | Sentence 2.2.10.17.(1): "[F46,F70-OH2.2]" was corrected to read "[F46-OH2.2]" |

1.5.1 $\quad$ Referenced Documents ..... 1-9
1.5.2. Organizations ..... 1-9
Notes to Part 1 ..... $1-11$

## Section 1.1. General

### 1.1.1. Application of this Code

### 1.1.1.1. Application of this Code

1) This Code applies to the design, installation, extension, alteration, renewal or repair of plumbing systems.
2) This Code specifies the minimum requirements for
a) drainage systems for water-borne wastes and storm water for buildings to the point of connection with public services,
b) venting systems,
c) water service pipes, and
d) water distribution systems.
3) Plumbing facilities in buildings shall be provided in accordance with Part 7 of Division B of the National Building Code of Canada 2015.

## Section 1.2. Compliance

### 1.2.1. Compliance with this Code

1.2.1.1. Compliance with this Code

1) Compliance with this Code shall be achieved by
a) complying with the applicable acceptable solutions in Division B (see Note A-1.2.1.1.(1)(a)), or
b) using alternative solutions that will achieve at least the minimum level of performance required by Division B in the areas defined by the objectives and functional statements attributed to the applicable acceptable solutions (see Note A-1.2.1.1.(1)(b)).
2) For the purposes of compliance with this Code as required in Clause 1.2.1.1.(1)(b), the objectives and functional statements attributed to the acceptable solutions in Division B shall be the objectives and functional statements referred to in Subsection 1.1.2. of Division B.

### 1.2.2. Materials, Systems and Equipment

### 1.2.2.1. Characteristics of Materials, Systems and Equipment

1) All materials, systems and equipment installed to meet the requirements of this Code shall be free of defects and possess the necessary characteristics to perform their intended functions when installed.

### 1.2.2.2. Used Materials and Equipment

1) Used materials and equipment, including fixtures, shall not be reused unless they meet the requirements of this Code for new materials and equipment and are otherwise satisfactory for their intended use.

## Section 1.3. Divisions A, B and C of this Code

### 1.3.1. General

### 1.3.1.1. Scope of Division $A$

1) Division A contains the compliance and application provisions, objectives and functional statements of this Code.

### 1.3.1.2. Scope of Division B

1) Division B contains the acceptable solutions of this Code.
1.3.1.3. Scope of Division C
2) Division $C$ contains the administrative provisions of this Code.
1.3.1.4. Internal Cross-references
3) Where the Division of a referenced provision is not specified in this Code, it shall mean that the referenced provision is in the same Division as the referencing provision.

### 1.3.2. Application of Division A

### 1.3.2.1. Application of Parts 1, 2 and 3

1) Parts 1,2 and 3 of Division A apply to all plumbing systems covered in this Code. (See Article 1.1.1.1.)

### 1.3.3. Application of Division B

1.3.3.1. Application of Parts 1 and 2

1) Parts 1 and 2 of Division B apply to all plumbing systems covered in this Code. (See Article 1.1.1.1.)

### 1.3.4. Application of Division C

### 1.3.4.1. Application of Parts 1 and 2

1) Parts 1 and 2 of Division $C$ apply to all plumbing systems covered in this Code. (See Article 1.1.1.1.)

## Section 1.4. Terms and Abbreviations

### 1.4.1. Definitions of Words and Phrases

### 1.4.1.1. Non-defined Terms

1) Words and phrases used in this Code that are not included in the list of definitions in Article 1.4.1.2. shall have the meanings that are commonly assigned to them in the context in which they are used, taking into account the specialized use of terms by the various trades and professions to which the terminology applies.
2) Where objectives and functional statements are referred to in this Code, they shall be the objectives and functional statements described in Parts 2 and 3.
3) Where acceptable solutions are referred to in this Code, they shall be the provisions stated in Part 2 of Division B.
4) Where alternative solutions are referred to in this Code, they shall be the alternative solutions mentioned in Clause 1.2.1.1.(1)(b).

### 1.4.1.2. Defined Terms

1) The words and terms in italics in this Code shall have the following meanings (an asterisk (*) following a defined word or term indicates that the definition for that word or term is taken from the NBC):
Additional circuit vent means a vent pipe that is installed between a circuit vent and a relief vent to provide additional air circulation.
Air admittance valve means a one-way valve designed to allow air to enter the drainage system when the pressure in the plumbing system is less than the atmospheric pressure. (See Note A-2.2.10.16.(1) of Division B.)
Air break means the unobstructed vertical distance between the lowest point of an indirectly connected soil-or-waste pipe and the flood level rim of the fixture into which it discharges. (See Note A-2.3.3.11.(2) of Division B.)
Air gap means the unobstructed vertical distance through air between the lowest point of a water supply outlet and the flood level rim of the fixture or device into which the outlet discharges. (See Note A-2.6.2.9.(2) of Division B.)
Alloyed zinc means an alloy of zinc having the corrosion resistance and physical properties of an alloy containing $0.15 \%$ titanium, $0.74 \%$ copper and $99.11 \%$ zinc, and so tempered as to be capable of being formed into the shape required for a watertight joint.
Auxiliary water supply means any water supply on or available to the premises other than the primary potable water supply. (See Note A-1.4.1.2.(1).)
Backflow means a flowing back or reversal of the normal direction of the flow.
Backflow preventer means a device or a method that prevents backflow. (See Figure A-1.4.1.2.(1)-A in Note A-1.4.1.2.(1).)
Back pressure means pressure higher than the supply pressure.
Back-siphonage means backflow caused by a negative pressure in the supply system. (See Figure A-1.4.1.2.(1)-B in Note A-1.4.1.2.(1).)
Back-siphonage preventer (or vacuum breaker) means a device or a method that prevents back-siphonage. (See Figure A-1.4.1.2.(1)-C in Note A-1.4.1.2.(1).)
Backwater valve means a check valve designed for use in a gravity drainage system.
Bathroom group means a group of plumbing fixtures installed in the same room, consisting of one domestic-type lavatory, one water closet and either one bathtub (with or without a shower) or one one-head shower.
Branch means a soil-or-waste pipe connected at its upstream end to the junction of 2 or more soil-or-waste pipes or to a soil-or-waste stack, and connected at its downstream end to another branch, a sump, a soil-or-waste stack or a building drain. (See Figure A-1.4.1.2.(1)-F in Note A-1.4.1.2.(1).)
Branch vent means a vent pipe that is connected at its lower end to the junction of 2 or more vent pipes, and at its upper end, either to another branch vent or to a stack vent, vent stack or vent header, or terminates in open air. (See Figure A-1.4.1.2.(1)-D in Note A-1.4.1.2.(1).)
Building* means any structure used or intended for supporting or sheltering any use or occupancy.
Building drain means the lowest horizontal piping, including any vertical offset, that conducts sewage, clear-water waste or storm water by gravity to a building sewer. (See Figure A-1.4.1.2.(1)-F in Note A-1.4.1.2.(1).)
Building sewer means a pipe that is connected to a building drain 1 m outside a wall of a building and that leads to a public sewer or private sewage disposal system.
Building trap means a trap that is installed in a building drain or building sewer to prevent the circulation of air between a drainage system and a public sewer. (See Note A-2.4.5.4.(1) of Division B.)
Care or detention occupancy means the occupancy or use of a building or part thereof by persons who require special care or treatment because of cognitive or
physical limitations or by persons who are restrained from, or are incapable of, self-preservation because of security measures not under their control.
Check valve means a valve that permits flow in one direction but prevents a return flow.
Circuit vent means a vent pipe that serves a number of fixtures and connects to the fixture drain of the most upstream fixture.
Class 1 fire sprinkler/standpipe system means an assembly of pipes and fittings that conveys water from the water service pipe to the sprinkler/standpipe system's outlets, is directly connected to the public water supply main only, has no pumps or reservoirs, and in which the sprinkler drains discharge to the atmosphere, to dry wells or to other safe outlets.
Class 2 fire sprinkler/standpipe system means a Class 1 fire sprinkler/standpipe system that includes a booster pump in its connection to the public water supply main.
Class 3 fire sprinkler/standpipe system means an assembly of pipes and fittings that conveys water from the water service pipe to the sprinkler/standpipe system's outlets and is directly connected to the public water supply main as well as to one or more of the following storage facilities, which are filled from the public water supply main only: elevated water storage, fire pumps supplying water from aboveground covered reservoirs, or pressure tanks. The water in this sprinkler/standpipe system must be maintained in potable condition. (See Note A-1.4.1.2.(1).)
Class 4 fire sprinkler/standpipe system means an assembly of pipes and fittings that conveys water from the water service pipe to the sprinkler/standpipe system's outlets and is directly connected to the public water supply main (similar to Class 1 and Class 2 fire sprinkler/standpipe systems) and to an auxiliary water supply dedicated to fire department use that is located within 520 m of a pumper connection.
Class 5 fire sprinkler/standpipe system means an assembly of pipes and fittings that conveys water from the water service pipe to the sprinkler/standpipe system's outlets and is directly connected to the public water supply main and also interconnected with an auxiliary water supply.
Class 6 fire sprinkler/standpipe system means an assembly of pipes and fittings that conveys water from the water service pipe to the sprinkler/standpipe system's outlets and acts as a combined industrial water supply and fire protection system supplied from the public water supply main only, with or without gravity storage or pump suction tanks.
Cleanout means an access provided in drainage and venting systems to provide for cleaning and inspection services.
Clear-water waste means waste water with impurity levels that will not be harmful to health and may include cooling water and condensate drainage from refrigeration and air-conditioning equipment and cooled condensate from steam heating systems, but does not include storm water. (See Note A-1.4.1.2.(1).)
Combined building drain means a building drain that is intended to conduct sewage and storm water.
Combined building sewer means a building sewer that is intended to conduct sewage and storm water.
Combined sewer means a sewer that is intended to conduct sewage and storm water.
Combustible* means that a material fails to meet the acceptance criteria of CAN/ULC-S114, "Test for Determination of Non-Combustibility in Building Materials."
Continuous vent means a vent pipe that is an extension of a vertical section of a branch or fixture drain. (See Figure A-1.4.1.2.(1)-E in Note A-1.4.1.2.(1).)
Critical level means the level of submergence at which the back-siphonage preventer ceases to prevent back-siphonage.
Dead end means a pipe that terminates with a closed fitting.
Developed length means the length along the centre line of the pipe and fittings. (See Note A-2.5.6.3.(1) of Division B.)

Directly connected means physically connected in such a way that water or gas cannot escape from the connection.
Drainage system means an assembly of pipes, fittings, fixtures, traps and appurtenances that is used to convey sewage, clear-water waste or storm water to a public sewer or a private sewage disposal system, but does not include subsoil drainage pipes. (See Figure A-1.4.1.2.(1)-F in Note A-1.4.1.2.(1).)
Dual vent means a vent pipe that serves 2 fixtures and connects at the junction of the trap arms. (See Figure A-1.4.1.2.(1)-G in Note A-1.4.1.2.(1).)
Dwelling unit* means a suite operated as a housekeeping unit used or intended to be used by one or more persons and usually containing cooking, eating, living, sleeping and sanitary facilities.
Emergency floor drain means a fixture for the purposes of overflow protection that does not receive regular discharge from other fixtures, other than from a trap primer. (See Note A-1.4.1.2.(1).)
Fire separation* means a construction assembly that acts as a barrier against the spread of fire.
Fire service pipe means a pipe that conveys water from a public water main or private water source to the inside of a building for the purpose of supplying the fire sprinkler or standpipe systems.
Fixture means a receptacle, appliance, apparatus or other device that discharges sewage or clear-water waste, and includes a floor drain.
Fixture drain means the pipe that connects a trap serving a fixture to another part of a drainage system.
Fixture outlet pipe means a pipe that connects the waste opening of a fixture to the trap serving the fixture. (See Figure A-1.4.1.2.(1)-H in Note A-1.4.1.2.(1).)
Fixture unit (as applying to drainage systems) means the unit of measure based on the rate of discharge, time of operation and frequency of use of a fixture that expresses the hydraulic load that is imposed by that fixture on the drainage system.
Fixture unit (as applying to water distribution systems) means the unit of measure based on the rate of supply, time of operation and frequency of use of a fixture or outlet that expresses the hydraulic load that is imposed by that fixture or outlet on the supply system.
Flood level rim means the top edge at which water can overflow from a fixture or device. (See Figure A-1.4.1.2.(1)-B in Note A-1.4.1.2.(1).)
Flow control roof drain means a roof drain that restricts the flow of storm water into the storm drainage system.
Fresh air inlet means a vent pipe that is installed in conjunction with a building trap and terminates outdoors. (See Note A-2.4.5.4.(1) of Division B.)
Indirect service water heater* means a service water heater that derives its heat from a heating medium such as warm air, steam or hot water.
Indirectly connected means not directly connected. (See Note A-2.3.3.11.(2) of Division B.)
Individual vent means a vent pipe that serves one fixture.
Interceptor means a receptacle that is installed to prevent oil, grease, sand or other materials from passing into a drainage system.
Leader means a pipe that is installed to carry storm water from a roof to a storm building drain or sewer or other place of disposal.
Nominally horizontal means at an angle of less than $45^{\circ}$ with the horizontal. (See Figure A-1.4.1.2.(1)-J in Note A-1.4.1.2.(1).)
Nominally vertical means at an angle of not more than $45^{\circ}$ with the vertical. (See Figure A-1.4.1.2.(1)-J in Note A-1.4.1.2.(1).)
Noncombustible* means that a material meets the acceptance criteria of CAN/ULC-S114, "Test for Determination of Non-Combustibility in Building Materials."

Occupancy* means the use or intended use of a building or part thereof for the shelter or support of persons, animals or property.
Offset means the piping that connects the ends of 2 pipes that are parallel. (See Figure A-1.4.1.2.(1)-K in Note A-1.4.1.2.(1).)
Offset relief vent means a relief vent that provides additional air circulation upstream and downstream of an offset in a soil-or-waste stack. (See Note A-2.5.4.4.(1) of Division B.)

Plumbing system* means a drainage system, a venting system and a water system or parts thereof. (See Figure A-1.4.1.2.(1)-L in Note A-1.4.1.2.(1).)
Potable means safe for human consumption.
Private sewage disposal system* means a privately owned plant for the treatment and disposal of sewage (such as a septic tank with an absorption field).
Private use (as applying to the classification of plumbing fixtures) means fixtures in residences and apartments, in private bathrooms of hotels, and in similar installations in other buildings for one family or an individual.

Private water supply system means an assembly of pipes, fittings, valves, equipment and appurtenances that supplies water from a private source to a water distribution system.
Public use (as applying to the classification of plumbing fixtures) means fixtures in general washrooms of schools, gymnasiums, hotels, bars, public comfort stations and other installations where fixtures are installed so that their use is unrestricted.
Relief vent means a vent pipe that is used in conjunction with a circuit vent to provide additional air circulation between a drainage system and a venting system.
Residential full flow-through fire sprinkler/standpipe system means an assembly of pipes and fittings installed in a one- or two-family dwelling that conveys water from the water service pipe to the sprinkler/standpipe system's outlets and is fully integrated into the potable water system to ensure a regular flow of water through all parts of both systems.
Residential partial flow-through fire sprinkler/standpipe system means an assembly of pipes and fittings installed in a one- or two-family dwelling that conveys water from the water service pipe to the sprinkler/standpipe system's outlets and in which flow, during inactive periods of the sprinkler/standpipe system, occurs only through the main header to the water closet located at the farthest point of the two systems.

Riser means a water distribution pipe that extends through at least one full storey.
Roof drain means a fitting or device that is installed in the roof to permit storm water to discharge into a leader.
Roof gutter means an exterior channel installed at the base of a sloped roof to convey storm water.

Sanitary building drain means a building drain that conducts sewage to a building sewer from the most upstream soil-or-waste stack, branch or fixture drain serving a water closet.

Sanitary building sewer means a building sewer that conducts sewage.
Sanitary drainage system* means a drainage system that conducts sewage.
Sanitary sewer means a sewer that conducts sewage.
Service water heater* means a device for heating water for plumbing services.
Sewage means any liquid waste other than clear-water waste or storm water.
Size means the nominal diameter by which a pipe, fitting, trap or other similar item is commercially designated.
Soil-or-waste pipe or waste pipe means a pipe in a sanitary drainage system.
Soil-or-waste stack means a vertical soil-or-waste pipe that passes through one or more storeys, and includes any offset that is part of the stack.
Stack vent means a vent pipe that connects the top of a soil-or-waste stack to a vent header or to outside air. (See Figure A-1.4.1.2.(1)-G in Note A-1.4.1.2.(1).)

Storage-type service water heater* means a service water heater with an integral hot water storage tank.
Storey for the purposes of this Code, means the interval between 2 successive floor levels, including mezzanine floors that contain plumbing fixtures, or between a floor level and roof.
Storm building drain means a building drain that conducts storm water and is connected at its upstream end to a leader, sump or catch basin, and at its downstream end to a building sewer or a designated storm water disposal location.
Storm building sewer means a building sewer that conveys storm water.
Storm drainage system means a drainage system that conveys storm water.
Storm sewer means a sewer that conveys storm water.
Storm water means water that is discharged from a surface as a result of rainfall or snowfall.
Subsoil drainage pipe means a pipe that is installed underground to intercept and convey subsurface water.
Suite* means a single room or series of rooms of complementary use, operated under a single tenancy and includes dwelling units, individual guest rooms in motels, hotels, boarding houses, rooming houses and dormitories, as well as individual stores and individual or complementary rooms for business and personal services occupancies.
Trap means a fitting or device that is designed to hold a liquid seal that will prevent the passage of gas but will not materially affect the flow of a liquid.
Trap arm means that portion of a fixture drain between the trap weir and the vent pipe fitting. (See Note A-2.5.6.3.(1) of Division B.)
Trap dip means the lowest part of the upper interior surface of a trap.
Trap seal depth means the vertical distance between the trap dip and the trap weir. (See Note A-2.2.3.1.(1) and (3) of Division B.)
Trap standard means the trap for a fixture that is integral with the support for the fixture.
Trap weir means the highest part of the lower interior surface of a trap. (See
Note A-2.2.3.1.(1) and (3) of Division B.)
Vacuum breaker (see back-siphonage preventer).
Vent header means a vent pipe that connects any combination of stack vents or vent stacks to outside air. (See Figure A-1.4.1.2.(1)-I in Note A-1.4.1.2.(1).)
Vent pipe means a pipe that is part of a venting system.
Vent stack means a vent pipe that is connected at its upper end to a vent header or that terminates in outside air and is connected at its lower end to the soil-or-waste stack at or below the lowest soil-or-waste pipe connection. (See Figure A-1.4.1.2.(1)-G in Note A-1.4.1.2.(1).)
Venting system means an assembly of pipes and fittings that connects a drainage system with outside air for circulation of air and the protection of trap seals in the drainage system. (See Figures A-1.4.1.2.(1)-F and A-1.4.1.2.(1)-G in Note A-1.4.1.2.(1).)
Waste pipe (see soil-or-waste pipe).
Water distribution system means an assembly of pipes, fittings, valves and appurtenances that conveys water from the water service pipe or private water supply system to water supply outlets, fixtures, appliances and devices.
Water service pipe means a pipe that conveys water from a public water main or private water source to the inside of the building.
Water system means a private water supply system, a water service pipe, a water distribution system or parts thereof.
Wet vent means a soil-or-waste pipe that also serves as a vent pipe and extends from the most downstream wet-vented fixture connection to the most upstream fixture connection. (See Note A-2.5.8.1.(2) of Division B.)

Yoke vent means a vent pipe that is connected at its lower end to a soil-or-waste stack and at its upper end to a vent stack or to a branch vent connected to a vent stack. (See Note A-2.5.4.3. of Division B.)

### 1.4.2. Symbols and Other Abbreviations

### 1.4.2.1. Symbols and Other Abbreviations

1) The symbols and other abbreviations in this Code shall have the meanings assigned to them in this Article and in Article 1.3.2.1. of Division B.
ABS $\qquad$ acrylonitrile-butadiene-styrene

AL $\qquad$ aluminum
$\mathrm{cm}^{2}$ $\qquad$ square centimetre(s)
CPVC $\qquad$ chlorinated polyvinyl chloride

## Section 1.5. Referenced Documents and Organizations

### 1.5.1. Referenced Documents

### 1.5.1.1. Application of Referenced Documents

1) Except as provided in Sentence (2), the provisions of documents referenced in this Code, and of any documents referenced within those documents, apply only to the extent that they relate to
a) plumbing systems, and
b) the objectives and functional statements attributed to the applicable acceptable solutions in Division B where the documents are referenced. (See Note A-1.5.1.1.(1).)
2) Where a provision of this Code references another National Model Code, the applicable objectives and functional statements shall include those found in that referenced National Model Code.

### 1.5.1.2. Conflicting Requirements

1) In case of conflict between the provisions of this Code and those of a referenced document, the provisions of this Code shall govern.

### 1.5.1.3. Applicable Editions

1) Where documents are referenced in this Code, they shall be the editions designated in Subsection 1.3.1. of Division B.

### 1.5.2. Organizations

### 1.5.2.1. Abbreviations of Proper Names

1) The abbreviations of proper names in this Code shall have the meanings assigned to them in Article 1.3.2.1. of Division B.

# Notes to Part 1 Compliance 

A-1.2.1.1.(1)(a) Code Compliance via Acceptable Solutions. If a plumbing system design (e.g., material, component, assembly or system) can be shown to meet all provisions of the applicable acceptable solutions in Division B (e.g., it complies with the applicable provisions of a referenced standard), it is deemed to have satisfied the objectives and functional statements linked to those provisions and thus to have complied with that part of the Code. In fact, if it can be determined that a design meets all the applicable acceptable solutions in Division B, there is no need to consult the objectives and functional statements in Division A to determine its compliance.

A-1.2.1.1.(1)(b) Code Compliance via Alternative Solutions. Where a design differs from the acceptable solutions in Division B, then it should be treated as an "alternative solution." A proponent of an alternative solution must demonstrate that the alternative solution addresses the same issues as the applicable acceptable solutions in Division B and their attributed objectives and functional statements. However, because the objectives and functional statements are entirely qualitative, demonstrating compliance with them in isolation is not possible. Therefore, Clause 1.2.1.1.(1)(b) identifies the principle that Division B establishes the quantitative performance targets that alternative solutions must meet. In many cases, these targets are not defined very precisely by the acceptable solutions - certainly far less precisely than would be the case with a true performance code, which would have quantitative performance targets and prescribed methods of performance measurement for all aspects of building performance. Nevertheless, Clause 1.2.1.1.(1)(b) makes it clear that an effort must be made to demonstrate that an alternative solution will perform as well as a design that would satisfy the applicable acceptable solutions in Division B - not "well enough" but "as well as."

In this sense, it is Division B that defines the boundaries between acceptable risks and the "unacceptable" risks referred to in the statements of the Code's objectives, i.e., the risk remaining once the applicable acceptable solutions in Division B have been implemented represents the residual level of risk deemed to be acceptable by the broad base of Canadians who have taken part in the consensus process used to develop the Code.

## Level of Performance

Where Division B offers a choice between several possible designs, it is likely that these designs may not all provide exactly the same level of performance. Among a number of possible designs satisfying acceptable solutions in Division B, the design providing the lowest level of performance should generally be considered to establish the minimum acceptable level of performance to be used in evaluating alternative solutions for compliance with the Code.
Sometimes a single design will be used as an alternative solution to several sets of acceptable solutions in Division B. In this case, the level of performance required of the alternative solution should be at least equivalent to the overall level of performance established by all the applicable sets of acceptable solutions taken as a whole.

Each provision in Division B has been analyzed to determine what it is intended to achieve. The resultant intent statements clarify what undesirable results each provision seeks to preclude. These statements are not a legal component of the Code, but are advisory in nature, and can help Code users establish performance targets for alternative solutions. They are published as part of the online Code subscriptions and as a separate electronic document entitled "Supplement to the NPC 2015: Intent Statements," which is available on NRC's Web site.

[^1]
#### Abstract

Areas of Performance A subset of the acceptable solutions in Division B may establish criteria for particular types of designs (e.g. certain types of materials, components, assemblies, or systems). Often such subsets of acceptable solutions are all attributed to the same objective: Sanitation for example. In some cases, the designs that are normally used to satisfy this subset of acceptable solutions might also provide some benefits that could be related to some other objective: Protection of the Building or Facility from Water and Sewage Damage for example. However, if none of the applicable acceptable solutions are linked to Objective OP5, Protection of the Building or Facility from Water and Sewage Damage, it is not necessary that alternative solutions proposed to replace these acceptable solutions provide a similar benefit related to Protection of the Building or Facility from Water and Sewage Damage. In other words, the acceptable solutions in Division B establish acceptable levels of performance for compliance with the Code only in those areas defined by the objectives and functional statements attributed to the acceptable solutions.

## Applicable Acceptable Solutions

In demonstrating that an alternative solution will perform as well as a design that would satisfy the applicable acceptable solutions in Division B, its evaluation should not be limited to comparison with the acceptable solutions to which an alternative is proposed. It is possible that acceptable solutions elsewhere in the Code also apply. The proposed alternative solution may be shown to perform as well as the most apparent acceptable solution, which it is replacing, but may not perform as well as other relevant acceptable solutions. For example, an innovative piping material may perform adequately in a drainage system but may not meet combustibility requirements elsewhere in the Code. All applicable acceptable solutions should be taken into consideration in demonstrating the compliance of an alternative solution.

## A-1.4.1.2.(1) Defined Terms.

## Auxiliary Water Supply

The auxiliary water supply may include water from a secondary potable water supply or from any natural source, such as a well, lake, spring, stream or harbour. It may also include waste water (but not sanitary drainage) from industrial processes, such as cooling towers, or from storm retention ponds. These sources may be polluted or contaminated and constitute an unacceptable water source over which the primary water purveyor does not have sanitary control. It is generally accepted that there are two categories of auxiliary water supply:
(a) any public potable water supply over which the primary water purveyor does not have sanitary control, or
(b) any private water supply, other than the primary potable water supply, that is on or available to the premises.

## Class 3 Fire Sprinkler/Standpipe Systems

In Class 3 fire sprinkler/standpipe systems, water is supplied to the storage facilities from the public water supply and is maintained in potable condition. Class 3 fire sprinkler/standpipe systems resemble Class 1 fire sprinkler/standpipe systems in all other respects.

## Clear-Water Waste

Examples of clear-water waste are the waste waters discharged from a drinking fountain, cooling jacket, air conditioner or relief valve outlet.

## Emergency Floor Drains

There are two types of floor drains. One is an emergency floor drain installed to avoid flooding in a building from any pipe or fixture failure. The other encompasses floor drains installed to receive discharge from specific pieces of equipment; this type is defined as a fixture.

## Illustrations for Defined Terms

Figure A-1.4.1.2.(1)-A Backflow Preventer

Figure A-1.4.1.2.(1)-B

## Back-siphonage

Notes to Figure A-1.4.1.2.(1)-B:
(1) Figure $A-1.4 \cdot 1.2$.(1)-B shows a situation that is fairly common in old buildings. If the bathtub is filled to a level above the faucet outlet, or if the flush valve of the water closet is faulty, and if the faucet at the sink or lavatory on the lower floor is opened, water can be drawn (siphoned) from the bathtub or the water closet into the water system when the pressure in the water system is low or the water supply has been shut off.
(2) Back-siphonage can be prevented in the above situations by providing an air gap or a back-siphonage preventer (see Subsection 2.6.2. of Division B).

## Fixture Outlet Pipe and Trap Arm

Figure A-1.4.1.2.(1)-I

## Vent Header

Note to Figure A-1.4.1.2.(1)-I:
(1) Although a vent header is similar to a branch vent, it serves the special purpose of connecting the tops of stack vents or vent stacks. To make certain that it is adequate for that purpose, it is made larger than a branch vent. The developed length used to determine its size is the total length from the most distant soil-or-waste pipe to outside air, rather than the shorter length used to size a branch vent.

A-1.5.1.1.(1) Application of Referenced Documents. Documents referenced in the NPC may contain provisions covering a wide range of issues, including issues that are unrelated to the objectives and functional statements stated in Parts 2 and 3 of Division A respectively; e.g. conservation of water resources. Sentence 1.5.1.1.(1) is intended to make it clear that, whereas referencing these documents in the NPC generally has the effect of making the provisions of those documents part of the Code, provisions that are unrelated to plumbing systems or to the objectives and functional statements attributed to the provisions in Division $B$ where the document is referenced are excluded.
Furthermore, many documents referenced in the NPC contain references to other documents, which may also, in turn, refer to other documents. These secondary and tertiary referenced documents may contain provisions that are unrelated to plumbing systems or to the objectives and functional statements of the NPC: such provisions-no matter how far down the chain of references they occur-are not included in the intent of Sentence 1.5.1.1.(1).

## Division A

## Part 2 Objectives

2.1. Application
2.1.1 Application ..... 2-1
2.2. Objectives
2.2.1. Objectives ..... 2-1
Notes to Part 2 ..... 2-5

## Part 2 <br> Objectives

## Section 2.1. Application

### 2.1.1. Application

### 2.1.1.1. Application

1) This Part applies to all plumbing systems covered in this Code. (See Article 1.1.1.1.)

### 2.1.1.2. Application of Objectives

1) The objectives described in this Part apply
a) to all plumbing systems covered in this Code (see Article 1.1.1.1.), and
b) only to the extent that they relate to compliance with this Code as required in Article 1.2.1.1.

## Section 2.2. Objectives

### 2.2.1. Objectives

### 2.2.1.1. Objectives

1) The objectives of this Code are as follows (see Note A-2.2.1.1.(1)):

## $0 S$ Safety

An objective of this Code is to limit the probability that, as a result of the design or installation of the plumbing system, a person in or adjacent to the building or facility will be exposed to an unacceptable risk of injury.

## OS1 Fire Safety

An objective of this Code is to limit the probability that, as a result of the design or installation of the plumbing system, a person in or adjacent to the building or facility will be exposed to an unacceptable risk of injury due to fire. The risks of injury due to fire addressed in this Code are those caused by -
OS1.1 - fire or explosion occurring
OS1.4 - fire safety systems failing to function as expected

## OS2 Structural Safety

An objective of this Code is to limit the probability that, as a result of the design or installation of the plumbing system, a person in or adjacent to the building will be exposed to an unacceptable risk of injury due to structural failure. The risks of injury due to structural failure addressed in this Code are those caused by -
OS2.1 - loads bearing on the building elements that exceed their load-bearing capacity

## OS3 Safety in Use

An objective of this Code is to limit the probability that, as a result of the design or installation of the plumbing system, a person in or adjacent to the building or facility will be exposed to an unacceptable risk of injury due to hazards. The risks of injury due to hazards addressed in this Code are those caused by -
OS3.1 - tripping, slipping, falling, contact, drowning or collision
OS3.2 - contact with hot surfaces or substances
OS3.4 - exposure to hazardous substances

## OH Health

An objective of this Code is to limit the probability that, as a result of the design or installation of the plumbing system, a person will be exposed to an unacceptable risk of illness.

## OH1 Indoor Conditions

An objective of this Code is to limit the probability that, as a result of the design or installation of the plumbing system, a person in the building or facility will be exposed to an unacceptable risk of illness due to indoor conditions. The risks of illness due to indoor conditions addressed in this Code are those caused by-
OH1.1 - inadequate indoor air quality

## OH2 Sanitation

An objective of this Code is to limit the probability that, as a result of the design or installation of the plumbing system, a person in the building or facility will be exposed to an unacceptable risk of illness due to unsanitary conditions. The risks of illness due to unsanitary conditions addressed in this Code are those caused by-
OH 2.1 - exposure to human or domestic waste
OH2.2 - consumption of contaminated water
OH 2.3 - inadequate facilities for personal hygiene
OH 2.4 - contact with contaminated surfaces

## OH5 Hazardous Substances Containment

An objective of this Code is to limit the probability that, as a result of the design or installation of the plumbing system, the public will be exposed to an unacceptable risk of illness due to the release of hazardous substances from the building or facility.

## OP Protection of the Building or Facility from Water and Sewage Damage

## OP5 Protection of the Building or Facility from Water and Sewage Damage

An objective of this Code is to limit the probability that, as a result of the design or installation of the plumbing system, the building or facility will be exposed to an unacceptable risk of damage due to the leakage of service water or sewage.

## OE Environment

An objective of this Code is to limit the probability that, as a result of the design or installation of the plumbing system, the environment will be affected in an unacceptable manner.

## OE1 Resources

An objective of this Code is to limit the probability that, as a result of the design or installation of the plumbing system, resources will be used in a manner that will have an unacceptable effect on the environment. The risks of unacceptable effect on the environment due to use of resources addressed in this Code are those caused by -
OE1.2 - excessive use of water

## Division A

## Notes to Part 2 Objectives

## A-2.2.1.1.(1) Objectives.

## Listing of objectives

Any gaps in the numbering sequence of the objectives are due to the fact that there is a master list of objectives covering the four principal National Code Documents - the National Building Code, the National Energy Code for Buildings, the National Fire Code and the National Plumbing Code-but not all objectives are pertinent to all Codes.

## The building or facility

Where the term "the building or facility" is used in the wording of the objectives, it refers to the building or facility for which compliance with the National Plumbing Code is being assessed.

3.1. Application3.1.1 Application3-1
3.2. Functional Statements3.2.1.Functional Statements3-1
Notes to Part 3 ..... 3-3

## Part 3 <br> Functional Statements

## Section 3.1. Application

### 3.1.1. Application

### 3.1.1.1. Application

1) This Part applies to all plumbing systems covered in this Code. (See Article 1.1.1.1.)

### 3.1.1.2. Application of Functional Statements

1) The functional statements described in this Part apply
a) to all plumbing systems covered in this Code (see Article 1.1.1.1.), and
b) only to the extent that they relate to compliance with this Code as required in Article 1.2.1.1.

## Section 3.2. Functional Statements

### 3.2.1. Functional Statements

### 3.2.1.1. Functional Statements

1) The objectives of this Code are achieved by measures, such as those described in the acceptable solutions in Division B, that are intended to allow the plumbing system to perform the following functions (see Note A-3.2.1.1.(1)):

F01 To minimize the risk of accidental ignition.
F02 To limit the severity and effects of fire or explosions.
F20 To support and withstand expected loads and forces.
F21 To limit or accommodate dimensional change.
F30 To minimize the risk of injury to persons as a result of tripping, slipping, falling, contact, drowning or collision.
F31 To minimize the risk of injury to persons as a result of contact with hot surfaces or substances.

F40 To limit the level of contaminants.
F41 To minimize the risk of generation of contaminants.
F43 To minimize the risk of release of hazardous substances.
F45 To minimize the risk of the spread of disease through communal shower facilities.
F46 To minimize the risk of contamination of potable water.
F62 To facilitate the dissipation of water and moisture from the building.

F70 To provide potable water.

F71 To provide facilities for personal hygiene.
F72 To provide facilities for the sanitary disposal of human and domestic wastes.

F80 To resist deterioration resulting from expected service conditions.
F81 To minimize the risk of malfunction, interference, damage, tampering, lack of use or misuse.
F82 To minimize the risk of inadequate performance due to improper maintenance or lack of maintenance.

F130 To limit the unnecessary demand and/or consumption of water for fixtures.
F131 To limit the unnecessary demand and/or consumption of water for fittings.

## Division A

## Notes to Part 3 <br> Functional Statements

A-3.2.1.1.(1) Listing of Functional Statements. The numbered functional statements are grouped according to functions that deal with closely related subjects. For example, the first group deals with fire risks, the second group deals with the structural properties of piping materials, etc. There may be gaps in the numbering sequence for the following reasons:

- Each group has unused numbers which allows for the possible future creation of additional functional statements within any one group.
- There is a master list of functional statements covering the four principal National Code Documents-the National Building Code, the National Energy Code for Buildings, the National Fire Code and the National Plumbing Code-but not all functional statements are pertinent to all Codes.

## Part 1 <br> General

## Section 1.1. General

### 1.1.1. Application

### 1.1.1.1. Application

1) This Part applies to all plumbing systems covered in this Code. (See Article 1.1.1.1. of Division A.)

### 1.1.2. Objectives and Functional Statements

### 1.1.2.1. Attribution to Acceptable Solutions

1) For the purposes of compliance with this Code as required in Clause 1.2.1.1.(1)(b) of Division A, the objectives and functional statements attributed to the acceptable solutions in Division B shall be the objectives and functional statements identified in Section 2.8. (See Note A-1.1.2.1.(1).)

## Section 1.2. Terms and Abbreviations

### 1.2.1. Definitions of Words and Phrases

### 1.2.1.1. Non-defined Terms

1) Words and phrases used in Division $B$ that are not included in the list of definitions in Article 1.4.1.2. of Division A shall have the meanings that are commonly assigned to them in the context in which they are used, taking into account the specialized use of terms by the various trades and professions to which the terminology applies.
2) Where objectives and functional statements are referred to in Division $B$, they shall be the objectives and functional statements described in Parts 2 and 3 of Division A.
3) Where acceptable solutions are referred to in Division B, they shall be the provisions stated in Part 2.

### 1.2.1.2. Defined Terms

1) The words and terms in italics in Division $B$ shall have the meanings assigned to them in Article 1.4.1.2. of Division A.

### 1.2.2. Symbols and Other Abbreviations

### 1.2.2.1. Symbols and Other Abbreviations

1) The symbols and other abbreviations in Division $B$ shall have the meanings assigned to them in Article 1.4.2.1. of Division A and Article 1.3.2.1.

## Section 1.3. Referenced Documents and Organizations

### 1.3.1. Referenced Documents

### 1.3.1.1. Effective Date

1) Unless otherwise specified herein, the documents referenced in this Code shall include all amendments, revisions, reaffirmations, reapprovals, addenda and supplements effective to 30 June 2017.

### 1.3.1.2. Applicable Editions

1) Where documents are referenced in this Code, they shall be the editions designated in Table 1.3.1.2.

### 1.3.2. Organizations

### 1.3.2.1. Abbreviations of Proper Names

1) The abbreviations of proper names in this Code shall have the meanings assigned to them in this Article.
ANSI ............ American National Standards Institute (www.ansi.org)
ASHRAE ..... American Society of Heating, Refrigerating and Air-Conditioning Engineers (www.ashrae.org)
ASME .......... American Society of Mechanical Engineers (www.asme.org)
ASPE ............ American Society of Plumbing Engineers (www.aspe.org)
ASSE ............ American Society of Sanitary Engineering (www.asse-plumbing.org)
ASTM .......... American Society for Testing and Materials International (www.astm.org)
AWS $\qquad$ American Welding Society (www.aws.org)

AWWA ........ American Water Works Association (www.awwa.org)
CAN ............. National Standard of Canada designation
CCBFC ......... Canadian Commission on Building and Fire Codes (see NRC)
CGSB ........... Canadian General Standards Board
(www.tpsgc-pwgsc.gc.ca/ongc-cgsb/index-eng.html)
CSA $\qquad$ CSA Group (www.csagroup.org)
NBC $\qquad$ National Building Code of Canada 2015
NFC $\qquad$ National Fire Code of Canada 2015
NFPA $\qquad$National Fire Protection Association (www.nfpa.org)

NIST $\qquad$ National Institute of Standards and Technology (www.nist.gov)
NPC $\qquad$ National Plumbing Code of Canada 2015
NRC $\qquad$ National Research Council of Canada (Ottawa, Ontario K1A 0R6; www.nrc-cnrc.gc.ca)
NRC-IRC ..... National Research Council of Canada, Institute for Research in Construction (former name of the NRC Construction Research Centre)

ULC $\qquad$ ULC Standards (canada.ul.com/ulcstandards)

## Division B

## Notes to Part 1 <br> General

## A-1.1.2.1.(1) Objectives and Functional Statements Attributed to Acceptable

Solutions. The objectives and functional statements attributed to each Code provision are shown in Table 2.8.1.1.

Many provisions in Division B serve as modifiers of or pointers to other provisions or serve other clarification or explanatory purposes. In most cases, no objectives and functional statements have been attributed to such provisions, which therefore do not appear in the above-mentioned table.
For provisions that serve as modifiers of or pointers to other referenced provisions and that do not have any objectives and functional statements attributed to them, the objectives and functional statements that should be used are those attributed to the provisions they reference.

These Notes are included for explanatory purposes only and do not form part of the requirements. The number that introduces each Note corresponds to the applicable requirement in this Part.

## Part 2 <br> Plumbing Systems

## Section 2.1. General

### 2.1.1. Application

### 2.1.1.1. Application

1) This Part applies to all plumbing systems covered in this Code. (See Article 1.1.1.1. of Division A.)

### 2.1.2. Service Connections

### 2.1.2.1. Sanitary Drainage Systems

1) Except as provided in Subsection 2.7.4., every sanitary drainage system shall be connected to a public sanitary sewer, a public combined sewer or a private sewage disposal system.
2) A combined building drain shall not be installed. (See Note A-2.1.2.1.(2).)

### 2.1.2.2. Storm Drainage Systems

1) Except as provided in Subsection 2.7.4., every storm drainage system shall be connected to a public storm sewer, a public combined sewer or a designated storm water disposal location.

### 2.1.2.3. Water Distribution Systems

1) Except as provided in Subsection 2.7.4., every water distribution system shall be connected to a public water main or a potable private water supply system.

### 2.1.2.4. Separate Services

1) Piping in any building connected to the public services shall be connected separately from piping of any other building, except that an ancillary building on the same property may be served by the same service. (See Note A-2.1.2.4.(1).)

### 2.1.3. Location of Fixtures

### 2.1.3.1. Lighting and Ventilation Requirements

1) Plumbing fixtures shall not be installed in a room that is not lighted and ventilated in accordance with the appropriate requirements in Parts 3, 6 and 9 of Division B of the NBC.

### 2.1.3.2. Accessibility

1) Every fixture, appliance, interceptor, cleanout, valve, device or piece of equipment shall be located so that it is readily accessible for use, cleaning and maintenance.

## Section 2.2. Materials and Equipment

### 2.2.1. General

### 2.2.1.1. Exposure of Materials

1) Where unusual conditions exist, such as excessively corrosive soil or water, only materials suited for use in such locations shall be used.
2) Materials and equipment used in a drainage system where excessively corrosive wastes are present shall be suitable for the purpose.

### 2.2.1.2. Restrictions on Re-Use

1) Materials and equipment that have been used for a purpose other than the distribution of potable water shall not be subsequently used in a potable water system.

### 2.2.1.3. Identification

1) Every length of pipe and every fitting shall
a) have cast, stamped or indelibly marked on it the maker's name or mark and the weight or class or quality of the product, or
b) be marked in accordance with the relevant standard.
2) Markings required in Sentence (1) shall be visible after installation.

### 2.2.1.4. Pipe or Piping

1) Where the term pipe or piping is used, it shall also apply to tube or tubing unless otherwise stated.

### 2.2.1.5. Withstanding Pressure

1) Piping, fittings and joints used in pressure sewer, forcemain or sump pump discharge applications shall be capable of withstanding at least one and one-half times the maximum potential pressure.

### 2.2.1.6. Working Pressure of a Water Service Pipe

1) The working pressure rating of a water service pipe shall not be less than the maximum water main pressure at their point of connection as established by the water supply authority.

### 2.2.2. Fixtures

### 2.2.2.1. Surface Requirements

1) Every fixture shall have a smooth, hard, corrosion-resistant surface free of flaws and blemishes that may interfere with cleaning.

### 2.2.2.2. Conformance to Standards

1) Except as provided in Article 2.2.2.3.,
a) fixtures shall conform to CAN/CSA-B45 Series, "Plumbing Fixtures,"
b) vitreous china fixtures shall conform to ASME A112.19.2/CSA B45.1, "Ceramic Plumbing Fixtures,"
c) enamelled cast-iron fixtures shall conform to ASME A112.19.1/CSA B45.2, "Enamelled Cast Iron and Enamelled Steel Plumbing Fixtures,"
d) porcelain-enamelled steel fixtures shall conform to ASME A112.19.1/CSA B45.2, "Enamelled Cast Iron and Enamelled Steel Plumbing Fixtures,"
e) stainless steel fixtures shall conform to ASME A112.19.3/CSA B45.4, "Stainless Steel Plumbing Fixtures,"
f) plastic fixtures shall conform to CSA B45.5/IAPMO Z124, "Plastic Plumbing Fixtures,"
g) hydromassage bathtubs shall conform to ASME A112.19.7/CSA B45.10, "Hydromassage Bathtub Systems," and
h) macerating toilet systems shall conform to ASME A112.3.4/CSA B45.9, "Plumbing Fixtures with Pumped Waste and Macerating Toilet Systems."

### 2.2.2.3. Showers

1) Shower receptors shall be constructed and arranged so that water cannot leak through the walls or floor.
2) Not more than 6 shower heads shall be served by a single shower drain.
3) Where 2 or more shower heads are served by a shower drain, the floor shall be sloped and the drain located so that water from one head cannot flow over the area that serves another head. (See Note A-2.2.2.3.(3).)
4) Except for column showers, when a battery of shower heads is installed, the horizontal distance between 2 adjacent shower heads shall be not less than 750 mm .

### 2.2.2.4. Concealed Overflows

1) A dishwashing sink and a food preparation sink shall not have concealed overflows. (See Note A-2.2.2.4.(1).)

### 2.2.2.5. Water Closets in Public Washrooms

1) When a water closet is installed in a washroom for public use, it shall be of the elongated type and provided with a seat of the open front type.

### 2.2.3. Traps and Interceptors

### 2.2.3.1. Traps

1) Except as provided for in Sentence (2), traps shall
a) have a trap seal depth of not less than 38 mm ,
b) be so designed that failure of the seal walls will cause exterior leakage, and
c) have a water seal that does not depend on the action of moving parts.
(See Note A-2.2.3.1.(1) and (3).)
2) The trap seal depth on fixtures draining to an acid waste system shall be a minimum of 50 mm .
3) Except for a floor-mounted service sink, every trap that serves a lavatory, a sink or a laundry tray shall
a) be provided with a cleanout plug located at the lowest point of the trap and of the same material as the trap, except that a cast-iron trap shall be provided with a brass cleanout plug, or
b) be designed so that part of the trap can be removed for cleaning purposes. (See Note A-2.2.3.1.(1) and (3).)
4) A bell trap shall not be installed in a drainage system. (See Note A-2.2.3.1.(4).)
5) A drum trap shall not be used as a fixture trap unless required to serve as an interceptor and access for servicing is provided.

### 2.2.3.2. Interceptors

1) Interceptors shall be designed so that they can be readily cleaned.
2) Grease interceptors shall
a) be designed so that they do not become air bound, and
b) not have a water jacket.
3) Grease interceptors shall be selected and installed in conformance with
a) CSA B481.0, "Material, Design, and Construction Requirements for Grease Interceptors," and
b) CSA B481.3, "Sizing, Selection, Location, and Installation of Grease Interceptors."
(See Note A-2.2.3.2.(3).)

### 2.2.3.3. Tubular Traps

1) Tubular metal or plastic traps conforming to ASME A112.18.2/CSA B125.2, "Plumbing Waste Fittings," shall be used only in accessible locations.

### 2.2.4. Pipe Fittings

### 2.2.4.1. $\quad$ T and Cross Fittings

(See Note A-2.2.4.1.)

1) A T fitting shall not be used in a drainage system, except to connect a vent pipe.
2) A cross fitting shall not be used in a drainage system.

### 2.2.4.2. Sanitary T Fittings

(See Note A-2.2.4.2.)

1) A single or double sanitary $T$ fitting shall not be used in a nominally horizontal soil-or-waste pipe, except that a single sanitary T fitting may be used to connect a vent pipe.
2) A double sanitary $T$ fitting shall not be used to connect the trap arms of
a) back outlet water closets installed back-to-back, or
b) 2 urinals where no cleanout fitting is provided above the connection.

### 2.2.4.3. $\quad 90^{\circ}$ Elbows

1) Except as permitted in Sentence (2), $90^{\circ}$ elbows of 4 inch size or less whose centre-line radius is less than the size of the pipe shall not be used to join 2 soil-or-waste pipes.
2) For sanitary drainage systems of 4 inch size or less, $90^{\circ}$ elbows described in Sentence (1) shall only be permitted
a) to change the direction of piping from horizontal to vertical, in the direction of flow,
b) where a trap arm enters a wall, or
c) to connect trap arms as permitted by Sentence 2.5.6.3.(2).

### 2.2.5. Non-Metallic Pipe and Fittings

(For a summary of pipe applications, see Note A-2.2.5., 2.2.6. and 2.2.7.)

### 2.2.5.1. Concrete Pipe and Fittings

1) Concrete pipe shall conform to
a) CSA A257.1, "Non-Reinforced Circular Concrete Culvert, Storm Drain, Sewer Pipe, and Fittings," or
b) CSA A257.2, "Reinforced Circular Concrete Culvert, Storm Drain, Sewer Pipe, and Fittings."
2) Joints with internal elastomeric gaskets shall conform to CSA A257.3, "Joints for Circular Concrete Sewer and Culvert Pipe, Manhole Sections, and Fittings Using Rubber Gaskets."
3) Concrete fittings fabricated on the site from lengths of pipe shall not be used. (See Note A-2.2.5.1.(3).)
4) Concrete pipe shall not be used above ground inside a building.
5) Precast reinforced circular concrete manhole sections, catch basins and fittings shall conform to CSA A257.4, "Precast Reinforced Circular Concrete Manhole Sections, Catch Basins, and Fittings."

### 2.2.5.2. Vitrified Clay Pipe and Fittings

1) Vitrified clay pipe and fittings shall conform to CSA A60.1-M, "Vitrified Clay Pipe."
2) Couplings and joints for vitrified clay pipe shall conform to CSA A $60.3-\mathrm{M}$, "Vitrified Clay Pipe Joints."
3) Vitrified clay pipe and fittings shall not be used except for an underground part of a drainage system.

### 2.2.5.3. Polyethylene Pipe and Fittings

1) Polyethylene water pipe, tubing and fittings shall conform to Series 160 of CSA B137.1, "Polyethylene (PE) Pipe, Tubing, and Fittings for Cold-Water Pressure Services."
2) Polyethylene water pipe shall not be used except for a water service pipe.
3) Butt fusion fittings for polyethylene pipe shall conform to ASTM D 3261 , "Butt Heat Fusion Polyethylene (PE) Plastic Fittings for Polyethylene (PE) Plastic Pipe and Tubing."

### 2.2.5.4. Polyethylene Pipe Used Underground

1) Polyethylene pipe used underground outside a building for the rehabilitation of existing drainage systems using trenchless technology shall conform to ASTM F 714, "Polyethylene (PE) Plastic Pipe (DR-PR) Based on Outside Diameter," and shall be HDPE 3408 and SDR 11 or heavier. (See Note A-2.2.5.4.(1).)

### 2.2.5.5. Crosslinked Polyethylene Pipe and Fittings

1) Crosslinked polyethylene pipe and its associated fittings used in hot and cold potable water systems shall conform to CSA B137.5, "Crosslinked Polyethylene (PEX) Tubing Systems for Pressure Applications." (See Note A-2.2.5.5.(1).)

### 2.2.5.6. PVC Pipe and Fittings

1) PVC water pipe, fittings and solvent cement shall
a) conform to CSA B137.3, "Rigid Polyvinylchloride (PVC) Pipe and Fittings for Pressure Applications," and
b) have a pressure rating of not less than 1100 kPa .
2) PVC water pipe fittings shall conform to
a) ASTM D 2466, "Poly(Vinyl Chloride) (PVC) Plastic Pipe Fittings, Schedule $40, "$ or
b) ASTM D 2467, "Poly(Vinyl Chloride) (PVC) Plastic Pipe Fittings, Schedule 80."
3) PVC injection-moulded gasketed fittings shall conform to CSA B137.2, "Polyvinylchloride (PVC) Injection-Moulded Gasketed Fittings for Pressure Applications."
4) PVC water pipe and fittings referred to in Sentences (1), (2) and (3) shall not be used in a hot water system.

### 2.2.5.7. CPVC Pipe, Fittings and Solvent Cements

1) CPVC hot and cold water pipe, fittings and solvent cements shall conform to CSA B137.6, "Chlorinated Polyvinylchloride (CPVC) Pipe, Tubing, and Fittings for Hot- and Cold-Water Distribution Systems."
2) The design temperature and design pressure of a CPVC piping system shall conform to Table 2.2.5.7.

Table 2.2.5.7.
Maximum Permitted Pressure for CPVC Piping at Various Temperatures Forming Part of Sentence 2.2.5.7.(2)

| Maximum Temperature of Water, ${ }^{\circ} \mathrm{C}$ | Maximum Permitted Pressures, kPa |
| :---: | :---: |
| 10 | 3150 |
| 20 | 2900 |
| 30 | 2500 |
| 40 | 2100 |
| 50 | 1700 |
| 60 | 1300 |
| 70 | 1000 |
| 82 | 690 |

### 2.2.5.8. Plastic Pipe, Fittings and Solvent Cement Used Underground

 (See Note A-2.2.5.8. to 2.2.5.10.)1) Plastic pipe, fittings and solvent cement used underground outside a building or under a building in a drainage system shall conform to
a) ASTM F 628, "Acrylonitrile-Butadiene-Styrene (ABS) Schedule 40 Plastic Drain, Waste, and Vent Pipe With a Cellular Core,"
b) CAN/CSA-B181.1, "Acrylonitrile-Butadiene-Styrene (ABS) Drain, Waste, and Vent Pipe and Pipe Fittings,"
c) CAN/CSA-B181.2, "Polyvinylchloride (PVC) and Chlorinated Polyvinylchloride (CPVC) Drain, Waste, and Vent Pipe and Pipe Fittings,"
d) CAN/CSA-B182.1, "Plastic Drain and Sewer Pipe and Pipe Fittings," with a pipe stiffness not less than 320 kPa ,
e) CAN/CSA-B182.2, "PSM Type Polyvinylchloride (PVC) Sewer Pipe and Fittings," with a pipe stiffness not less than 320 kPa ,
f) CAN/CSA-B182.4, "Profile Polyvinylchloride (PVC) Sewer Pipe and Fittings," with a pipe stiffness not less than 320 kPa ,
g) CAN/CSA-B182.6, "Profile Polyethylene (PE) Sewer Pipe and Fittings For Leak-Proof Sewer Applications," with a pipe stiffness of not less than 320 kPa , or
h) CAN/CSA-B182.8, "Profile Polyethylene (PE) Storm Sewer and Drainage Pipe and Fittings," for Type 1 joints and non-perforated pipes.

### 2.2.5.9. Transition Solvent Cement

(See Note A-2.2.5.8. to 2.2.5.10.)

1) Solvent cement for transition joints shall conform to
a) CAN/CSA-B181.1, "Acrylonitrile-Butadiene-Styrene (ABS) Drain, Waste, and Vent Pipe and Pipe Fittings," or
b) CAN/CSA-B181.2, "Polyvinylchloride (PVC) and Chlorinated Polyvinylchloride (CPVC) Drain, Waste, and Vent Pipe and Pipe Fittings."
2) Transition solvent cement shall only be used for joining an ABS drainage system to a PVC drainage system.
2.2.5.10. Plastic Pipe, Fittings and Solvent Cement Used in Buildings
(See Note A-2.2.5.8. to 2.2.5.10.)
3) Plastic pipe, fittings and solvent cement used inside or under a building in a drainage or venting system shall conform to
a) ASTM F 628, "Acrylonitrile-Butadiene-Styrene (ABS) Schedule 40 Plastic Drain, Waste, and Vent Pipe With a Cellular Core,"
b) CAN/CSA-B181.1, "Acrylonitrile-Butadiene-Styrene (ABS) Drain, Waste, and Vent Pipe and Pipe Fittings," or
c) CAN/CSA-B181.2, "Polyvinylchloride (PVC) and Chlorinated Polyvinylchloride (CPVC) Drain, Waste, and Vent Pipe and Pipe Fittings."
4) Requirements for combustible piping in relation to fire safety shall conform to Sentences 3.1.5.19.(1) and 9.10.9.6.(3) to (11), and Articles 3.1.9.5. and 9.10.9.7. of Division B of the NBC.
5) Where noncombustible piping pierces a fire separation or a fire stop, the requirements of fire stopping of Subsection 3.1.9., Sentence 9.10.9.6.(1) and Article 9.10.16.4. of Division B of the NBC shall apply.

### 2.2.5.11. Polyethylene/Aluminum/Polyethylene Composite Pipe and Fittings

1) $\mathrm{PE} / \mathrm{AL} / \mathrm{PE}$ composite pipe and fittings shall conform to CSA B137.9, "Polyethylene/Aluminum/Polyethylene (PE-AL-PE) Composite Pressure-Pipe Systems." (See Note A-2.2.5.11.(1).)
2) Except as provided in Sentences (3) and (4), PE/AL/PE pipe and fittings shall not be used in hot water systems.
3) $\mathrm{PE} / \mathrm{AL} / \mathrm{PE}$ pipe with a pressure rating of 690 kPa or greater at $82^{\circ} \mathrm{C}$ shall be permitted for hot water systems.
4) $\mathrm{PE} / \mathrm{AL} / \mathrm{PE}$ pipe with a pressure rating of 690 kPa or greater at $82^{\circ} \mathrm{C}$ shall be used with fittings that conform to CSA B137.10, "Crosslinked Polyethylene/Aluminum/Crosslinked Polyethylene (PEX-AL-PEX) Composite Pressure-Pipe Systems," in hot water systems.

### 2.2.5.12. Crosslinked Polyethylene/Aluminum/Crosslinked Polyethylene Composite Pressure Pipe and Fittings

1) PEX/AL/PEX composite pipe and fittings used in hot and cold potable water systems shall conform to CSA B137.10, "Crosslinked Polyethylene/Aluminum/Crosslinked Polyethylene (PEX-AL-PEX) Composite Pressure-Pipe Systems." (See Note A-2.2.5.12.(1).)

### 2.2.5.13. Polypropylene Pipe and Fittings

1) Polypropylene pipe and fittings used for hot and cold potable water systems shall conform to CSA B137.11, "Polypropylene (PP-R) Pipe and Fittings for Pressure Applications." (See Note A-2.2.5.13.(1).)

### 2.2.6. Ferrous Pipe and Fittings

(For a summary of pipe applications, see Note A-2.2.5., 2.2.6. and 2.2.7.)

### 2.2.6.1. Cast-Iron Drainage and Vent Pipe and Fittings

1) Drainage piping, vent piping and fittings made of cast iron shall conform to CSA B70, "Cast Iron Soil Pipe, Fittings, and Means of Joining."
2) Cast-iron soil pipe and fittings shall not be used in a water system.

### 2.2.6.2. Maintenance Holes and Catch Basins

1) Cast-iron frames and covers for maintenance holes and catch basins shall conform to CSA B70.1, "Frames and Covers for Maintenance Holes and Catchbasins."

### 2.2.6.3. Threaded Cast-Iron Drainage Fittings

1) Threaded cast-iron drainage fittings shall conform to ASME B16.12, "Cast Iron Threaded Drainage Fittings."
2) Threaded cast-iron drainage fittings shall not be used in a water system.

### 2.2.6.4. Cast-Iron Water Pipes

1) Cast-iron water pipes shall conform to ANSI/AWWA C151/A21.51, "Ductile-Iron Pipe, Centrifugally Cast."
2) Cement mortar lining for cast-iron water pipes shall conform to ANSI/AWWA C104/A21.4, "Cement-Mortar Lining for Ductile-Iron Pipe and Fittings."
3) Cast-iron fittings for cast-iron or ductile-iron water pipes shall conform to ANSI/AWWA C110/A21.10, "Ductile-Iron and Gray-Iron Fittings."
4) Rubber gasket joints for cast-iron and ductile-iron pressure pipe for water shall conform to ANSI/AWWA C111/A21.11, "Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings."

### 2.2.6.5. Screwed Cast-Iron Water Fittings

1) Screwed cast-iron water fittings shall conform to ASME B16.4, "Gray Iron Threaded Fittings: Classes 125 and 250."
2) Screwed cast-iron water fittings used in a water system shall be cement-mortar lined or galvanized.
3) Screwed cast-iron water fittings shall not be used in a drainage system.

### 2.2.6.6. Screwed Malleable Iron Water Fittings

1) Screwed malleable iron water fittings shall conform to ASME B16.3, "Malleable Iron Threaded Fittings: Classes 150 and 300."
2) Screwed malleable iron water fittings used in a water system shall be cement-mortar lined or galvanized.
3) Screwed malleable iron water fittings shall not be used in a drainage system.

### 2.2.6.7. Steel Pipe

1) Except as provided in Sentences (2) and (3), welded and seamless steel pipe shall not be used in a plumbing system.
2) Galvanized steel pipe is permitted to be used in a drainage system or a venting system above ground inside a building.
3) Galvanized steel pipe and fittings shall not be used in a water distribution system except
a) in buildings of industrial occupancy as described in the NBC, or
b) for the repair of existing galvanized steel piping systems. (See Note A-2.2.6.7.(3).)
4) Galvanized steel pipe and fittings shall conform to ASTM A 53/A 53M, "Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless."

### 2.2.6.8. Corrugated Steel Pipe and Couplings

1) Corrugated steel pipe and couplings shall conform to CSA G401, "Corrugated Steel Pipe Products."
2) Corrugated steel pipe shall only be used underground outside a building in a storm drainage system.
3) Couplings for corrugated steel pipe shall be constructed so that when installed they shall
a) maintain the pipe alignment,
b) resist the separation of adjoining lengths of pipe,
c) prevent root penetration, and
d) prevent the infiltration of surrounding material.

### 2.2.6.9. Sheet Metal Leaders

1) A sheet metal leader shall not be used except above ground outside a building.

### 2.2.6.10. Stainless Steel Pipe

1) Stainless steel pipe shall conform to
a) ASME B36.19M, "Stainless Steel Pipe," and
b) ASTM A 312/A 312M, "Seamless, Welded, and Heavily Cold Worked Stainless Steel Pipes."
2) Only grade $304 / 304 \mathrm{~L}$ or $316 / 316 \mathrm{~L}$ stainless steel pipe shall be used.

### 2.2.6.11. Stainless Steel Butt Weld Pipe Fittings

1) Stainless steel butt weld pipe fittings shall conform to
a) ASME B16.9, "Factory Made Wrought Buttwelding Fittings," and
b) ASTM A 403/A 403M, "Wrought Austenitic Stainless Steel Piping Fittings."
2) Stainless steel butt weld pipe fittings shall be made of a material that matches the grade of the pipe material used.

### 2.2.6.12. Stainless Steel Pipe Flanges

1) Stainless steel pipe flanges shall conform to ASME B16.5, "Pipe Flanges and Flanged Fittings: NPS ½ Through NPS 24 Metric/Inch Standard," and
a) ASTM A 182/A 182M, "Forged or Rolled Alloy and Stainless Steel Pipe Flanges, Forged Fittings, and Valves and Parts for High-Temperature Service," or
b) AWWA C228, "Stainless-Steel Pipe Flanges for Water Service - Sizes 2 in. through 72 in . ( 50 mm through 1,800 mm)."
2) Stainless steel pipe flanges shall be made of a material that matches the grade of the pipe material used.

### 2.2.6.13. Stainless Steel Threaded Fittings

1) Stainless steel threaded fittings shall be schedule 40 s or greater conforming to
a) ASTM A 182/A 182M, "Forged or Rolled Alloy and Stainless Steel Pipe Flanges, Forged Fittings, and Valves and Parts for High-Temperature Service," or
b) ASTM A 351/A 351M, "Castings, Austenitic, for Pressure-Containing Parts."
2) Stainless steel threaded fittings shall be made of a material that matches the grade of the pipe material used.

### 2.2.6.14. Stainless Steel Tube

1) Stainless steel tube shall conform to
a) ASME B16.9, "Factory Made Wrought Buttwelding Fittings," and
b) ASTM A 269, "Seamless and Welded Austenitic Stainless Steel Tubing for General Service."
2) Only grade $304 / 304 \mathrm{~L}$ or $316 / 316 \mathrm{~L}$ stainless steel tube shall be used.

### 2.2.6.15. Stainless Steel Pipe and Tube

1) The use of stainless steel pipe and tube shall conform to Table 2.2.6.15.

Table 2.2.6.15.
Permitted Uses of Stainless Steel Pipe and Tube
Forming Part of Sentence 2.2.6.15.(1)

| Stainless Steel Pipe or Tube | Plumbing Purposes |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Water Distribution System |  | Building Sewer | Drainage System |  | Venting System |  |
|  | Underground | Aboveground |  | Underground | Aboveground | Underground | Aboveground |
| Stainless steel pipe | P | P | P | P | P | P | P |
| Stainless steel tube | P | P | N | N | N | N | N |
| $\mathrm{P}=$ Permitted $\mathrm{N}=$ Not Permitted |  |  |  |  |  |  |  |

### 2.2.7. Non-Ferrous Pipe and Fittings

(For a summary of pipe applications, see Note A-2.2.5., 2.2.6. and 2.2.7.)

### 2.2.7.1. Copper and Brass Pipe

1) Copper pipe shall conform to ASTM B 42 , "Seamless Copper Pipe, Standard Sizes."
2) Brass pipe shall conform to ASTM B 43 , "Seamless Red Brass Pipe, Standard Sizes."

### 2.2.7.2. Brass or Bronze Pipe Flanges and Flanged Fittings

1) Brass or bronze pipe flanges and flanged fittings shall conform to ASME B16.24, "Cast Copper Alloy Pipe Flanges and Flanged Fittings: Classes 150, 300, 600, 900, 1500 , and 2500."

### 2.2.7.3. Brass or Bronze Threaded Water Fittings

1) Brass or bronze threaded water fittings shall conform to ASME B16.15, "Cast Copper Alloy Threaded Fittings: Classes 125 and 250."
2) Brass or bronze threaded water fittings shall not be used in a drainage system.

### 2.2.7.4. Copper Tube

1) Copper tube shall conform to
a) ASTM B 88, "Seamless Copper Water Tube," or
b) ASTM B 306, "Copper Drainage Tube (DWV)."
2) Except as provided in Sentence (3), the use of copper tube shall conform to Table 2.2.7.4.
3) Copper tube shall not be used for the fixture drain or the portion of the vent pipe below the flood level rim of manually flushing or waterless urinals.

Table 2.2.7.4.
Permitted Use of Copper Tube and Pipe
Forming Part of Sentence 2.2.7.4.(2)

| Type of Copper Tube or Pipe | Plumbing Purposes |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Water Service Pipe | Water Distribution System |  | Building Sewer | Drainage System |  | Venting System |  |
|  |  | Underground | Aboveground |  | Underground | Aboveground | Underground | Aboveground |
| K \& L hard temper | N | N | P | P | P | P | $P$ | P |
| K \& L soft temper | P | P | P | N | N | N | N | N |
| M hard temper | N | N | P | N | N | P | N | P |
| M soft temper | N | N | N | N | N | N | N | N |
| DWV | N | N | N | N | N | P | N | P |
| $P=$ Permitted $N=$ Not Permitted |  |  |  |  |  |  |  |  |

### 2.2.7.5. Solder-Joint Drainage Fittings

1) Solder-joint fittings for drainage systems shall conform to
a) ASME B16.23, "Cast Copper Alloy Solder Joint Drainage Fittings: DWV," or
b) ASME B16.29, "Wrought Copper and Wrought Copper Alloy Solder-Joint Drainage Fittings - DWV."
2) Solder-joint fittings for drainage systems shall not be used in a water system.

### 2.2.7.6. Solder-Joint Water Fittings

1) Except as provided in Sentence (2), solder-joint fittings for water systems shall conform to
a) ASME B16.18, "Cast Copper Alloy Solder-Joint Pressure Fittings," or
b) ASME B16.22, "Wrought Copper and Copper Alloy Solder Joint Pressure Fittings."
2) Solder-joint fittings for water systems not made by casting or the wrought process shall conform to the applicable requirements of ASME B16.18, "Cast Copper Alloy Solder-Joint Pressure Fittings."

### 2.2.7.7. Flared-Joint Fittings for Copper Water Systems

1) Flared-joint fittings for copper tube water systems shall conform to ASME B16.26, "Cast Copper Alloy Fittings for Flared Copper Tubes."
2) Flared-joint fittings for copper tube water systems not made by casting shall conform to the applicable requirements of ASME B16.26, "Cast Copper Alloy Fittings for Flared Copper Tubes."

### 2.2.7.8. Lead Waste Pipe and Fittings

1) Lead waste pipe and fittings shall not be used in a water system or as a building sewer.
2) When there is a change in size of a lead closet bend, the change shall be in the vertical section of the bend or made in a manner that prevents the retention of liquid in the bend.

### 2.2.8. Corrosion-Resistant Materials

### 2.2.8.1. Pipes and Fittings

1) Pipes and fittings to be used for drainage and venting of acid and corrosive wastes shall conform to
a) ASTM A 518/A 518M, "Corrosion-Resistant High-Silicon Iron Castings,"
b) ASTM C 1053, "Borosilicate Glass Pipe and Fittings for Drain, Waste, and Vent (DWV) Applications," or
c) CAN/CSA-B181.3, "Polyolefin and Polyvinylidene Fluoride (PVDF) Laboratory Drainage Systems."

### 2.2.9. Jointing Materials

### 2.2.9.1. Cement Mortar

1) Cement mortar shall not be used for jointing.

### 2.2.9.2. Solders and Fluxes

1) Solders for solder joint fittings shall conform to ASTM B 32, "Solder Metal."
2) Solders and fluxes having a lead content in excess of $0.2 \%$ shall not be used in a potable water system.
3) Fluxes for soldered joints shall conform to ASTM B 813, "Liquid and Paste Fluxes for Soldering of Copper and Copper Alloy Tube."
4) Brazing alloys shall conform to ANSI/AWS A5.8M/A5.8, "Filler Metals for Brazing and Braze Welding," BCuP range.

### 2.2.10. Miscellaneous Materials

### 2.2.10.1. Brass Floor Flanges

1) Brass floor flanges shall conform to CSA B158.1, "Cast Brass Solder Joint Drainage, Waste and Vent Fittings."

### 2.2.10.2. Screws, Bolts, Nuts and Washers

1) Every screw, bolt, nut and washer shall be of corrosion-resistant materials when used
a) to connect a water closet to a floor flange,
b) to anchor the floor flange to the floor, or
c) to anchor the water closet to the floor.

### 2.2.10.3. Cleanout Fittings

1) Every plug, cap, nut or bolt that is intended to be removable from a ferrous fitting shall be of a non-ferrous material.
2) A cleanout fitting that, as a result of normal maintenance operations, cannot withstand the physical stresses of removal and reinstallation or cannot ensure a gas-tight seal shall not be installed.

### 2.2.10.4. Mechanical Couplings

1) Groove- and shoulder-type mechanical couplings for pressure applications shall conform to CSA B242, "Groove- and Shoulder-Type Mechanical Pipe Couplings."
2) Mechanical couplings for non-pressure applications shall conform to CSA B602, "Mechanical Couplings for Drain, Waste, and Vent Pipe and Sewer Pipe."

### 2.2.10.5. Saddle Hubs

1) A saddle hub or fitting shall not be installed in drainage, venting or water systems. (See Note A-2.2.10.5.(1).)

### 2.2.10.6. Supply and Waste Fittings

1) Supply fittings shall conform to
a) ASME A112.18.1/CSA B125.1, "Plumbing Supply Fittings," or
b) CSA B125.3, "Plumbing Fittings."
2) Except for lavatories in health care facilities, emergency eye washes, and emergency showers, supply fittings and individual shower heads shall have an integral means of limiting the maximum water flow rate to that specified in Table 2.2.10.6. (See Note A-2.2.10.6.(2).)

Table 2.2.10.6.
Water Flow Rates from Supply Fittings
Forming Part of Sentence 2.2.10.6.(2)

| Supply Fittings | Maximum Water Flow Rate, L/min |
| :--- | :---: |
| Lavatory supply fittings |  |
| private | 5.7 |
| public | 1.9 |
| Kitchen supply fittings (except those in industrial, commercial or institutional kitchens) | 8.3 |
| Shower heads | 7.6 |

3) An automatic compensating valve serving an individual shower head addressed in Sentence (1) shall have a water flow rate equal to or less than the shower head it serves. (See Note A-2.2.10.6.(3).)
4) Where multiple shower heads installed in a public showering facility are served by one temperature control, each shower head shall be equipped with a device capable of automatically shutting off the flow of water when the shower head is not in use. (See Note A-2.2.10.6.(4) and (5).)
5) Each lavatory in a public washroom shall be equipped with a device capable of automatically shutting off the flow of water when the lavatory is not in use. (See Note A-2.2.10.6.(4) and (5).)
6) Waste fittings shall conform to ASME A112.18.2/CSA B125.2, "Plumbing Waste Fittings."

### 2.2.10.7. Water Temperature Control

(See Note A-2.2.10.7.)

1) Except as provided in Sentence (2), valves supplying fixed-location shower heads shall be individual pressure-balanced or thermostatic-mixing valves conforming to ASME A112.18.1/CSA B125.1, "Plumbing Supply Fittings."
2) Individual pressure-balanced or thermostatic-mixing valves shall not be required for shower heads having a single tempered water supply that is controlled by an automatic compensating valve conforming to CSA B125.3, "Plumbing Fittings."
3) Mixing valves that supply shower heads shall be of the pressure-balanced, thermostatic, or combination pressure-balanced/thermostatic type capable of
a) maintaining a water outlet temperature that does not exceed $49^{\circ} \mathrm{C}$, and
b) limiting thermal shock.
4) The temperature of water discharging into a bathtub shall not exceed $49^{\circ} \mathrm{C}$.

### 2.2.10.8. Direct Flush Valves

1) Direct flush valves shall
a) open fully and close positively under service pressure,
b) complete their cycle of operation automatically,
c) be provided with a means of regulating the volume of water that they discharge, and
d) be provided with a vacuum breaker unless the fixture is designed so that back-siphonage cannot occur.

### 2.2.10.9. Drinking Fountain Bubblers

1) The orifice of drinking fountain bubblers shall
a) be of the shielded type, and
b) direct the water upward at an angle of approximately $45^{\circ}$.
2) Drinking fountain bubblers shall include a means of regulating the flow to the orifice.
3) Bubblers shall be installed only on drinking fountains. (See Note A-2.2.10.9.(3).)

### 2.2.10.10. Back-Siphonage Preventers and Backflow Preventers

1) Except as provided in Sentence (2), back-siphonage preventers and backflow preventers shall conform to
a) CSA B64.0, "Definitions, General Requirements, and Test Methods for Vacuum Breakers and Backflow Preventers,"
b) CSA B64.1.1, "Atmospheric Vacuum Breakers (AVB),"
c) CSA B64.1.2, "Pressure Vacuum Breakers (PVB),"
d) CSA B64.1.3, "Spill-Resistant Pressure Vacuum Breakers (SRPVB),"
e) CSA B64.2, "Hose Connection Vacuum Breakers (HCVB),"
f) CSA B64.2.1, "Hose Connection Vacuum Breakers (HCVB) with Manual Draining Feature,"
g) CSA B64.2.2, "Hose Connection Vacuum Breakers (HCVB) with Automatic Draining Feature,"
h) CSA B64.3, "Dual Check Valve Backflow Preventers with Atmospheric Port (DCAP),"
i) CSA B64.4, "Reduced Pressure Principle (RP) Backflow Preventers,"
j) CSA B64.5, "Double Check Valve (DCVA) Backflow Preventers,"
k) CSA B64.6, "Dual Check Valve (DuC) Backflow Preventers,"
2) CSA B64.7, "Laboratory Faucet Vacuum Breakers (LFVB)," or
m) CSA B64.8, "Dual Check Valve Backflow Preventers with Intermediate Vent (DuCV)."
3) Back-siphonage preventers for tank-type water closets (anti-siphon fill valves) shall conform to CSA B125.3, "Plumbing Fittings."

### 2.2.10.11. Relief Valves

1) Temperature-relief, pressure-relief, combined temperature- and pressure-relief, and vacuum-relief valves shall conform to ANSI Z21.22/CSA 4.4, "Relief Valves for Hot Water Supply Systems."

### 2.2.10.12. Reducing Valves

1) Direct-acting water-pressure-reducing valves for domestic water supply systems shall conform to CAN/CSA-B356, "Water Pressure Reducing Valves for Domestic Water Supply Systems."

### 2.2.10.13. Solar Domestic Hot Water

1) Equipment for solar heating of potable water shall conform to CAN/CSA-F379 SERIES, "Packaged Solar Domestic Hot Water Systems (Liquid-to-Liquid Heat Transfer)."

### 2.2.10.14. Vent Pipe Flashing

1) Flashing fabricated on-site for vent pipes shall be fabricated from
a) copper sheet not less than 0.33 mm thick,
b) aluminum sheet not less than 0.48 mm thick,
c) alloyed zinc sheet not less than 0.35 mm thick,
d) lead sheet not less than 1.73 mm thick,
e) galvanized steel sheet not less than 0.33 mm thick, or
f) polychloroprene (neoprene) not less than 2.89 mm thick.
2) Prefabricated flashing for vent pipes shall conform to CSA B272, "Prefabricated Self-Sealing Roof Vent Flashings." (See Article 2.5.6.5. for location of vent pipe terminals.)

### 2.2.10.15. Water Hammer Arresters

1) Water hammer arresters shall conform to ANSI/ASSE 1010, "Water Hammer Arresters."

### 2.2.10.16. Air Admittance Valves

1) Air admittance valves shall conform to ASSE 1051, "Individual and Branch Type Air Admittance Valves (AAVs) for Sanitary Drainage Systems." (See Note A-2.2.10.16.(1).)

### 2.2.10.17. Water Treatment Systems

1) Point-of-use devices, including their disposable parts, used in potable water treatment systems shall conform to CAN/CSA-B483.1, "Drinking Water Treatment Systems."

## Section 2.3. Piping

### 2.3.1. Application

### 2.3.1.1. General

1) This Section applies to the construction and use of joints and connections, and the arrangement, protection, support and testing of piping.

### 2.3.2. Construction and Use of Joints

### 2.3.2.1. Caulked Lead Drainage Joints

1) Caulked lead drainage joints shall not be used except for cast-iron pipe in a drainage system or venting system, or between such pipe and
a) other ferrous pipe,
b) brass and copper pipe,
c) a caulking ferrule, or
d) a trap standard.
2) Every caulked lead drainage joint shall be firmly packed with oakum and tightly caulked with lead to a depth of not less than 25 mm .
3) No paint, varnish or other coating shall be applied on the lead until after the joint has been tested.
4) A length of hub and spigot pipe and pipe fittings in a drainage system shall be installed with the hub at the upstream end.

### 2.3.2.2. Wiped Joints

1) Wiped joints shall not be used except for sheet lead or lead pipe, or between such pipe and copper pipe or a ferrule.
2) Wiped joints in straight pipe shall
a) be made of solder,
b) have an exposed surface on each side of the joint at least 19 mm wide, and
c) be not less than 10 mm thick at the thickest part.
3) Wiped flanged joints shall be reinforced with a lead flange that is not less than 19 mm wide.

### 2.3.2.3. Screwed Joints

1) In making a screwed joint, the ends of the pipe shall be reamed or filed out to the size of the bore and all chips and cuttings shall be removed.
2) No pipe-joint cement or paint shall be applied to the internal threads.

### 2.3.2.4. Soldered Joints

1) Soldered joints shall be made in accordance with ASTM B 828, "Making Capillary Joints by Soldering of Copper and Copper Alloy Tube and Fittings."

### 2.3.2.5. Flared Joints

1) In making a flared joint, the pipe shall be expanded with a proper flaring tool.
2) Flared joints shall not be used for hard (drawn) copper tube.

### 2.3.2.6. Mechanical Joints

1) Mechanical joints shall be made with compounded elastomeric rings that are held in compression by
a) stainless steel or cast-iron clamps, or
b) groove and shoulder type mechanical couplings.
(See Note A-2.3.2.6.(1).)

### 2.3.2.7. Cold-Caulked Joints

1) Cold-caulked joints shall not be used except for bell and spigot pipe in a water system, a drainage system or a venting system.
2) Caulking compound used in cold-caulked joints shall be applied according to the manufacturer's directions.
3) Cold-caulked joints in a drainage system shall be firmly packed with oakum and tightly caulked with cold caulking compound to a depth of not less than 25 mm .

### 2.3.2.8. Stainless Steel Welded Joints

1) Stainless steel welded joints shall conform to ASME B31.9, "Building Services Piping."
2) Butt weld pipe fittings shall be at least as thick as the wall of the pipe used.

### 2.3.3. Joints and Connections

### 2.3.3.1. Drilled and Tapped Joints

1) Drilled and tapped joints shall not be made in a soil-or-waste pipe or vent pipe and fittings unless suitable provision has been made for drilling and tapping.

### 2.3.3.2. Extracted Tees

1) Tees may be extracted from the wall thickness of Types $K$ and $L$ copper tube used in a water distribution system provided that
a) a tool specifically designed for the purpose is used,
b) the branch is at least one size smaller than the tube in which the tee is formed,
c) the end of the branch incorporates a means to prevent it from penetrating into the run and thereby obstructing flow, and
d) the joint at the tee is brazed with a filler metal having a melting point not below $540^{\circ} \mathrm{C}$.

### 2.3.3.3. Prohibition of Welding of Pipes and Fittings

1) Cast-iron soil pipe and fittings shall not be welded.
2) Galvanized steel pipe and fittings shall not be welded.

### 2.3.3.4. Unions and Slip Joints

(See Note A-2.2.3.1.(1) and (3).)

1) Running thread and packing nut connections and unions with a gasket seal shall not be used downstream of a trap weir in a drainage system or in a venting system.
2) Slip joints shall not be used
a) in a venting system, or
b) in a drainage system, except to connect a fixture trap to a fixture drain in an accessible location.

### 2.3.3.5. Increaser or Reducer

1) Connections between 2 pipes of different sizes shall be made with an increaser or a reducer fitting installed so that it permits the system to be completely drained.

### 2.3.3.6. Dissimilar Materials

1) Adaptors, connectors or mechanical joints used to join dissimilar materials shall be designed to accommodate the required transition.

### 2.3.3.7. Connection of Roof Drain to Leader

1) Roof drains shall be securely connected to a leader and provision shall be made for expansion.

### 2.3.3.8. Connection of Floor Outlet Fixtures

1) Pedestal urinals, floor-mounted water closets and S-trap standards shall be connected to a fixture drain by a floor flange or other means of connection, except that a cast-iron trap standard may be caulked to a cast-iron pipe.
2) Except as provided in Sentence (3), floor flanges shall be brass.
3) Where cast-iron or plastic pipe is used, a floor flange of the same material is permitted to be used.
4) Floor flanges and fixtures shall be securely set on a firm base and fastened to the floor or trap flange of the fixture.
5) Joints in a floor flange or between a fixture and the drainage system shall be sealed with a resilient watertight and gas-tight seal.
6) Where a lead water-closet stub is used, the length of the stub below the floor flange shall be not less than 75 mm .

### 2.3.3.9. Expansion and Contraction

(See Note A-2.3.3.9.)

1) The design and installation of every piping system shall include means to accommodate its expansion and contraction caused by temperature changes, movement of the soil, building shrinkage or structural settlement. (See Note A-2.3.3.9.(1).)

### 2.3.3.10. Copper Tube

1) Types $M$ and DWV copper tube shall not be bent.

### 2.3.3.11. Indirect Connections

1) Where a fixture or device is indirectly connected, the connections shall be made by terminating the fixture drain above the flood level rim of a directly connected fixture to form an air break.
2) The size of the air break shall at least equal the size of the fixture drain, branch or pipe that terminates above the directly connected fixture, and it shall be not less than 25 mm . (See Note A-2.3.3.11.(2).)

### 2.3.3.12. Copper Joints Used Underground

1) Except as provided in Sentence (2), joints in copper tubes installed underground shall be made with either flared or compression fittings, or be brazed using a brazing alloy within the American Welding Society's AWS-BCuP range.
2) Compression fittings shall not be used underground under a building.

### 2.3.4. Support of Piping

### 2.3.4.1. Capability of Support

1) Piping shall be provided with support that is capable of keeping the pipe in alignment and bearing the weight of the pipe and its contents.
2) Floor-mounted and wall-mounted water-closet bowls shall be securely attached to the floor or wall by means of a flange and shall be stable.
3) Wall-mounted fixtures shall be supported so that no strain is transmitted to the piping.

### 2.3.4.2. Independence of Support

1) Piping, fixtures, tanks or devices shall be supported independently of each other.

### 2.3.4.3. Insulation of Support

1) Where a hanger or support for copper tube or brass or copper pipe is of a material other than brass or copper, it shall be suitably separated and electrically insulated from the pipe or tube.
2) Where a hanger or support for stainless steel pipe or tube is of a material other than stainless steel, it shall be suitably separated and electrically insulated from the pipe or tube.

### 2.3.4.4. Support for Vertical Piping

1) Except as provided in Sentence (2), vertical piping shall be supported at its base and at the floor level of alternate storeys by rests, each of which can bear the weight of pipe that is between it and the rest above it.
2) The maximum spacing of supports shall be 7.5 m .

### 2.3.4.5. Support for Horizontal Piping

1) Nominally horizontal piping that is inside a building shall be braced to prevent swaying and buckling and to control the effects of thrust.
2) Nominally horizontal piping shall be supported as stated in Table 2.3.4.5.
3) Where PVC, CPVC or ABS plastic pipe is installed
a) the pipe shall be aligned without added strain on the piping,
b) the pipe shall not be bent or pulled into position after being welded, and
c) hangers shall not compress, cut or abrade the pipe.
4) Where PEX, PP-R, PE/AL/PE or PEX/AL/PEX plastic pipe is installed, hangers shall not compress, cut or abrade the pipe.

Table 2.3.4.5.
Support for Nominally Horizontal Piping
Forming Part of Sentence 2.3.4.5.(2)

| Piping Material | Maximum Horizontal Spacing of Supports, m | Additional Support Conditions |
| :---: | :---: | :---: |
| Galvanized iron or steel pipe <br> - diameter $\geq 6$ inches <br> - diameter < 6 inches | $\begin{gathered} 3.75 \\ 2.5 \end{gathered}$ | None |
| Stainless steel pipe <br> - diameter $\geq 1$ inch <br> - diameter < 1 inch | $\begin{aligned} & 3.0 \\ & 2.5 \end{aligned}$ | None |
| Stainless steel tube <br> - diameter $\geq 1$ inch <br> - diameter < 1 inch | $\begin{aligned} & 3.0 \\ & 2.5 \end{aligned}$ | None |
| Lead pipe | Throughout length of pipe | None |
| Cast-iron pipe | 3 | At or adjacent to each hub or joint |
| Cast-iron pipe with mechanical joints that is $\leq 300 \mathrm{~mm}$ long between adjacent fittings | 1 | None |
| ABS or PVC plastic pipe | 1.2 | At the end of branches or fixture drains and at changes in direction and elevation |
| ABS or PVC plastic trap arm or fixture drain pipe $>1 \mathrm{~m}$ long | n/a | As close as possible to the trap |
| CPVC pipe | 1 | None |
| Copper tube or copper and brass pipe, hard temper, diameter > 1 inch | 3 | None |
| Copper tube or copper and brass pipe, hard temper, diameter $\leq 1$ inch | 2.5 | None |
| Copper tube, soft temper | 2.5 | None |
| PE/AL/PE composite pipe | 1 | None |
| PEX/AL/PEX composite pipe | 1 | None |
| PEX plastic pipe | 0.8 | None |
| PP-R plastic pipe | 1 | At the end of branches and at changes in direction and elevation |

5) Where hangers are used to support nominally horizontal piping, the hangers shall be
a) supported by metal rods of not less than
i) 6 mm diam to support piping 2 inches or less in size,
ii) 8 mm diam to support piping 4 inches or less in size, and
iii) 13 mm diam to support piping over 4 inches in size, or
b) solid or perforated metal straps of not less than
i) 0.6 mm nominal thickness and 12 mm wide to support piping 2 inches or less in size, and
ii) 0.8 mm nominal thickness and 18 mm wide to support piping 4 inches or less in size.
6) Where a hanger is attached to concrete or masonry, it shall be fastened by metal or expansion-type plugs that are inserted or built into the concrete or masonry.

### 2.3.4.6. Support for Underground Horizontal Piping

1) Except as provided in Sentence (2), nominally horizontal piping that is underground shall be supported on a base that is firm and continuous under the whole of the pipe. (See Note A-2.3.4.6.(1).)
2) Nominally horizontal piping installed underground that is not supported as described in Sentence (1) may be installed using hangers fixed to a foundation or structural slab provided that the hangers are capable of
a) keeping the pipe in alignment, and
b) supporting the weight of
i) the pipe,
ii) its contents, and
iii) the fill over the pipe.

### 2.3.4.7. Support for Vent Pipe above a Roof

1) Where a vent pipe that may be subject to misalignment terminates above the surface of a roof, it shall be supported or braced. (See Article 2.5.6.5. for location of vent pipe terminals.)

### 2.3.5. Protection of Piping

### 2.3.5.1. Protection of Piping

1) Underground piping shall be protected
a) in the absence of the pipe manufacturer's instructions for backfill, by backfill that is (see Note A-2.3.5.1.(1)(a))
i) placed and compacted to a height of 300 mm over the top of the pipe, and
ii) free of stones, boulders, cinders and frozen earth or other material capable of damaging the piping, or
b) by concrete that is at least 75 mm thick and at least 200 mm wider than the pipe.

### 2.3.5.2. Isolation from Loads

1) Where piping passes through or under a wall, it shall be installed so that the wall does not bear on the pipe.

### 2.3.5.3. Protection Against Freezing

(See Note A-2.3.5.3.)

1) Where piping may be exposed to freezing conditions, it shall be protected from the effects of freezing.

### 2.3.5.4. Protection from Mechanical Damage

1) Plumbing, piping and equipment exposed to mechanical damage shall be protected.

### 2.3.5.5. Protection from Condensation

(See Note A-2.3.5.3.)

1) Piping used as an internal leader, which may be subject to condensation, shall be installed in a manner that limits the risk of damage to the building due to condensation.

### 2.3.6. Testing of Drainage or Venting Systems

### 2.3.6.1. Tests and Inspection of Drainage or Venting Systems

1) Except in the case of an external leader, after a section of a drainage system or a venting system has been roughed in, and before any fixture is installed or piping is covered, a water pressure test or an air pressure test shall be conducted.
2) After every fixture is installed and before any part of the drainage system or venting system is placed in operation, a final test shall be carried out when requested.
3) Where a prefabricated system is assembled off the building site in such a manner that it cannot be inspected and tested on site, off-site inspections and tests shall be conducted.
4) Where a prefabricated system is installed as part of a drainage system or venting system, all other plumbing work shall be tested and inspected and a final test shall be carried out on the complete system when requested.
5) When requested, a ball test shall be made to any pipe in a drainage system.

### 2.3.6.2. Tests of Pipes in Drainage Systems

1) Pipes in a drainage system, except an external leader or fixture outlet pipe, shall be capable of withstanding without leakage a water pressure test, air pressure test and final test.
2) Pipes in a drainage system shall be capable of meeting a ball test.

### 2.3.6.3. Tests of Venting Systems

1) Venting systems shall be capable of withstanding without leakage a water pressure test, air pressure test and final test.

### 2.3.6.4. Water Pressure Tests

1) A water pressure test shall consist in applying a water column of at least 3 m to all joints.
2) In making a water pressure test,
a) every opening except the highest shall be tightly closed with a testing plug or a screw cap, and
b) the system or the section shall be kept filled with water for 15 min .

### 2.3.6.5. Air Pressure Tests

1) Air pressure tests shall be conducted in accordance with the manufacturer's instructions for each piping material, and
a) air shall be forced into the system until a pressure of 35 kPa is created, and
b) this pressure shall be maintained for at least 15 min without a drop in pressure.

### 2.3.6.6. <br> Final Tests

1) Where a final test is made,
a) every trap shall be filled with water,
b) the bottom of the system being tested shall terminate at a building trap, test plug or cap,
c) except as provided in Sentence (2), smoke from smoke-generating machines shall be forced into the system,
d) when the smoke appears from all roof terminals they shall be closed, and
e) a pressure equivalent to a 25 mm water column shall be maintained for 15 min without the addition of more smoke.
2) The smoke referred to in Clauses (1)(c) and (d) is permitted to be omitted, provided the roof terminals are closed and the system is subjected to an air pressure equivalent to a 25 mm water column maintained for 15 min without the addition of more air.

### 2.3.6.7. <br> Ball Tests

1) Where a ball test is made, a hard ball dense enough not to float shall be rolled through the pipe.
2) The diameter of the ball shall be not less than
a) 50 mm where the size of the pipe is 3 inches or more, or
b) 25 mm where the size of the pipe is less than 3 inches.

### 2.3.7. Testing of Potable Water Systems

### 2.3.7.1. Application of Tests

1) After a section of a potable water system has been completed, and before it is placed in operation, a water pressure test shall be conducted, except that an air pressure test may be used in freezing conditions.
2) A pressure test may be applied to each section of the system or to the system as a whole.
3) Where a prefabricated system is assembled off the building site in such a manner that it cannot be inspected and tested on site, off-site inspections and pressure tests shall be conducted.
4) Where a prefabricated system is installed as part of a water system,
a) all other plumbing work shall be tested and inspected, and
b) the complete system shall be pressure tested when requested.

### 2.3.7.2. Pressure Tests of Potable Water Systems

1) Except as required in Sentence (2), potable water systems shall be able to withstand
a) without leaking, a water pressure that is at least equal to the maximum in-service pressure, or
b) an air pressure of not less than 700 kPa for at least 2 h without a drop in pressure.
2) If a manufacturer states that an air pressure test is not recommended, a water pressure test shall be performed. (See Note A-2.3.7.2.(2).)

### 2.3.7.3. Water Pressure Tests

1) Where a water pressure test is made, all air shall be expelled from the system before fixture control valves or faucets are closed.
2) Potable water shall be used to test a potable water system.

## Section 2.4. Drainage Systems

### 2.4.1. Application

### 2.4.1.1. General

1) This Section applies to sanitary drainage systems, storm drainage systems, combined building drains or combined building sewers.

### 2.4.2. Connections to Drainage Systems

### 2.4.2.1. Connections to Sanitary Drainage Systems

1) Fixtures shall be directly connected to a sanitary drainage system, except that
a) drinking fountains are permitted to be
i) indirectly connected to a sanitary drainage system, or
ii) connected to a storm drainage system provided that where the system is subject to backflow, a backwater valve is installed in the fountain waste pipe (see Note A-2.4.2.1.(1)(a)(ii) and (e)(vi)),
b) drainage pans on heating/cooling units are permitted to be connected to a storm drainage system, provided that where the system is subject to backflow, a backwater valve is installed,
c) a floor drain is permitted to be connected to a storm drainage system, provided it is located where it can receive only clear-water waste or storm water,
d) fixtures or appliances that discharge only clear-water waste are permitted to be connected to a storm drainage system or be drained onto a roof, and
e) the following devices shall be indirectly connected to a drainage system:
i) a device for the display, storage, preparation or processing of food or drink,
ii) a sterilizer,
iii) a device that uses water as a cooling or heating medium,
iv) a water operated device,
v) a water treatment device, or
vi) a drain or overflow from a water system or a heating system (see Note A-2.4.2.1.(1)(a)(ii) and (e)(vi)).
2) The connection of a soil-or-waste pipe to a nominally horizontal soil-or-waste pipe or to a nominally horizontal offset in a soil-or-waste stack shall be not less than 1.5 m measured horizontally from the bottom of a soil-or-waste stack or from the bottom of the upper vertical section of the soil-or-waste stack that
a) receives a discharge of 30 or more fixture units, or
b) receives a discharge from fixtures located on 2 or more storeys.
(See Note A-2.4.2.1.(2).)
3) No other fixture shall be connected to a lead bend or stub that serves a water closet.
4) Where a change in direction of more than $45^{\circ}$ occurs in a soil-or-waste pipe that serves more than one clothes washer, and in which pressure zones are created by detergent suds, no other soil-or-waste pipe shall be connected to it within a length less than
a) 40 times the size of the soil-or-waste pipe or 2.44 m maximum vertical, whichever is less, before changing direction, and
b) 10 times the size of the nominally horizontal soil-or-waste pipe after changing direction.
(See Note A-2.4.2.1.(4).)
5) Where a vent pipe is connected into the suds pressure zone referred to in Sentence (4), no other vent pipe shall be connected to that vent pipe within the height of the suds pressure zone. (See Note A-2.4.2.1.(4).)

### 2.4.2.2. Connection of Overflows from Rainwater Tanks

1) An overflow from a rainwater tank shall not be directly connected to a drainage system.

### 2.4.2.3. Direct Connections

1) Two or more fixture outlet pipes that serve outlets from a single fixture that is listed in Clause 2.4.2.1.(1)(e) are permitted to be directly connected to a branch that
a) has a size of not less than 1.25 inches, and
b) is terminated above the flood level rim of a directly connected fixture to form an air break.
2) Fixture drains from fixtures that are listed in Subclauses 2.4.2.1.(1)(e)(i) and (ii) are permitted to be directly connected to a pipe that
a) is terminated to form an air break above the flood level rim of a fixture that is directly connected to a sanitary drainage system, and
b) is extended through the roof when fixtures on 3 or more storeys are connected to it (see A-2.4.2.1.(1)(a)(ii) and (e)(vi)).
3) Fixture drains from fixtures that are listed in Subclauses 2.4.2.1.(1)(e)(iii) to (vi) are permitted to be directly connected to a pipe that
a) is terminated to form an air break above the flood level rim of a fixture that is directly connected to a storm drainage system, and
b) is extended through the roof when fixtures on 3 or more storeys are connected to it.

### 2.4.3. Location of Fixtures

### 2.4.3.1. Urinals

1) Urinals shall not be installed adjacent to wall and floor surfaces that are pervious to water. (See Article 3.7.2.6. of Division B of the NBC.)

### 2.4.3.2. Restricted Locations of Indirect Connections and Traps

1) Indirect connections or any trap that may overflow shall not be located in a crawl space or any other unfrequented area.

### 2.4.3.3. Equipment Restrictions Upstream of Grease Interceptors

1) Except as provided in Sentence (2), equipment discharging waste with organic solids shall not be located upstream of a grease interceptor. (See Note A-2.4.3.3.(1).)
2) An organic solids interceptor is permitted to be installed upstream of a grease interceptor.
2.4.3.4.

Fixtures Located in Chemical Storage Locations

1) A floor drain or other fixture located in an oil transformer vault, a high voltage room or any room where flammable, dangerous or toxic chemicals are stored or handled shall not be connected to a drainage system.

### 2.4.3.5. Macerating Toilet Systems

1) A macerating toilet system shall only be installed where no connection to a gravity sanitary drainage system is available.

### 2.4.3.6. Drains Serving Elevator Pits

1) Where a drain is provided in an elevator pit,
a) it shall be connected directly to a sump located outside the elevator pit, and
b) the drain pipe that connects the sump to the drainage system shall have a backwater valve.

### 2.4.4. Treatment of Sewage and Waste

### 2.4.4.1. Sewage Treatment

1) Where a fixture or equipment discharges sewage or waste that may damage or impair the sanitary drainage system or the functioning of a public or private sewage disposal system, provision shall be made for treatment of the sewage or waste before it is discharged to the sanitary drainage system.

### 2.4.4.2. Cooling of Hot Water or Sewage

1) Where a fixture discharges sewage or clear-water waste that is at a temperature above $75^{\circ} \mathrm{C}$, provision shall be made for cooling of the waste to $75^{\circ} \mathrm{C}$ or less before it is discharged to the drainage system.

### 2.4.4.3.

### 2.4.4.4. Neutralizing and Dilution Tanks

1) Where a fixture or equipment discharges corrosive or acid waste, it shall discharge into a neutralizing or dilution tank that is connected to the sanitary drainage system through
a) a trap, or
b) an indirect connection.
(See Note A-2.4.4.4.(1).)
2) Neutralizing and dilution tanks shall have a method for neutralizing the liquid.

### 2.4.5. Traps

### 2.4.5.1. Traps for Sanitary Drainage Systems

1) Except as provided in Sentences (2) to (5) and in Article 2.4.5.2., fixtures shall be protected by a separate trap.
2) One trap is permitted to protect
a) all the trays or compartments of a 2- or 3-compartment sink,
b) a 2-compartment laundry tray, or
c) 2 similar single compartment fixtures located in the same room.
(See Note A-2.4.5.1.(2).)
3) One trap is permitted to serve a group of floor drains or shower drains, a group of washing machines or a group of laboratory sinks if the fixtures
a) are in the same room, and
b) are not located where they can receive food or other organic matter. (See Note A-2.4.5.1.(3).)
4) An indirectly connected fixture that can discharge only clear-water waste other than a drinking fountain need not be protected by a trap. (See Clause 2.4.2.1.(1)(e) for indirect connections.)
5) An interceptor with an effective water seal of not less than 38 mm is permitted to serve as a trap. (See Note A-2.4.5.1.(5).)
6) Where a domestic dishwashing machine equipped with a drainage pump discharges through a direct connection into the fixture outlet pipe of an adjacent kitchen sink or disposal unit, the pump discharge line shall rise as high as possible to just under the counter and connect
a) on the inlet side of the sink trap by means of a Y fitting, or
b) to the disposal unit.

### 2.4.5.2. Traps for Storm Drainage Systems

1) Where a storm drainage system is connected to a combined building sewer or a public combined sewer, a trap shall be installed between any opening in the system and the drain or sewer, except that no trap is required if the opening is the upper end of a leader that terminates
a) at a roof that is used only for weather protection,
b) not less than 1 m above or not less than 3.5 m in any other direction from any air inlet, openable window or door, and
c) not less than 1.8 m from a property line.
(See Note A-2.4.5.2.(1).)
2) A floor drain that drains to a storm drainage system shall be protected by a trap that
a) is located between the floor drain and a leader, storm building drain or storm building sewer,
b) may serve all floor drains located in the same room, and
c) need not be protected by a vent pipe.
3) Where freezing conditions could cause storm drainage systems to freeze due to air circulation within the piping, a trap with a cleanout shall be installed in a heated location.

### 2.4.5.3. Connection of Subsoil Drainage Pipe to a Sanitary Drainage System

1) Where a subsoil drainage pipe is connected to a sanitary drainage system, the connection shall be made on the upstream side of a trap with a cleanout or a trapped sump. (See Note A-2.4.5.3.(1).)

### 2.4.5.4. Location and Cleanout for Building Traps

1) Where a building trap is installed, it shall
a) be provided with a cleanout fitting on the upstream side of and directly over the trap,
b) be located upstream of the building cleanout, and
c) be located
i) inside the building as close as practical to the place where the building drain leaves the building, or
ii) outside the building in a manhole.
(See Note A-2.4.5.4.(1).)

### 2.4.5.5. Trap Seals

1) Provision shall be made for maintaining the trap seal of a floor drain by
a) the use of a trap seal primer,
b) using the drain as a receptacle for an indirectly connected drinking fountain, or
c) other equally effective means.
(See Note A-2.4.5.5.(1).)

### 2.4.6. Arrangement of Drainage Piping

### 2.4.6.1. Separate Systems

1) No vertical soil-or-waste pipe shall conduct both sewage and storm water.
2) A combined building drain shall not be installed. (See Note A-2.1.2.1.(2).)
3) There shall be no unused open ends in a drainage system and dead ends shall be so graded that water will not collect in them.

### 2.4.6.2. Location of Soil-or-Waste Pipes

1) A soil-or-waste pipe shall not be located directly above
a) non-pressure potable water storage tanks,
b) manholes in pressure potable water storage tanks, or
c) food-handling or food-processing equipment.

### 2.4.6.3. Sumps or Tanks

(See Note A-2.4.6.3.)

1) Piping that is too low to drain into a building sewer by gravity shall be drained to a sump or receiving tank.
2) Where the sump or tank receives sewage, it shall be water- and air-tight and shall be vented.
3) Equipment such as a pump or ejector that can lift the contents of the sump or tank and discharge it into the building drain or building sewer shall be installed.
4) Where the equipment does not operate automatically, the capacity of the sump shall be sufficient to hold at least a 24 h accumulation of liquid.
5) Where there is a building trap, the discharge pipe from the equipment shall be connected to the building drain downstream of the trap.
6) The discharge pipe from every pumped sump shall be equipped with a union, a backwater valve and a shut-off valve installed in that sequence in the direction of discharge.
7) The discharge piping from a pump or ejector shall be sized for optimum flow velocities at pump design conditions.

### 2.4.6.4. Protection from Backflow

1) Except as permitted in Sentence (2), a backwater valve or a gate valve that would prevent the free circulation of air shall not be installed in a building drain or in a building sewer. (See Note A-2.4.6.4.(1).)
2) A backwater valve is permitted to be installed in a building drain provided that
a) it is a "normally open" design conforming to
i) CSA B70, "Cast Iron Soil Pipe, Fittings, and Means of Joining,"
ii) CAN/CSA-B181.1, "Acrylonitrile-Butadiene-Styrene (ABS) Drain, Waste, and Vent Pipe and Pipe Fittings,"
iii) CAN/CSA-B181.2, "Polyvinylchloride (PVC) and Chlorinated Polyvinylchloride (CPVC) Drain, Waste, and Vent Pipe and Pipe Fittings," or
iv) CAN/CSA-B182.1, "Plastic Drain and Sewer Pipe and Pipe Fittings," and
b) it does not serve more than one dwelling unit.
3) Except as provided in Sentences (4) to (6), where a building drain or a branch may be subject to backflow, a gate valve or a backwater valve shall be installed on every fixture drain connected to them when the fixture is located below the level of the adjoining street.
4) Where the fixture is a floor drain, a removable screw cap is permitted to be installed on the upstream side of the trap.
5) Where more than one fixture is located on a storey and all are connected to the same branch, the gate valve or backwater valve is permitted to be installed on the branch.
6) A subsoil drainage pipe that drains into a sanitary drainage system that is subject to surcharge shall be connected in such a manner that sewage cannot back up into the subsoil drainage pipe. (See Note A-2.4.6.4.(6).)

### 2.4.6.5. Mobile Home Sewer Service

1) A building sewer intended to serve a mobile home shall be
a) not less than 4 inches in size,
b) terminated above ground,
c) provided with
i) a tamperproof terminal connection that is capable of being repeatedly connected, disconnected and sealed,
ii) a protective concrete pad, and
iii) a means to protect it from frost heave, and
d) designed and constructed in accordance with good engineering practice.

### 2.4.7. Cleanouts

### 2.4.7.1. Cleanouts for Drainage Systems

1) Sanitary drainage systems and storm drainage systems shall be provided with cleanouts that will permit cleaning of the entire system.
2) A cleanout fitting shall be provided on the upstream side and directly over every running trap.
3) Interior leaders shall be provided with a cleanout fitting at the bottom of the leader or not more than 3 m upstream from the bottom of the leader.
4) Where a cleanout is required on a building sewer 8 inches or larger in size, it shall be a manhole.
5) A building sewer shall not change direction or slope between the building and public sewer or between cleanouts, except that pipes not more than 6 inches in size may change direction
a) by not more than $5^{\circ}$ every 3 m , or
b) by the use of fittings with a cumulative change in direction of not more than $45^{\circ}$.
6) Building drains shall be provided with a cleanout fitting conforming to Sentence 2.4.7.2.(2) that is located as close as practical to the place where the building drain leaves the building. (See Note A-2.4.7.1.(6).)
7) Soil-or-waste stacks shall be provided with a cleanout fitting
a) at the bottom of the stack,
b) not more than 3 m upstream of the bottom of the stack, or
c) on a Y fitting connecting the stack to the building drain or branch.
8) A cleanout shall be provided to permit the cleaning of the piping downstream of an interceptor.
9) Cleanouts shall be installed so that the cumulative change in direction is not more than $90^{\circ}$ between cleanouts in a drip pipe from a food receptacle or in a fixture drain serving a kitchen sink in a non-residential occupancy. (See Note A-2.4.7.1.(9).)
10) A fixture outlet pipe, a trap with a removable trap dip, or a separate cleanout shall be used as a cleanout for a fixture drain. (See Note A-2.4.7.1.(10).)
11) Building drains shall be provided with an additional cleanout for each cumulative horizontal change in direction exceeding $135^{\circ}$.

### 2.4.7.2. Size and Spacing of Cleanouts

1) Except as provided in Sentences (2) to (4), the size and spacing of cleanouts in nominally horizontal pipes of a drainage system shall conform to Table 2.4.7.2.

Table 2.4.7.2.
Permitted Size and Spacing of Cleanouts
Forming Part of Sentence 2.4.7.2.(1)

| Size of Drainage Pipe, inches | Minimum Size of Cleanout, inches | Maximum Spacing, m |  |
| :---: | :---: | :---: | :---: |
|  |  | One-Way Rodding | Two-Way Rodding |
| less than 3 | Same size as drainage pipe | 7.5 | 15 |
| 3 and 4 | 3 | 15 | 30 |
| over 4 | 4 | 26 | 52 |

2) Cleanout fittings for building drains shall be at least 4 inches in size.
3) The spacing between manholes serving a building sewer
a) 24 inches or less in size shall not exceed 90 m , and
b) over 24 inches in size shall not exceed 150 m .
4) The developed length of a building sewer between the building and the first manhole to which the building sewer connects shall not exceed 75 m .
5) Where a building sewer connects to another building sewer other than by a manhole, the developed length between the building and the building sewer to which it connects shall not exceed 30 m .
6) Cleanouts that allow rodding in one direction only shall be installed to permit rodding in the direction of flow.

### 2.4.7.3.

### 2.4.7.4.

### 2.4.8. Minimum Slope and Length of Drainage Pipes

### 2.4.8.1. Minimum Slope

1) Except as provided in Articles 2.4.10.8. and 2.4.10.9., drainage pipes that are 3 inches or less in size shall have a downward slope in the direction of flow of at least 1 in 50. (See Note A-2.4.8.1.(1).)

### 2.4.8.2. Length of Fixture Outlet Pipes

1) Except for fixture outlet pipes installed in conformance with Sentence 2.4.5.1.(3), the developed length of fixture outlet pipes shall not exceed 1200 mm . (See Note A-2.4.8.2.(1).) (See also Note A-2.4.5.1.(2).)

### 2.4.9. Size of Drainage Pipes

### 2.4.9.1. No Reduction in Size

1) A soil-or-waste pipe shall be of a size not less than the size of
a) a vent pipe that is connected to it, or
b) the largest soil-or-waste pipe that drains into it.

### 2.4.9.2. Serving Water Closets

1) Drainage pipes that serve a water closet shall be not less than 3 inches in size.
2) Branch and building drains downstream of the third water closet fixture drain connection shall be not less than 4 inches in size.
3) Soil-or-waste stacks that serve more than 6 water closets shall be not less than 4 inches in size.
4) Discharge pipes serving a macerating toilet system shall be not less than $3 / 4$ inch in size.

### 2.4.9.3. <br> Size of Fixture Outlet Pipes

1) Except as provided in Sentence (2), the size of fixture outlet pipes shall conform to Table 2.4.9.3.
2) The part of the fixture outlet pipe that is common to 3 compartments of a sink shall be one size larger than the largest fixture outlet pipe of the compartments that it serves. (See Note A-2.4.9.3.(2).)

Table 2.4.9.3.
Minimum Permitted Size of Fixture Outlet Pipe and Hydraulic Loads for Fixtures ${ }^{(1)}$ Forming Part of Sentences 2.4.9.3.(1) and 2.4.10.2.(1)

| Fixture | Minimum Size of Fixture Outlet Pipe, inches | Hydraulic Load, fixture units |
| :---: | :---: | :---: |
| Autopsy table | 11/2 | 2 |
| Bathroom group <br> (a) with flush tank <br> (b) with direct flush valve | n/a <br> n/a | $\begin{aligned} & 6 \\ & 8 \end{aligned}$ |
| Bathtub (with or without shower) | 11/2 | 11/2 |
| Bath: foot, sitz or slab | 11/2 | 11/2 |
| Beer cabinet | 11/2 | $11 / 2$ |
| Bidet | $11 / 4$ | 1 |
| Clothes washer <br> (a) domestic ${ }^{(1)}$ <br> (b) commercial | n/a <br> n/a | 2 with 2-in. trap 2 with 2-in. trap |
| Dental unit or cuspidor | $11 / 4$ | 1 |
| Dishwasher <br> (a) domestic type <br> (b) commercial type | $\begin{gathered} 11 / 2 \\ 2 \end{gathered}$ | $11 / 2$ no load when connected to garbage grinder or domestic sink $3$ |
| Drinking fountain | $11 / 4$ | 1/2 |
| Floor drain ${ }^{(2)}$ | 2 | 2 with 2-in. trap 3 with 3-in. trap |
| Garbage grinder, commercial type | 2 | 3 |
| Icebox | $11 / 4$ | 1 |
| Laundry tray <br> (a) single or double units or 2 single units with common trap <br> (b) 3 compartments | $\begin{aligned} & 11 / 2 \\ & 11 / 2 \end{aligned}$ | $11 / 2$ 2 |

Table 2.4.9.3. (Continued)

| Fixture | Minimum Size of Fixture Outlet Pipe, inches | Hydraulic Load, fixture units |
| :---: | :---: | :---: |
| Lavatory <br> (a) barber or beauty parlor <br> (b) dental <br> (c) domestic type, single or 2 single with common trap <br> (d) multiple or industrial type | $\begin{aligned} & 11 / 2 \\ & 11 / 4 \\ & 11 / 4 \\ & 11 / 2 \end{aligned}$ | $1 \frac{1}{2}$ 1 1 with $1 \frac{1}{4}$-in. trap $11 / 2$ with $1 \frac{1}{2}$-in. trap according to Table 2.4.10.2. |
| Macerating toilet system | 3/4 | 4 |
| Potato peeler | 2 | 3 |
| Shower drain <br> (a) from 1 head <br> (b) from 2 or 3 heads <br> (c) from 4 to 6 heads | $\begin{gathered} 11 / 2 \\ 2 \\ 3 \end{gathered}$ | $\begin{gathered} 11 / 2 \\ 3 \\ 6 \end{gathered}$ |
| Sink <br> (a) domestic and other small types with or without garbage grinders, single, double or 2 single with a common trap <br> (b) Other sinks | $11 / 2$ <br> $11 / 2$ | $11 / 2$ <br> $11 / 2$ with $11 / 2$-in. trap 2 with 2-in. trap 3 with 3-in. trap |
| Urinal <br> (a) pedestal, siphon-jet or blowout type <br> (b) stall, washout type <br> (c) wall <br> (i) washout type <br> (ii) other types | $\begin{aligned} & 2 \\ & 2 \end{aligned}$ <br> $11 / 2$ <br> 2 | $\begin{gathered} 4 \\ 2 \\ 11 / 2 \\ 3 \end{gathered}$ |
| Water closet <br> (a) with flush tank <br> (b) with direct flush valve | $\begin{aligned} & 3 \\ & 3 \end{aligned}$ | $\begin{aligned} & 4 \\ & 6 \end{aligned}$ |

## Notes to Table 2.4.9.3.:

(1) See Note A-Table 2.4.9.3.
(2) No hydraulic load for emergency floor drains.
3) Where clothes washers do not drain to a laundry tray, the trap inlet shall be fitted with a vertical standpipe that is not less than 600 mm long measured from the trap weir and terminates above the flood level rim of the clothes washer. (See Note A-2.4.9.3.(3).)

### 2.4.9.4. Size of Building Drain and Building Sewer

1) Building drains and building sewers connected to the public sewer system downstream of the main cleanout (see Sentence 2.4.7.1.(6)) shall be not less than 4 inches in size.

### 2.4.9.5. Offset in Leaders

1) No change in the size of a leader with a nominally horizontal offset is required if the offset
a) is located immediately under the roof,
b) is not more than 6 m long, and
c) has a slope of not less than 1 in 50 .
2) If the horizontal offset is more than 6 m long, the leader shall conform to Table 2.4.10.9.

### 2.4.10. Hydraulic Loads

(See Note A-2.4.10. for determination of hydraulic loads and drainage pipe sizes.)

### 2.4.10.1. Total Load on a Pipe

1) The hydraulic load on a pipe is the total load from
a) every fixture that is connected to the system upstream of the pipe,
b) every fixture for which provision is made for future connection upstream of the pipe, and
c) all roofs and paved surfaces that drain into the system upstream of the pipe.

### 2.4.10.2. Hydraulic Loads for Fixtures

1) The hydraulic load from a fixture that is listed in Table 2.4.9.3. is the number of fixture units set forth in the Table.
2) Except as provided in Sentence (1), the hydraulic load from a fixture that is not listed in Table 2.4.9.3. is the number of fixture units set forth in Table 2.4.10.2. for the trap of the size that serves the fixture.

Table 2.4.10.2.
Permitted Hydraulic Load from a Fixture Based on Size of Trap
Forming Part of Sentence 2.4.10.2.(2)

| Size of trap, inches | Hydraulic Load, fixture units |
| :---: | :---: |
| $1 \frac{1}{4}$ | 1 |
| $1 \frac{1}{2}$ | 2 |
| 2 | 3 |
| $2 \frac{1}{2}$ | 4 |
| 3 | 5 |
| 4 | 6 |

### 2.4.10.3. Hydraulic Loads from Fixtures with Continuous Flow

1) Except as provided in Sentence (2), the hydraulic load from a fixture that produces a continuous flow, such as a pump or an air-conditioning fixture, is 31.7 fixture units for each litre per second of flow.
2) Where a fixture or equipment that produces a continuous or semi-continuous flow drains to a combined sewer or to a storm sewer, the hydraulic load from the fixture is 900 L for each litre per second of flow.

### 2.4.10.4. Hydraulic Loads from Roofs or Paved Surfaces

1) Except as provided in Sentence (2), the hydraulic load in litres from a roof or paved surface is the maximum 15 min rainfall determined in conformance with Subsection 1.1.3. of Division B of the NBC, multiplied by the sum of
a) the area in square metres of the horizontal projection of the surface drained, and
b) one-half the area in square metres of the largest adjoining vertical surface. (See Note A-2.4.10.4.(1).)
2) Flow control roof drains may be installed, provided
a) the maximum drain down time does not exceed 24 h ,
b) the roof structure is designed to carry the load of the stored water,
c) one or more scuppers are installed not more than 30 m apart along the perimeter of the building so that
i) up to $200 \%$ of the 15 -minute rainfall intensity can be handled, and
ii) the maximum depth of controlled water is limited to 150 mm ,
d) they are located not more than 15 m from the edge of the roof and not more than 30 m from adjacent drains, and
e) there is at least one drain for each $900 \mathrm{~m}^{2}$.
3) Hydraulic loads, in litres per second, for flow control roof drains and restricted paved area drains shall be determined according to rain intensity-duration frequency curves as compiled by Environment Canada using 25-year frequencies.
4) Where the height of the parapet is more than 150 mm or exceeds the height of the adjacent wall flashing,
a) emergency roof overflows or scuppers described in Clause (2)(c) shall be provided, and
b) there shall be a minimum of 2 roof drains.

### 2.4.10.5. Conversion of Fixture Units to Litres

1) Except as provided in Sentence 2.4.10.3.(2), where the hydraulic load is to be expressed in litres, fixture units shall be converted as follows:
a) when the number of fixture units is 260 or fewer, the load is 2360 L , and
b) when the number of fixture units exceeds 260 , the load is 9.1 L for each fixture unit.

### 2.4.10.6. Hydraulic Loads to Soil-or-Waste Pipes

1) Except as provided in Sentence (2), the hydraulic load that is drained to every soil-or-waste stack shall conform to Table 2.4.10.6.-A.
2) Where the nominally horizontal offset in a soil-or-waste stack is 1.5 m or more, the hydraulic load that is served by it shall conform to Table 2.4.10.6.-B or Table 2.4.10.6.-C, whichever is the less restrictive.

Table 2.4.10.6.-A
Maximum Permitted Hydraulic Load Drained to a Soil-or-Waste Stack Forming Part of Sentence 2.4.10.6.(1)

| Size of Stack, inches | Maximum Hydraulic Load, fixture units | Maximum Fixture Units Drained from any 1 Storey |
| :---: | :---: | :---: |
| $11 / 4$ | 2 | 2 |
| $11 / 2$ | 8 | 2 |
| 2 | 24 | 6 |
| 3 | 102 | 18 |
| 4 | 540 | 100 |
| 5 | 1400 | 250 |
| 6 | 2900 | 500 |
| 8 | 7600 | 830 |
| 10 | 15000 | 2700 |
| 12 | 26000 | 4680 |
| 15 | 5000 | 9000 |

Table 2.4.10.6.-B
Maximum Permitted Hydraulic Load Drained to a Branch Forming Part of Sentence 2.4.10.6.(2) and Article 2.4.10.7.

| Size of Branch, inches | Maximum Hydraulic Load, fixture units |
| :---: | :---: |
| $11 / 4$ | 2 |
| $11 / 2$ | 3 |
| 2 | 6 |
| $21 / 2$ | 12 |
| 3 | 27 |
| 4 | 180 |
| 5 | 390 |
| 6 | 700 |
| 8 | 1600 |
| 10 | 2500 |
| 12 | 3900 |

Table 2.4.10.6.-C
Maximum Permitted Hydraulic Load Drained to a Sanitary Building Drain or Sewer Forming Part of Sentence 2.4.10.6.(2) and Article 2.4.10.8.

| Size of Drain or <br> Sewer, inches | Maximum Hydraulic Load, fixture units |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1 in 400 | 1 in 200 | 1 in 133 | 1 in 100 | 1 in 50 | 1 in 25 |
| 3 | - | - | - | - | 27 | 36 |
| 4 | - | - | - | 180 | 240 | 300 |
| 5 | - | - | 380 | 390 | 480 | 670 |
| 6 | - | - | 600 | 700 | 840 | 1300 |
| 8 | - | 1400 | 1500 | 1600 | 2250 | 3370 |
| 10 | - | 2500 | 2700 | 3000 | 4500 | 6500 |
| 12 | 2240 | 3900 | 4500 | 5400 | 8300 | 13000 |
| 15 | 4800 | 7000 | 9300 | 10400 | 16300 | 22500 |

### 2.4.10.7. Hydraulic Loads on Branches

1) The hydraulic load that is drained to a branch shall conform to Table 2.4.10.6.-B.

### 2.4.10.8. Hydraulic Loads on Sanitary Building Drains or Sewers

1) The hydraulic load that is drained to a sanitary building drain or a sanitary building sewer shall conform to Table 2.4.10.6.-C.
2.4.10.9. Hydraulic Loads on Storm or Combined Building Drains or Sewers
2) The hydraulic load that is drained to a storm building drain, a storm building sewer or a combined building sewer shall conform to Table 2.4.10.9.

Table 2.4.10.9.
Maximum Permitted Hydraulic Load Drained to a Storm Building Drain or Sewer or a Combined Building Sewer Forming Part of Article 2.4.10.9.

| Size of Drain or <br> Sewer, inches | Maximum Hydraulic Load, L |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Slope |  |  |  |  |  |  |
|  | 1 in 400 | 1 in 200 | 1 in 133 | 1 in 100 | 1 in 68 | 1 in 50 | 1 in 25 |
| 3 | - | - | - | - | 2770 | 3910 |  |
| 5 | - | - | - | 4220 | 5160 | 5970 | 8430 |
| 6 | - | - | 6760 | 7650 | 9350 | 10800 | 15300 |
| 8 | - | - | 10700 | 12400 | 15200 | 17600 | 24900 |
| 10 | - | 18900 | 23200 | 26700 | 32800 | 37800 | 53600 |
| 12 | - | 34300 | 41900 | 48500 | 59400 | 68600 | 97000 |
| 15 | 37400 | 55900 | 68300 | 78700 | 96500 | 112000 | 158000 |
|  | 71400 | 101000 | 124000 | 143000 | 175000 | 202000 | 287000 |

### 2.4.10.10. Hydraulic Loads to Roof Gutters

1) The hydraulic load that is drained to a roof gutter shall conform to Table 2.4.10.10.

Table 2.4.10.10.
Maximum Permitted Hydraulic Load Drained to a Roof Gutter Forming Part of Article 2.4.10.10.

| Size of Gutter, inches | Area of Gutter, $\mathrm{cm}^{2}$ | Maximum Hydraulic Load, L |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Slope |  |  |  |
|  |  | 1 in 200 | 1 in 100 | 1 in 50 | 1 in 25 |
| 3 | 22.8 | 406 | 559 | 812 | 140 |
| 4 | 40.5 | 838 | 1190 | 1700 | 2410 |
| 5 | 63.3 | 1470 | 2080 | 2950 | 4170 |
| 6 | 91.2 | 2260 | 3200 | 4520 | 6530 |
| 7 | 124.1 | 3250 | 4600 | 6500 | 9190 |
| 8 | 162.1 | 4700 | 6600 | 9400 | 13200 |
| 10 | 253.4 | 8480 | 12000 | 17000 | 23600 |

### 2.4.10.11. Hydraulic Loads on Leaders

1) The hydraulic load that is drained to a leader shall conform to Table 2.4.10.11.

Table 2.4.10.11.
Maximum Permitted Hydraulic Load Drained to a Leader
Forming Part of Article 2.4.10.11.

| Circular Leader |  | Non-Circular Leader |  |
| :---: | :---: | :---: | :---: |
| Size of Leader, inches | Maximum Hydraulic Load, L | Area of Leader, cm ${ }^{2}$ | Maximum Hydraulic Load, L |
| 2 | 1700 | 20.3 | 1520 |
| $21 / 2$ | 3070 | 31.6 | 2770 |
| 3 | 5000 | 45.6 | 4500 |
| 4 | 10800 | 81.1 | 9700 |
| 5 | 19500 | 126.6 | 17600 |
| 6 | 31800 | 182.4 | 28700 |
| 8 | 68300 | 324.3 | 61500 |

### 2.4.10.12. Hydraulic Loads from Fixtures with a Semi-continuous Flow

1) The hydraulic load from a fixture or equipment that produces a semi-continuous flow shall conform to Table 2.4.10.12.

Table 2.4.10.12.
Maximum Permitted Hydraulic Load from Fixtures with a Semi-continuous Flow
Forming Part of Sentence 2.4.10.12.(1)

| Trap Size, inches | Flow, L/s | Hydraulic Load, fixture units |
| :---: | :---: | :---: |
| $11 / 2$ | $0.00-0.090$ | 3 |
| 2 | $0.091-0.190$ | 6 |
| 3 | $0.191-0.850$ | 27 |
| 4 | $0.851-5.700$ | 180 |

### 2.4.10.13. Design of Storm Sewers

1) Except as provided in Sentences 2.4.10.4.(1) and (2), and Article 2.4.10.9., storm sewers may be designed in accordance with good engineering practice.

## Section 2.5. Venting Systems

### 2.5.1. Vent Pipes for Traps

### 2.5.1.1. Venting for Traps

1) Except as provided in Sentences (3) and (4), traps shall be protected by a vent pipe.
2) Drainage systems may require additional protection as provided in Subsections 2.5 .4 . and 2.5 .5 . by the installation of
a) branch vents,
b) vent stacks,
c) stack vents,
d) vent headers,
e) fresh air inlets,
f) relief vents,
g) circuit vents,
h) yoke vents,
i) offset relief vents,
j) additional circuit vents,
k) wet vents,
3) individual vents,
m) dual vents, or
n) continuous vents.
4) A trap that serves a floor drain need not be protected where
a) the size of the trap is not less than 3 inches,
b) the length of the fixture drain is not less than 450 mm , and
c) the fall on the fixture drain does not exceed its size.
(See Note A-2.5.1.1.(3).)
5) A trap need not be protected by a vent pipe
a) where it serves
i) a subsoil drainage pipe, or
ii) a storm drainage system, or
b) where it forms part of an indirect drainage system. (See also

Clause 2.4.2.3.(2)(b).)
(See Note A-2.5.1.1.(4).)

### 2.5.2. Wet Venting

### 2.5.2.1. Wet Venting

(See Note A-2.5.2.1.)

1) A soil-or-waste pipe is permitted to serve as a wet vent, provided
a) the hydraulic load is in accordance with Table 2.5.8.1.,
b) the number of wet-vented water closets does not exceed 2 ,
c) where 2 water closets are installed, they are connected at the same level by means of a double sanitary T fitting if the vent pipe is vertical and by means of a double Y fitting if the vent pipe is horizontal,
d) the water closets are installed downstream of all other fixtures,
e) trap arms and fixture drains connected to the wet vent do not exceed 2 inches in size, except for connections from emergency floor drains in accordance with Sentence 2.5.1.1.(3),
f) the total hydraulic load on the wet vent does not exceed the limits stated in Table 2.5.8.1. when separately vented branches or fixture drains in the same storey, having a total hydraulic load not greater than 2 fixture units, are connected to the wet vent or a wet-vented water closet trap arm,
g) the hydraulic load of separately vented fixtures that drain into the wet vent are not included when sizing the continuous vent that serves the wet vent,
h) where a wet vent extends through more than one storey, the total discharge from any one storey above the first storey does not exceed 4 fixture units,
i) there is not more than one nominally horizontal offset in the wet vent, and
i) the offset does not exceed 1.2 m for pipes 2 inches or less in size, or
ii) the offset does not exceed 2.5 m for pipes larger than 2 inches in size,
j) the wet-vented portion is not reduced in size except for the portion that is upstream of emergency floor drains in accordance with Sentence 2.5.1.1.(3), and
k) the length of the wet vent is not limited.

### 2.5.3. Circuit Venting

### 2.5.3.1. Circuit Venting

(See Note A-2.5.3.1.)

1) A section of horizontal branch is permitted to be circuit-vented, provided
a) a circuit vent is connected to it,
b) all fixtures served by the circuit vent are located in the same storey, and
c) no soil-or-waste stack is connected to it upstream of a circuit-vented fixture.
2) Fixtures with fixture outlet pipes less than 2 inches in size shall be separately vented or separately circuit-vented.
3) Except as provided in Sentences (4) and (5), a relief vent shall be connected to the branch that forms part of a circuit-vented system, downstream of the connection of the most downstream circuit-vented fixture.
4) A soil-or-waste pipe having a hydraulic load not greater than 6 fixture units is permitted to act as a relief vent for a branch that is circuit-vented.
5) A symmetrically connected relief vent is permitted to serve as a combined relief vent for a maximum of 2 branches that are circuit-vented, provided there are not more than 8 circuit-vented fixtures connected between the combined relief vent and each circuit vent.
6) Additional circuit vents shall be required
a) where each cumulative horizontal change in direction of a branch served by a circuit vent exceeds $45^{\circ}$ between vent pipe connections, or
b) where more than 8 circuit-vented fixtures are connected to a branch between vent pipe connections.
7) A soil-or-waste pipe is permitted to serve as an additional circuit vent in accordance with Sentence (6), provided the soil-or-waste pipe is sized as a wet vent in conformance with Article 2.5.8.1. and is not less than 2 inches in size.
8) Connections to circuit vents and additional circuit vents in accordance with Sentence (6) shall conform to Sentence 2.5.4.5.(1).
9) A circuit-vented branch, including the fixture drain downstream of the circuit vent connection, shall be sized in accordance with Article 2.4.10.7., except that it shall be not less than
a) 2 inches, where traps less than 2 inches in size are circuit-vented, or
b) 3 inches, where traps 2 inches in size or larger are circuit-vented.
10) Additional circuit vents shall be sized in accordance with Table 2.5.7.1. and Sentence 2.5.7.3.(1).
11) The hydraulic load on a circuit vent shall include the hydraulic load from fixtures connected to the branch served by the circuit vent, but shall not include the hydraulic load from fixtures permitted by Sentences (3), (4) and (5).

### 2.5.4. Vent Pipes for Soil-or-Waste Stacks

### 2.5.4.1. Stack Vents

1) The upper end of every soil-or-waste stack shall terminate in a stack vent.

### 2.5.4.2. Vent Stacks

1) Except as provided in Sentence (2), every soil-or-waste stack draining fixtures from more than 4 storeys that contain plumbing fixtures shall have a vent stack.
2) A soil-or-waste stack that serves as a wet vent does not require a vent stack.
3) The vent stack required by Sentence (1) shall be connected to a vertical section of the soil-or-waste stack at or immediately below the lowest soil-or-waste pipe connected to the soil-or-waste stack.
4) Fixtures are permitted to be connected to a vent stack, provided
a) the total hydraulic load of the connected fixtures does not exceed 8 fixture units,
b) at least one fixture is connected to a vertical portion of the vent stack and upstream of any other fixtures,
c) no other fixture is connected downstream of a water closet,
d) all fixtures are located in the lowest storey served by the vent stack, and
e) the section of the vent pipe that acts as a wet vent conforms to the requirements regarding wet vents.

### 2.5.4.3. Yoke Vents

(See Note A-2.5.4.3.)

1) Except as provided in Sentence (4), where a soil-or-waste stack receives the discharge from fixtures located on more than 11 storeys, a yoke vent shall be installed
a) for each section of 5 storeys or part thereof counted from the top down, and
b) at or immediately above each offset or double offset.
2) The yoke vent shall be connected to the soil-or-waste stack by means of a drainage fitting at or immediately below the lowest soil-or-waste pipe from the lowest storey of the sections described in Sentence (1).
3) The yoke vent shall connect to the vent stack at least 1 m above the floor level of the lowest storey in the section described in Sentence (1).
4) A yoke vent need not be installed provided the soil-or-waste stack is interconnected with the vent stack in each storey of the section in which fixtures are located by means of a vent pipe equal in size to the branch or fixture drain or 2 inches in size, whichever is smaller.

### 2.5.4.4. Offset Relief Vents

1) A soil-or-waste stack that has a nominally horizontal offset more than 1.5 m long and above which the upper vertical portion of the stack passes through more than 2 storeys and receives a hydraulic load of more than 100 fixture units shall be vented by an offset relief vent connected to the vertical section immediately above the offset and by another offset relief vent
a) connected to the lower vertical section at or above the highest soil-or-waste pipe connection, or
b) extended as a vertical continuation of the lower section.
(See Note A-2.5.4.4.(1).)

### 2.5.4.5. Fixtures Draining into Vent Pipes

1) The trap arm of a fixture that has a hydraulic load of not more than $11 / 2$ fixture units may be connected to the vertical section of a circuit vent, additional circuit vent, offset relief vent or yoke vent, provided
a) not more than 2 fixtures are connected to the vent pipe,
b) where 2 fixtures are connected to the vent pipe, the connection is made by means of a double sanitary T fitting, and
c) the section of the vent pipe that acts as a wet vent is not less than 2 inches in size.
(See Note A-2.5.4.5.(1).)

### 2.5.5. Miscellaneous Vent Pipes

### 2.5.5.1. Venting of Sewage Sumps

1) Every sump that receives sewage shall be provided with a vent pipe that is connected to the top of the sump. (See Article 2.5.7.7. for sizing of these vents.)

### 2.5.5.2. Venting of Oil Interceptors

(See Note A-2.5.5.2.) (See also Article 4.3.5.2. of Division B of the NFC.)

1) Every oil interceptor shall be provided with 2 vent pipes that
a) connect to the interceptor at opposite ends,
b) extend independently to outside air, and
c) terminate not less than 2 m above ground and at elevations differing by at least 300 mm .
2) Adjacent compartments within an oil interceptor shall be connected to each other by a vent opening.
3) Where a secondary receiver for oil is installed in conjunction with an oil interceptor, it shall be vented in accordance with the manufacturer's recommendations, and the vent pipe shall
a) in no case be less than $1 \frac{1}{2}$ inches in size,
b) extend independently to outside air, and
c) terminate not less than 2 m above ground.
4) The vent pipes referred to in Sentence (1) are permitted to be one size smaller than the largest connected drainage pipe but not less than $1 \frac{1}{4}$ inches in size, or can be sized in accordance with the manufacturer's recommendations.
5) A vent pipe that serves an oil interceptor and is located outside a building shall be not less than 3 inches in size in areas where it may be subject to frost closure.

### 2.5.5.3. Venting of Drain Piping and Dilution Tanks for Corrosive Waste

1) Venting systems for drain piping or dilution tanks conveying corrosive waste shall extend independently and terminate in outside air. (See Article 2.5.7.7. for sizing of these vents.)

### 2.5.5.4. Fresh Air Inlets

1) Where a building trap is installed, a fresh air inlet not less than 4 inches in size shall be connected upstream and within 1.2 m of the building trap and downstream of any other connection. (See Note A-2.4.5.4.(1).)

### 2.5.5.5. Provision for Future Installations

1) Where provision is made for a fixture to be installed in the future, the drainage system and venting system shall be sized accordingly and provision shall be made for the necessary future connections.
2) Except as required in Sentence 2.5.7.7.(2), where a plumbing system is installed in a building, every storey in which plumbing is or may be installed, including the basement of a single-family dwelling, shall have extended into it or passing through it a vent pipe that is at least $1 \frac{1}{2}$ inches in size for the provision of future connections.

### 2.5.6. Arrangement of Vent Pipes

### 2.5.6.1. Drainage of Vent Pipes

1) Vent pipes shall be installed without depressions in which moisture can collect.

### 2.5.6.2. Vent Pipe Connections

1) Vent pipes shall be installed in a nominally vertical position where it is practical to do so.
2) Except for wet vents, where a vent pipe is connected to a nominally horizontal soil-or-waste pipe, the connection shall be above the horizontal centre line of the soil-or-waste pipe. (See Note A-2.5.6.2.(2).)
3) Unused vent pipes installed for future connections shall be permanently capped with an end cleanout or an adapter and plug.

### 2.5.6.3. Location of Vent Pipes

1) Except as provided in Sentences (2) and (3), vent pipes that protect a fixture trap shall be located so that
a) the developed length of the trap arm is not less than twice the size of the fixture drain,
b) the total fall of the trap arm is not greater than its inside diameter, and
c) the trap arm does not have a cumulative change in direction of more than $135^{\circ}$.
(See Note A-2.5.6.3.(1).)
2) The trap arm of water closets, of S-trap standards or of any other fixture that also discharges vertically and depends on siphonic action for its proper functioning shall not have a cumulative change in direction of more than $225^{\circ}$. (See Note A-2.5.6.3.(2).)
3) A vent pipe that protects a water closet or any other fixture that also depends on siphonic action for its proper functioning shall be located so that the distance between the connections of the fixture drain to the fixture and the vent pipe does not exceed
a) 1 m in the vertical plane, and
b) 3 m in the horizontal plane.
(See Note A-2.5.6.3.(3).)
4) The maximum length of every trap arm shall conform to Table 2.5.6.3.

Table 2.5.6.3.
Length of Trap Arm
Forming Part of Sentence 2.5.6.3.(4)

| Size of Trap Served, inches | Maximum Length of Trap Arm, m | Minimum Slope |
| :---: | :---: | :---: |
| $11 / 4$ | 1.5 | $1 / 50$ |
| $11 / 2$ | 1.8 | $1 / 50$ |
| 2 | 2.4 | $1 / 50$ |
| 3 | 3.6 | $1 / 50$ |
| 4 | 9.8 | $1 / 100$ |

### 2.5.6.4. Connection of Vents above Fixtures Served

1) Except for a wet vent, every vent pipe shall extend above the flood level rim of every fixture that it serves before being connected to another vent pipe.
2) No vent pipe shall be connected in such a manner that a blockage in a soil-or-waste pipe would cause waste to drain through the vent pipe to the drainage system.

### 2.5.6.5. Terminals

1) Except as provided in Sentence (3), the upper end of every vent pipe that is not terminated in outside air shall be connected to a venting system that terminates through a roof to outside air.
2) The upper end of every vent pipe that is terminated in outside air, other than a vent pipe that serves an oil interceptor or a fresh air inlet, shall be extended above the roof.
3) A vent pipe is permitted to be erected outside a building, provided that
a) no single change in direction of the vent pipe exceeds $45^{\circ}$,
b) all parts of the vent pipe are nominally vertical,
c) in areas where the vent pipe may be subject to frost closure, it is increased to not less than 3 inches in size before penetrating a wall or roof, and
d) where the building is 4 storeys or less in height, the vent pipe terminates above the roof of the building.
4) Except for a fresh air inlet, where a vent pipe is terminated in outside air, the terminal shall be located
a) not less than 1 m above and not less than 3.5 m in any other direction from every air inlet, openable window or door,
b) not less than 2 m above and not less than 3.5 m in any other direction from a roof that supports an occupancy,
c) not less than 2 m above ground, and
d) not less than 1.8 m from every property line.
(See Note A-2.5.6.5.(4).)
5) Where a vent pipe passes through a roof, it shall
a) be terminated high enough to prevent the entry of roof drainage but not less than 150 mm above the roof or above the surface of storm water, which could pond on the roof (see Note A-2.5.6.5.(4)), and
b) be provided with flashing to prevent the entry of water between the vent pipe and the roof (see Article 2.2.10.14.).
6) Where a vent pipe passes through a roof and may be subject to frost closure, it shall be protected from frost closure by
a) increasing its diameter at least one size, but not less than 3 inches in size, immediately before it penetrates the roof,
b) insulating the pipe, or
c) protecting it in some other manner.
(See Article 2.3.4.7.)

### 2.5.7. Minimum Size of Vent Pipes

### 2.5.7.1. General

1) The size of every vent pipe shall conform to Table 2.5.7.1.

Table 2.5.7.1.
Minimum Permitted Size of Vent Pipe Based on Size of Trap Served
Forming Part of Sentences 2.5.7.1.(1) and 2.5.8.2.(1)

| Size of Trap Served, inches | Minimum Size of Vent Pipe, inches |
| :---: | :---: |
| $11 / 4$ | $11 / 4$ |
| $11 / 2$ | $11 / 4$ |
| 2 | $11 / 2$ |
| 3 | $1 \frac{1}{2}$ |
| 4 | $11 / 2$ |
| 5 | 2 |
| 6 | 2 |

### 2.5.7.2. Size Restriction

1) The size of a branch vent, stack vent, vent stack or vent header shall be not less than the size of the vent pipe to which it is connected.
2) Sanitary building drains shall be provided with at least one vent that is not less than 3 inches in size.

### 2.5.7.3. Additional Circuit Vents and Relief Vents

1) Except as provided in Article 2.5.7.1. and Sentence 2.5.3.1.(7), the minimum size of an additional circuit vent or relief vent installed in conjunction with a circuit vent is permitted to be one size smaller than the required size of the circuit vent, but need not be larger than 2 inches.
2) The size of the soil-or-waste pipe acting as a relief vent in accordance with Sentence 2.5.3.1.(4) shall be in conformance with Tables 2.4.10.6.-A, 2.4.10.6.-B or 2.5.8.1., and Article 2.5.7.1., whichever size is the largest considering the hydraulic load drained into the soil-or-waste pipe.

### 2.5.7.4. Offset Relief Vents

1) Except as provided in Article 2.5.7.1., the minimum size of an offset relief vent is permitted to be one size smaller than the size of the stack vent.

### 2.5.7.5. Yoke Vents

1) Yoke vents required by Sentence 2.5.4.3.(1) are permitted to be one size smaller than the size of the smallest pipe to which they are connected.

### 2.5.7.6. Vent Pipes for Manholes

1) The minimum size of a vent pipe that serves a manhole within a building shall be 2 inches.

### 2.5.7.7. Vents for Sewage Sumps, Dilution Tanks and Macerating Toilet Systems

1) Except as provided in Sentences (2) and (3), the minimum size of the vent pipe for a sewage sump or dilution tank shall be one size smaller than the size of the largest branch or fixture drain draining to the sump.
2) The size of every vent pipe for a sewage sump or dilution tank shall be not less than 2 inches, but need not be greater than 4 inches.
3) The size of a vent pipe for a macerating toilet system with a sump shall be not less than $11 / 2$ inches.

### 2.5.8. Sizing of Vent Pipes

(See Note A-2.5.8. for an explanation on the sizing of vent pipes.)

### 2.5.8.1. Hydraulic Loads Draining to Wet Vents

1) The hydraulic load that drains to a wet vent shall conform to Table 2.5.8.1.
2) When determining the size of a wet vent, the hydraulic load from the most downstream fixture or symmetrically connected fixtures shall not be included. (See Note A-2.5.8.1.(2).)

Table 2.5.8.1.
Maximum Permitted Hydraulic Loads Drained to a Wet Vent
Forming Part of Sentence 2.5.8.1.(1)

| Size of Wet Vent, inches | Maximum Hydraulic Load, fixture units |  |
| :---: | :---: | :---: |
|  | Not Serving Water Closets | Fixtures, Other Than Water Closets, That Serve <br> Not More Than 2 Water Closets |
| $11 / 2$ | 2 | - |
| 2 | 4 | 3 |
| 3 | 12 | 8 |
| 4 | 36 | 14 |
| 5 | - | 18 |
| 6 | - | 23 |

### 2.5.8.2. Individual Vents and Dual Vents

1) The size of individual vents and dual vents shall be determined using Table 2.5.7.1. based on the largest trap served.
2) When sizing an individual vent or a dual vent, the length is not taken into consideration.

### 2.5.8.3. Branch Vents, Vent Headers, Continuous Vents and Circuit Vents

 (See Note A-2.5.8.3. and 2.5.8.4.)1) Branch vents, vent headers, circuit vents and continuous vents shall be sized in accordance with Table 2.5.8.3., unless they are individual vents or dual vents.
2) For the purposes of Table 2.5.8.3., the length of a branch vent shall be its developed length from the most distant soil-or-waste pipe connection to a vent stack, stack vent, vent header or outside air.
3) For the purposes of Table 2.5.8.3., the length of a vent header shall be its developed length from the most distant soil-or-waste pipe connection to outside air.
4) For the purposes of Table 2.5.8.3., the length of a circuit vent shall be its developed length from the horizontal soil-or-waste pipe connection to a vent stack, stack vent, vent header or outside air.
5) For the purposes of Table 2.5.8.3., the length of a continuous vent shall be its developed length from the vertical soil-or-waste pipe connection to a vent stack, stack vent, vent header or outside air.

Table 2.5.8.3.
Sizing of Branch Vents, Vent Headers, Circuit Vents and Continuous Vents Forming Part of Article 2.5.8.3.

| Total Hydraulic Load Served by Vent Pipe, fixture units | Size of Vent Pipe, inches |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $11 / 4$ | $11 / 2$ | 2 | 3 | 4 | 5 | 6 | 8 |
|  | Maximum Length of Vent Pipe, m |  |  |  |  |  |  |  |
| 2 | 9 |  |  |  |  |  |  |  |
| 8 | 9 | 30 | 61 |  |  |  |  |  |
| 20 | 7.5 | 15 | 46 |  |  |  |  |  |
| 24 | 4.5 | 9 | 30 |  |  |  |  |  |
| 42 |  | 9 | 30 |  |  |  |  |  |
| 60 |  | 4.5 | 15 | 120 |  |  |  |  |
| 100 |  |  | 11 | 79 | 305 |  |  |  |
| 200 |  |  | 9 | 76 | 275 |  |  |  |
| 500 |  |  | 6 | 55 | 215 |  |  |  |
| 1100 |  |  |  | 15 | 61 | 215 |  |  |
| 1900 |  |  |  | 6 | 21 | 61 | 215 |  |
| 2200 |  |  |  |  | 9 | 27 | 105 | 335 |
| 3600 |  |  |  |  | 7.5 | 18 | 76 | 245 |
| 5600 |  |  |  |  |  | 7.5 | 18 | 76 |

### 2.5.8.4. Vent Stacks or Stack Vents

(See Note A-2.5.8.3. and 2.5.8.4.)

1) A vent stack or stack vent shall be sized in accordance with Table 2.5.8.4. based on
a) the length of the vent stack or stack vent, and
b) the total hydraulic load that is drained to the lowest section of soil-or-waste stack or stacks served by the vent pipe, plus any additional vent loads connected to the vent stack or stack vent.
2) For the purposes of Table 2.5.8.4., the length of a stack vent or vent stack shall be its developed length from its lower end to outside air.
3) The minimum size of a vent stack or stack vent shall be one-half the size of the soil-or-waste stack at its base.
4) A stack vent serving a wet vent stack that is over 4 storeys high shall extend the full size of the wet vent to outside air.

Table 2.5.8.4.
Size and Developed Length of Stack Vents and Vent Stacks
Forming Part of Sentences 2.5.8.4.(1) and (2)

Notes to Table 2.5.8.4.:
${ }^{(1)}$ Soil-or-waste stacks shall be sized using Table 2.4.10.6.-A.

### 2.5.8.5. Lengths of Other Vent Pipes

1) When sizing an additional circuit vent, offset relief vent, relief vent, yoke vent, and the vent pipe for an interceptor, dilution tank, sewage tank, sump, or manhole, length is not taken into consideration.

### 2.5.9. Air Admittance Valves

(See Note A-2.2.10.16.(1).)

### 2.5.9.1. Air Admittance Valve as a Vent Terminal

1) Individual vents and dual vents are permitted to terminate with a connection to an air admittance valve as provided in Articles 2.5.9.2 and 2.5.9.3. (See also Sentence 2.2.10.16.(1).)

### 2.5.9.2. Air Admittance Valves

1) Air admittance valves shall only be used to vent
a) fixtures located in island counters,
b) fixtures that may be affected by frost closure of the vent due to local climatic conditions,
c) fixtures in one- and two-family dwellings undergoing renovation, or
d) installations where connection to a vent may not be practical.
2) Air admittance valves shall be located
a) not less than 100 mm above the fixture drain being vented,
b) within the maximum developed length permitted for the vent, and
c) not less than 150 mm above insulation materials.

### 2.5.9.3. Installation Conditions

1) Air admittance valves shall not be installed in supply or return air plenums, or in locations where they may be exposed to freezing temperatures.
2) Air admittance valves shall be installed in accordance with the manufacturer's installation instructions.
3) Air admittance valves shall be rated for the size of vent pipe to which they are connected.
4) Installed air admittance valves shall be
a) accessible, and
b) located in a space that allows air to enter the valve.
5) Drainage systems shall have at least one vent that terminates to the outdoors in conformance with Sentence 2.5.6.5.(1).

## Section 2.6. Potable Water Systems

### 2.6.1. Arrangement of Piping

### 2.6.1.1. Design

1) Fixtures supplied with separate hot and cold water controls shall have the hot water control on the left and the cold on the right.
2) In a hot water distribution system of a developed length of more than 30 m or supplying more than 4 storeys, the water temperature shall be maintained by
a) recirculation, or
b) a self-regulating heat tracing system.

### 2.6.1.2. Drainage

1) A water distribution system shall be installed so that the system can be drained or blown out with air.

### 2.6.1.3. Shut-off Valves

1) Water service pipes shall be provided with an accessible shut-off valve located as close as possible to where the water service pipe enters the building.
2) Pipes that convey water from a gravity water tank or from a private water supply system shall be fitted with a shut-off valve at the source of supply.
3) Except for risers that serve only one dwelling unit, risers shall be provided with a shut-off valve located at the source of supply.
4) Water closets shall be provided with a shut-off valve on their water supply pipe.
5) In buildings of residential occupancy that contain more than one dwelling unit, a shut-off valve shall be installed where the water supply enters each dwelling unit, so that, when the water supply to one suite is shut off, the water supply to the remainder of the building is not interrupted. (See Note A-2.6.1.3.(5).)
6) In buildings of other than residential occuрancy, shut-off valves shall be provided on the water supply to
a) every fixture, or
b) any group of fixtures in the same room, except as provided in Sentence (4).
7) Pipes that supply water to a hot water tank shall be provided with a shut-off valve located close to the tank.

### 2.6.1.4. Protection for Exterior Water Supply

1) Pipes that pass through an exterior wall to supply water to the exterior of the building shall be provided with
a) a frost-proof hydrant, or
b) a stop-and-waste cock located inside the building and close to the wall.

### 2.6.1.5. Check Valves

1) A check valve shall be installed at the building end of a water service pipe where the pipe is made of plastic that is suitable for cold water use only.

### 2.6.1.6. Flushing Devices

1) Flushing devices that serve water closets or urinals shall have sufficient capacity and be adjusted to deliver at each operation a volume of water that will thoroughly flush the fixture or fixtures they serve.
2) Where a manually operated flushing device is installed, it shall serve only one fixture.
3) Except as provided in Sentence (4), water closets and urinals shall have an integral means of limiting the maximum amount of water used in each flush cycle to that specified in Table 2.6.1.6.

Table 2.6.1.6.
Water Usage per Flush Cycle
Forming Part of Sentence 2.6.1.6.(3)

| Fixtures | Maximum Water Usage per Flush Cycle, Lpf |
| :--- | :---: |
| Water closets - residential |  |
| single-flush | 4.8 |
| dual-flush: 6.0/4.1 Lpf | 4.8 |
| Water closets - industrial, commercial, institutional | 6.0 |
| Urinals | 1.9 |

4) In residential retrofits, a maximum water usage of 6.0 Lpf shall be permitted for single-flush water closets where it can be demonstrated that a maximum water usage of 4.8 Lpf would be impracticable given the existing building or municipal infrastructure.
5) Except where installed in buildings not intended to be occupied year-round, flush-tank-type urinals shall be equipped with a device capable of preventing flush cycles when they are not in use. (See Note A-2.6.1.6.(5).)

### 2.6.1.7.

## Relief Valves

1) In addition to the requirements in Sentence (2), the hot water tank of a storage-type service water heater shall be equipped with a pressure-relief valve
a) designed to open when the water pressure in the tank reaches the rated working pressure of the tank, and
b) so located that the pressure in the tank shall not exceed the pressure at the relief valve by more than 35 kPa under any condition of flow within the distribution system.
2) The hot water tank of a storage-type service water heater shall be equipped with a temperature-relief valve with a temperature-sensing element
a) located within the top 150 mm of the tank, and
b) designed to open and discharge sufficient water from the tank to keep the temperature of the water in the tank from exceeding $99^{\circ} \mathrm{C}$ under all operating conditions.
3) A pressure-relief valve and temperature-relief valve may be combined where Sentences (1) and (2) are complied with.
4) Indirect service water heaters shall be equipped with
a) a pressure-relief valve, and
b) a temperature-relief valve on every storage tank that forms part of the system.
5) Pipes that convey water from a temperature-relief, pressure-relief or combined temperature- and pressure-relief valve shall
a) be of a size at least equal to the size of the outlet of the valve,
b) be rigid, slope downward from the valve, and terminate with an indirect connection above a floor drain, sump, or other safe location, with an air break of not more than 300 mm ,
c) have no thread at its outlet, and
d) be capable of operating at a temperature of not less than $99^{\circ} \mathrm{C}$.
(See Note A-2.6.1.7.(5).)
6) The temperature-relief valve required in Clause (4)(b) shall
a) have a temperature-sensing element located within the top 150 mm of the tank, and
b) be designed to open and discharge sufficient water to keep the temperature of the water in the tank from exceeding $99^{\circ} \mathrm{C}$ under all operating conditions.
7) No shut-off valve shall be installed on the pipe between any tank and the relief valves or on the discharge lines from such relief valves.
8) A vacuum-relief valve shall be installed when any tank may be subject to back-siphonage.
9) Storage-type service water heaters that are located in a ceiling or roof space, or over a floor of wood construction, shall be installed within a corrosion-resistant watertight drain pan, as described in Sentence (10).
10) The drain pan referred to in Sentence (9) shall
a) be not less than 50 mm larger than the tank and have side walls not less than 25 mm high,
b) be drained by a pipe two sizes larger than the relief valve discharge pipe, and
c) have a drain that is located directly under the relief valve discharge pipe and that discharges directly to a floor drain or other acceptable location.

### 2.6.1.8. Solar Domestic Hot Water Systems

1) Systems for solar heating of potable water shall be installed in conformance with CAN/CSA-F383, "Installation of Packaged Solar Domestic Hot Water Systems."

### 2.6.1.9. Water Hammer

1) Provision shall be made to protect the water distribution system from the adverse effects of water hammer. (See Note A-2.6.1.9.(1).)

### 2.6.1.10. Mobile Home Water Service

1) A water service pipe intended to serve a mobile home shall
a) be not less than $3 / 4$ inch in size,
b) terminate above ground, and
c) be provided with
i) a tamperproof terminal connection that is capable of being repeatedly connected, disconnected and sealed,
ii) a protective concrete pad,
iii) a means to protect it from frost heave, and
iv) a curb stop and a means of draining that part of the pipe located above the frost line when not in use.

### 2.6.1.11. Thermal Expansion

1) Where thermal expansion can occur, protection shall be provided for
a) check valves required by Article 2.6.1.5.,
b) backflow preventers required by Sentence 2.6.2.1.(3), and
c) pressure-reducing valves required by Article 2.6.3.3.
(See Note A-2.6.1.11.(1).)

### 2.6.1.12. Service Water Heaters

1) Thermostat controls for electric storage-type service water heaters shall be set at a temperature of $60^{\circ} \mathrm{C}$. (See Note A-2.6.1.12.(1).)

### 2.6.2. Protection from Contamination

### 2.6.2.1. Connection of Systems

1) Except as provided in Sentence (2), connections to potable water systems shall be designed and installed so that non-potable water or substances that may render the water non-potable cannot enter the system.
2) A water treatment device or apparatus shall not be installed unless it can be demonstrated that the device or apparatus will not introduce substances into the system that may endanger health.
3) Backflow preventers shall be selected and installed in conformance with CSA B64.10, "Selection and Installation of Backflow Preventers." (See Note A-2.6.2.1.(3).)

### 2.6.2.2. Back-Siphonage

1) Potable water connections to fixtures, tanks, vats or other devices not subject to pressure above atmospheric and containing other than potable water shall be installed so as to prevent back-siphonage in conformance with Sentence (2).
2) Except as provided in Sentence 2.6.2.10.(2), back-siphonage shall be prevented by the installation of
a) an air gap,
b) an atmospheric vacuum breaker,
c) a pressure vacuum breaker,
d) a spill-resistant pressure vacuum breaker,
e) a hose connection vacuum breaker,
f) a dual check valve backflow preventer with atmospheric port,
g) a double check valve assembly,
h) a reduced pressure principle backflow preventer,
i) a dual check valve backflow preventer,
j) a laboratory faucet type vacuum breaker, or
k) a dual check valve backflow preventer with vent.

### 2.6.2.3. Backflow Caused by Back Pressure

1) Potable water connections to fixtures, tanks, vats, boilers or other devices containing other than potable water and subject to pressure above atmospheric shall be arranged to prevent backflow caused by back pressure in conformance with Sentences (2) and (3).
2) Except as provided in Article 2.6.2.4., backflow caused by back pressure of non-toxic substances into a potable water system shall be prevented by the installation of
a) an air gap,
b) a dual check valve backflow preventer with atmospheric port,
c) a dual check valve backflow preventer,
d) a dual check valve backflow preventer with vent,
e) a double check valve assembly, or
f) a reduced pressure principle backflow preventer.
3) Backflow caused by back pressure of toxic substances into a potable water system shall be prevented by the installation of
a) an air gap, or
b) a reduced pressure principle backflow preventer.

### 2.6.2.4. Backflow from Fire Protection Systems

1) A backflow preventer shall not be required in residential full flow-through fire sprinkler/standpipe systems in which the pipes and fittings are constructed of potable water system materials.
2) Except as required by Sentence (4), potable water system connections to fire sprinkler and standpipe systems shall be protected against backflow caused by back-siphonage or back pressure in conformance with Clauses (a) to (f):
a) residential partial flow-through fire sprinkler/standpipe systems in which the pipes and fittings are constructed of potable water system materials shall be protected by a dual check valve backflow preventer conforming to CSA B64.6.1, "Dual Check Valve Backflow Preventers for Fire Protection Systems (DuCF),"
b) Class 1 fire sprinkler/standpipe systems shall be protected by a single check valve backflow preventer conforming to CSA B64.9, "Single Check Valve Backflow Preventers for Fire Protection Systems (SCVAF)," provided that the systems do not use antifreeze or other additives of any kind and that all pipes and fittings are constructed of potable water system materials,
c) Class 1 fire sprinkler/standpipe systems not covered by Clause (b) as well as Class 2 and Class 3 fire sprinkler/standpipe systems shall be protected by a double check valve backflow preventer conforming to CSA B64.5.1, "Double Check Valve Backflow Preventers for Fire Protection Systems (DCVAF)," provided that the systems do not use antifreeze or other additives of any kind,
d) Class 1, Class 2 and Class 3 fire sprinkler/standpipe systems in which antifreeze or other additives are used shall be protected by a reduced pressure principle backflow preventer conforming to CSA B64.4.1, "Reduced Pressure Principle Backflow Preventers for Fire Protection Systems (RPF)," installed on the portion of the system that uses the additives and the balance of the system shall be protected as required by Clause (b) or (c),
e) Class 4 and Class 5 fire sprinkler/standpipe systems shall be protected by a reduced pressure principle backflow preventer conforming to CSA B64.4.1, "Reduced Pressure Principle Backflow Preventers for Fire Protection Systems (RPF)," or
f) Class 6 fire sprinkler/standpipe systems shall be protected
i) by a double check valve backflow preventer conforming to CSA B64.5.1, "Double Check Valve Backflow Preventers for Fire Protection Systems (DCVAF)," or
ii) where a potentially severe health hazard may be caused by backflow, by a reduced pressure principle backflow preventer conforming to CSA B64.4.1, "Reduced Pressure Principle Backflow Preventers for Fire Protection Systems (RPF)."
(See Note A-2.6.2.4.(2).)
3) Backflow preventers required by Sentence (2) shall be installed upstream of the fire department pumper connection. (See Note A-2.6.2.4.(3).)
4) Where a reduced pressure principle backflow preventer is required on a water service pipe at a fire service connection located on the same premises as the fire service pipe in Class 3, 4, 5 and 6 fire sprinkler/standpipe systems, a reduced pressure principle backflow preventer conforming to CSA B64.4.1, "Reduced Pressure Principle Backflow Preventers for Fire Protection Systems (RPF)," shall also be required on the fire service connection.

### 2.6.2.5. Separation of Water Supply Systems

1) No private water supply system shall be interconnected with a public water supply system.

### 2.6.2.6. Premise Isolation

1) In addition to the backflow preventer required by this Subsection for buildings or facilities where a potentially severe health hazard may be caused by backflow, the potable water system shall be provided with premise isolation by the installation of a reduced pressure principle backflow preventer. (See Note A-2.6.2.6.(1).)

### 2.6.2.7. Hose Bibb

1) Where a hose bibb is installed outside a building, inside a garage or in an area where there is an identifiable risk of contamination, the potable water system shall be protected against backflow through the hose bibb.

### 2.6.2.8. Cleaning of Systems

1) A newly installed part of a potable water system shall be cleaned and then flushed with potable water before the system is put into operation.

### 2.6.2.9. Air Gap

1) Air gaps shall not be located in a noxious environment.
2) Air gaps shall be not less than 25 mm high and at least twice the diameter of the opening of the water supply outlet in height. (See Note A-2.6.2.9.(2).)

### 2.6.2.10. Vacuum Breakers

1) Where the critical level is not marked on an atmospheric vacuum breaker, pressure vacuит breaker, or spill-resistant pressure vacuит breaker, the critical level shall be taken as the lowest point on the device.
2) Where an atmospheric vacuum breaker is installed, it shall be located on the downstream side of the fixture control valve or faucet so that it will be subject to water supply pressure
a) only when the valve or faucet is open, and
b) for periods of continuous use not exceeding 12 h .
(See Note A-2.6.2.10.(2).)
3) An atmospheric vacuum breaker shall be installed so that the critical level is at least the distance specified by the manufacturer at which the device will operate safely but not less than 25 mm above
a) the flood level rim of a fixture or tank, or
b) the highest point open to atmosphere in an irrigation system.
4) A pressure vacuum breaker or spill-resistant pressure vacuum breaker shall be installed so that the critical level is not less than 300 mm above
a) the flood level rim of a fixture or tank, or
b) the highest point open to atmosphere in an irrigation system.

### 2.6.2.11. Tank-Type Water Closets

1) Tank-type water closets shall be provided with a back-siphonage preventer in conformance with Sentence 2.2.10.10.(2).

### 2.6.2.12. Backflow Preventers

1) No bypass piping or other device capable of reducing the effectiveness of a backflow preventer shall be installed in a water supply system.

### 2.6.3. Size and Capacity of Pipes

(See Note A-2.6.3.)

### 2.6.3.1. Design, Fabrication and Installation

## (See Note A-2.6.3.1.)

1) Water distribution systems shall be designed to provide peak demand flow when the flow pressures at the supply openings conform to the plumbing supply fitting manufacturer's specifications.
2) Potable water systems shall be designed, fabricated and installed in accordance with good engineering practice, such as that described in the ASHRAE Handbooks and ASPE Data Books. (See Note A-2.6.3.1.(2).)
3) In one- and two-family dwelling units and manufactured homes, multi-purpose systems that combine potable water systems and residential fire sprinkler systems shall be designed, fabricated and installed in accordance with NFPA 13D, "Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes."

### 2.6.3.2. Hydraulic Load

1) Except as provided in Sentence (3), the hydraulic load of a fixture or device that is listed in Table 2.6.3.2.-A shall be the number of fixture units given in the Table.
2) Except as provided in Sentences (1) and (3), the hydraulic load of a fixture that is not listed in Table 2.6.3.2.-A is the number of fixture units listed in Table 2.6.3.2.-D.
3) Where fixtures are supplied with both hot and cold water, the hydraulic loads for maximum separate demands shall be $75 \%$ of the hydraulic load of the fixture units given in Tables 2.6.3.2.-A and 2.6.3.2.-D when using a detailed engineering design method.
4) The hydraulic load of urinals and water closets with direct flush valves shall be the number of fixture units listed in Tables 2.6.3.2.-B and 2.6.3.2.-C. (See Note A-2.6.3.2.(4).)

Table 2.6.3.2-A
Sizing of Water Distribution Systems ${ }^{(1)(2)}$
Forming Part of Sentences 2.6.3.2.(1), (2) and (3), and 2.6.3.4.(2), (3) and (5)

| Fixture or Device | Minimum Size of Supply Pipe, inches | Private Use Hydraulic Load, fixture units |  |  | Public Use Hydraulic Load, fixture units |  |  |

## Notes to Table 2.6.3.2.-A:

${ }^{(1)}$ The fixture unit values in this Table are not applicable in certain assembly occupancies because of surges in use by the occupants. For such occupancies, refer to specific design information.
(2) For fixtures not indicated in this Table, refer to Table 2.6.3.2.-D.
(3) Bathroom group is based on a $1 / 2$-inch size bathtub supply pipe.
(4) Add additional fixture to the fixture load for bathroom group.
(5) Refer to manufacturer's recommendations.
(6) For fixture unit values for fixtures with direct flush valves, see Sentence 2.6.3.2.(4) and Tables 2.6.3.2.-B and 2.6.3.2.-C.

Table 2.6.3.2.-B
Sizing of Water Distribution Systems for Urinals with Direct Flush Valves Forming Part of Sentences 2.6.3.2.(4) and 2.6.3.4.(5)

Table 2.6.3.2.-D
Hydraulic Loads of Fixtures Not Listed in Table 2.6.3.2.A.
Forming Part of Sentences 2.6.3.2.(2) and (3) and 2.6.3.4.(5)

| Size of Supply Pipe, inches | Hydraulic Load, fixture units |  |
| :---: | :---: | :---: |
|  | Private Use | Public Use |
| $3 / 8$ | 1 | 2 |
| $1 / 2$ | 2 | 4 |
| $3 / 4$ | 3 | 6 |
| 1 | 6 | 10 |

### 2.6.3.3. Static Pressure

1) Where the static pressure at any fixture may exceed 550 kPa , a pressure-reducing valve shall be installed to limit the maximum static pressure at the fixture to 550 kPa .

### 2.6.3.4. Size

1) Water service pipes shall be sized according to the peak demand flow but shall not be less than $3 / 4$ inch size.
2) Except as provided in Sentence (3), the size of a supply pipe that serves a fixture shall conform to Table 2.6.3.2.-A.
3) For fixtures listed in Table 2.6.3.2.-A that are permitted to have a supply pipe $3 / 8$ inch in size, a connector not more than 750 mm long and not less than 6.3 mm inside diameter may be used to supply water to the fixture.
4) No water system between the point of connection with the water service pipe or the water meter and the first branch that supplies a water heater that serves more than one fixture shall be sized less than $3 / 4$ inch.
5) Where both hot and cold water is supplied to fixtures in residential buildings containing one or two dwelling units or row houses with separate water service pipes, the water system may be sized in accordance with Table 2.6.3.4., where
a) the hydraulic loads for maximum separate demands on water distribution system piping are not less than $100 \%$ of the total hydraulic load of the fixture units given in Table 2.6.3.2.-A, 2.6.3.2.-B, 2.6.3.2.-C or 2.6.3.2.-D for private use,
b) the minimum water pressure at the entry to the building is 200 kPa , and
c) the total maximum length of water system is 90 m .
(See Note A-2.6.3.4.(5).)

Table 2.6.3.4.
Water Pipe Sizing for Buildings Containing One or Two Dwelling Units or Row Houses with Separate Water Service Pipes Forming Part of Sentence 2.6.3.4.(5)

| Size of Water Pipe, inches | Water Velocity, m/s ${ }^{(1)}$ |  |  |
| :---: | :---: | :---: | :---: |
|  | Hydraulic Load, fixture units |  |  |
|  | 1.5 |  |  |
| $1 / 2$ | 8 | 7 | 4 |
| $3 / 4$ | 21 | 16 | 9 |
| 1 | 43 | 31 | 18 |
| $11 / 4$ | 83 | 57 | 30 |

## Notes to Table 2.6.3.4.:

${ }^{(1)}$ Table 2.6.3.4. is not intended to limit water velocities that are permitted by Sentence 2.6.3.5.(1).

### 2.6.3.5. Velocity

1) The maximum permitted water velocities shall be those recommended by the pipe and fitting manufacturer.

## Section 2.7. Non-Potable Water Systems

### 2.7.1. Connection

### 2.7.1.1. Not Permitted

1) A non-potable water system shall not be connected to a potable water system.

### 2.7.2. Identification

### 2.7.2.1. <br> Markings Required

1) Non-potable water piping shall be identified by markings that are permanent, distinct and easily recognized.

### 2.7.3. Location

### 2.7.3.1. <br> Pipes

1) Non-potable water piping shall not be located
a) where food is prepared in a food-processing plant,
b) above food-handling equipment,
c) above a non-pressurized potable water tank, or
d) above a cover of a pressurized potable water tank.

### 2.7.3.2. Outlets

1) An outlet from a non-potable water system shall not be located where it can discharge into
a) a sink or lavatory,
b) a fixture into which an outlet from a potable water system is discharged, or
c) a fixture that is used for the preparation, handling or dispensing of food, drink or products that are intended for human consumption.
(See Note A-2.7.3.2.(1).)

### 2.7.4. Non-potable Water Systems

### 2.7.4.1. Non-potable Water System Design

(See Note A-2.7.4.1.)

1) Except as provided in Sentence (2), non-potable water systems shall be designed, fabricated and installed in accordance with good engineering practice, such as that described in the ASHRAE Handbooks, ASPE Handbooks and CAN/CSA-B128.1, "Design and Installation of Non-Potable Water Systems."
2) Non-potable water systems shall only be used to supply water closets, urinals, and directly connected underground irrigation systems that only dispense water below the surface of the ground.

## Section 2.8. Objectives and Functional Statements

### 2.8.1. Objectives and Functional Statements

### 2.8.1.1.

## Attribution to Acceptable Solutions

1) For the purposes of compliance with this Code as required in Clause 1.2.1.1.(1)(b) of Division A, the objectives and functional statements attributed to the acceptable solutions in this Part shall be the objectives and functional statements listed in Table 2.8.1.1. (See Note A-1.1.2.1.(1).)

Table 2.8.1.1.
Objectives and Functional Statements Attributed to the Acceptable Solutions in Part 2
Forming Part of Sentence 2.8.1.1.(1)

2.3.2.1. Caulked Lead Drainage Joints
(1) [F80-OH2.1,OH2.3]
(2) $[\mathrm{F} 80-\mathrm{OH} 2.1]$
(3) [F81-OH2.1]
(4) [F81-OH2.1]
2.3.2.2. Wiped Joints
(1) [F80,F81-OH2.1]
[F80,F81-OP5]
(2) [F80,F81-OH2.1,OH2.2,OH2.3]
(3) [F80,F81-OH2.1,OH2.2,OH2.3]

### 2.3.2.3. Screwed Joints

| (1) | [F80,F81-OH2.1,OH2.2,OH2.3] |
| :--- | :--- |
| $(2)$ | $[F 70-\mathrm{OH} 2.2]$ |

(2) [F70-OH2.2]
2.3.2.4. Soldered Joints
(1) [F20,F81-OH2.1,OH2.2,OH2.3]
2.3.2.5. Flared Joints
(1) [F20,F81-OH2.1,OH2.2,OH2.3]
[F20,F81-OP5]
(2) [F20,F81-OH2.1,OH2.2,OH2.3]
[F20,F81-OP5]
2.3.2.6. Mechanical Joints
(1) [F2O-OH2.1,OH2.2,OH2.3]
[F20-OP5]
2.3.2.7. Cold-Caulked Joints
(1) [F20,F81-OH1.1] Applies to bell and spigot joints in venting systems.
[F20,F81-OH2.1,OH2.3] Applies to bell and spigot joints in drainage systems or venting systems.
[F20,F81-OP5]
(2) [F20,F81-OH1.1]
[F20,F81-OP5]
[F20,F81-OH2.1,OH2.2,OH2.3]

## Table 2.8.1.1. (Continued)

Functional Statements and Objectives ${ }^{(1)}$
(3) $\quad$ [F20-OH2.1,OH2.3]

### 2.3.2.8. Stainless Steel Welded Joints

(1) $[\mathrm{F} 20, \mathrm{~F} 81-\mathrm{OH} 2.1, \mathrm{OH} 2.2, \mathrm{OH} 2.3]$
(2) [F20,F81-OH2.1,OH2.2,OH2.3]
2.3.3.1. Drilled and Tapped Joints
(1) [F81-OH1.1]
[F20,F81-OH2.2,OH2.3]
2.3.3.2. Extracted Tees
(1) $[\mathrm{F} 81-\mathrm{OH} 2.1, \mathrm{OH} 2.3]$
[F20-OP5]
2.3.3.3. Prohibition of Welding of Pipes and Fittings
(1) [F20-OH1.1]

|  | [F20-OH2.1,OH2.2,OH2.3] |
| :--- | :--- |
| $(2)$ | $[$ F80-OH2.2] |
|  | $[\mathrm{F} 80-\mathrm{OP} 5]$ |

2.3.3.4. Unions and Slip Joints

| $(1)$ | $[\mathrm{F} 81-\mathrm{OH} 1.1]$ |
| :--- | :--- |
|  | $[\mathrm{F} 81-\mathrm{OH} 2.1, \mathrm{OH} 2.3]$ |
|  | $[\mathrm{F} 81-\mathrm{OH} 1.1]$ |
|  | $[\mathrm{F} 81-\mathrm{OH} 2.1, \mathrm{OH} 2.3]$ |
| 2 2.3.3.5. Increaser or Reducer |  |
| $(1)$ | $[\mathrm{F} 81-\mathrm{OH} 1.1]$ |
|  | $[\mathrm{F} 70, \mathrm{~F} 80-\mathrm{OH} 2.2]$ |

## Notes to Table 2.8.1.1.:

(1) See Parts 2 and 3 of Division A.

## Division B

## Notes to Part 2 <br> Plumbing Systems

A-2.1.2.1.(2) Combined Building Drains. Combined building drains may have proven acceptable on the basis of past performance in some localities and their acceptance under this Code may be warranted.

A-2.1.2.4.(1) Service Piping. The layout as shown in Figure A-2.1.2.4.(1)(c) may require special legal arrangements in some jurisdictions to ensure that access can be provided to all parts of the service pipes.

These Notes are included for explanatory purposes only and do not form part of the requirements. The number that introduces each Note corresponds to the applicable requirement in this Part.
The figures are schematic only; they depict various parts of the plumbing system but do not include details. For an explanation of the symbols and abbreviations used in the figures, refer to the list provided at the end of the Code.

## A-2.1.2.4.(1)

Figure A-2.1.2.4.(1)

## Service Piping

## A-2.2.2.3.(3) Shower Drainage (Plan View).

Figure A-2.2.2.3.(3)
Shower Drainage (Plan View)

A-2.2.2.4.(1) Concealed Overflows. The use of concealed overflows does not preclude the use of a standing waste.

## A-2.2.3.1.(1) and (3) Trap Seal Depth and Trap Connections.

Figure A-2.2.3.1.(1) and (3)
Trap Seal Depth and Trap Connections

A-2.2.3.1.(4) Prohibited Traps. Except for an S-trap standard, the $S$ trap shown in Figure A-2.2.3.1.(4)(b) is prohibited by Clause 2.5.6.3.(1)(b), which limits the fall on fixture drains. Crown vented traps shown in Figure A-2.2.3.1.(4)(c) are prohibited by Clause 2.5.6.3.(1)(a), which requires that the distance from the trap weir to the vent be not less than twice the size of the fixture drain.

Figure A-2.2.3.1.(4)
Prohibited Traps

A-2.2.3.2.(3) Grease Interceptors. CSA B481.4, "Maintenance of Grease Interceptors," is considered to represent good practice regarding procedures for the maintenance of grease interceptors.

A-2.2.4.1. T Fittings in Drainage Systems. The use of a cross fitting in a drainage system is prohibited, but such fitting may be used in a venting system to connect 4 vent pipes. In a drainage system, a T fitting can only be used as shown in Figure A-2.2.4.1.(a), and cannot be used as shown in Figure A-2.2.4.1.(b) because the T or cross fitting would change the direction of flow in the drainage system.

Figure A-2.2.4.1.
T Fittings in Drainage Systems

A-2.2.4.2. Sanitary T Fittings in Drainage Systems. A sanitary T fitting may be used to change the direction of flow in a drainage system from horizontal to vertical, but may not be used to change the direction of flow in a nominally horizontal drainage system. A combination $Y$ and $1 / 8$ th bend fitting may also be used as shown in Figure A-2.2.4.2.(b).

Figure A-2.2.4.2.
Sanitary T Fittings in Drainage Systems

## A-2.2.5., 2.2.6. and 2.2.7. Pipe and Fitting Applications.

Table A-2.2.5., 2.2.6. and 2.2.7.
Table A-2.2.5., 2.2.6. and 2.2.7.
Summary of Pipe and Fitting Applications
Forming Part of Note A-2.2.5., 2.2.6. and 2.2.7.

Table A-2.2.5., 2.2.6. and 2.2.7. (Continued)
Notes to Table A-2.2.5., 2.2.6. and 2.2.7.:
(1) Where fire stops are pierced by pipes, the integrity of the fire stop must be maintained.
(2) Gasketted joints required.
(3) Permitted only for water service pipe.
(4) Combustible piping in noncombustible construction is subject to the requirements of Sentence 3.1.5.19.(1) of Division B of the NBC.
(5) Combustible piping that penetrates a fire separation is subject to the requirements in Articles 3.1.9.1., 9.10.9.6. and 9.10.9.7. of Division B of the NBC.
(6) Not permitted in hot water systems.
(7) Not to exceed design temperature and design pressure stated in Sentence 2.2.5.7.(2).
(8) Permitted only in buildings of industrial occupancy as described in the NBC, or for the repair of existing galvanized steel piping systems.
(9) Permitted underground only in a storm drainage system.
(10) Permitted only for an external leader.
(11) Not permitted for the fixture drain or vent below the flood level rim of a flush-valve-operated urinal.

A-2.2.5.1.(3) Concrete Fittings. Concrete fittings fabricated on the site from lengths of pipe may have proven acceptable on the basis of past performance in some localities and their acceptance under this Code may be warranted.

A-2.2.5.4.(1) Polyethylene Pipe Used Underground. Joints within the high-density polyethylene pipe (HDPE) shall be heat-fused according to the manufacturer's instructions. Joints between HDPE pipes and other materials shall be made with a suitable hubless coupling.

A-2.2.5.5.(1) Crosslinked Polyethylene Pipe and Fittings. There are some special installation requirements for the use of crosslinked polyethylene pipe and its associated fittings. Reference should, therefore, be made to the installation information in CSA B137.5, "Crosslinked Polyethylene (PEX) Tubing Systems for Pressure Applications."

A-2.2.5.8. to 2.2.5.10. Solvent Cement. CSA B137.6, "Chlorinated Polyvinylchloride (CPVC) Pipe, Tubing, and Fittings for Hot- and Cold-Water Distribution Systems," CAN/CSA-B181.1, "Acrylonitrile-Butadiene-Styrene (ABS) Drain, Waste, and Vent Pipe and Pipe Fittings," and CAN/CSA-B181.2, "Polyvinylchloride (PVC) and Chlorinated Polyvinylchloride (CPVC) Drain, Waste, and Vent Pipe and Pipe Fittings," reference ASTM D 3138, "Solvent Cements for Transition Joints Between Acrylonitrile-Butadiene-Styrene (ABS) and Poly(Vinyl Chloride) (PVC) Non-Pressure Piping Components," which specifies the colour of the solvent cement. PVC cement shall be grey, ABS cement shall be yellow, CPVC cement shall be clear and transition cement shall be white. The standard colour allows Code users to readily determine if the correct solvent cement has been used. It should be noted that a transition cement is not an all-purpose cement.

A-2.2.5.11.(1) Polyethylene/Aluminum/Polyethylene Composite Pipe and Fittings. There are some special installation requirements for the use of polyethylene/aluminum/polyethylene composite pipe and fittings. Reference should, therefore, be made to the installation information in CSA B137.9, "Polyethylene/Aluminum/Polyethylene (PE-AL-PE) Composite Pressure-Pipe Systems."

## A-2.2.5.12.(1) Crosslinked Polyethylene/Aluminum/Crosslinked Polyethylene Composite

 Pressure Pipe and Fittings. There are some special installation requirements for the use of crosslinked polyethylene/aluminum/crosslinked polyethylene composite pipe and fittings. Reference should, therefore, be made to the installation information in CSA B137.10, "Crosslinked Polyethylene/Aluminum/Crosslinked Polyethylene (PEX-AL-PEX) Composite Pressure-Pipe Systems."A-2.2.5.13.(1) Polypropylene Pipe and Fittings. There are some special installation requirements for the use of polypropylene pipe and fittings. Reference should, therefore, be made to the installation information in CSA B137.11, "Polypropylene (PP-R) Pipe and Fittings for Pressure Applications."

A-2.2.6.7.(3) Galvanized Steel Pipe. The use of galvanized steel pipe and fittings in a water distribution system may have proven acceptable on the basis of past performance in some localities and its acceptance under this Code may be warranted.

A-2.2.10.5.(1) Saddle Hubs or Fittings. Saddle hubs or fittings may have proven acceptable on the basis of past performance in some localities and their acceptance under this Code may be warranted.

A-2.2.10.6.(2) Supply Fittings and Individual Shower Heads. Flow restriction devices within supply fittings should not be removed.

Due to the low flow rate of public lavatory faucets, design consideration should be given to the wait time for hot water to be delivered to each fixture.

A-2.2.10.6.(3) Automatic Compensating Valves. When replacing a shower head, the appropriate shower valve with a suitable compensating feature matching the flow rate should be chosen to decrease the possibility that users will suffer thermal shock. The water flow rate of automatic compensating mixing valves can be found in ASSE 1016/ASME 112.1016/CSA B125.16, "Performance Requirements for Automatic Compensating Valves for Individual Showers and Tub/Shower Combinations."

A-2.2.10.6.(4) and (5) Automatic Shut-off of Water Flow. Examples of water shut-off devices include occupant sensors and self-closing valves.

A-2.2.10.7. Hot Water Temperature. Hot water delivered at $60^{\circ} \mathrm{C}$ will severely burn human skin in 1 to 5 seconds. At $49^{\circ} \mathrm{C}$, the time for a full thickness scald burn to occur is 10 minutes. Children, the elderly and persons with disabilities are particularly at risk of scald burns. Compliance with Article 2.2.10.7. will reduce the risk of scalding in showers and bathtubs, and reduce the risk of thermal shock from wall-mounted shower heads.

These requirements apply to all occupancies, not just residential occupancies.
The water outlet temperature at other fixtures, such as lavatories, sinks, laundry trays or bidets, is not addressed by Article 2.2.10.7., but a scald risk may exist at such fixtures nonetheless.

A-2.2.10.9.(3) Bubblers. Bubblers installed on other than drinking fountains may have proven acceptable on the basis of past performance in some localities and their acceptance under this Code may be warranted.

A-2.2.10.16.(1) Air Admittance Valve. An air admittance valve is a device that is closed by gravity and seals the vent terminal at zero differential pressure (no flow conditions) and under positive internal pressures. The valve allows air to enter the drainage system without the use of a vent extended to outside air and prevents trap siphonage.

The material of the diaphragm can be damaged by exposure to acidic or corrosive fumes in the ambient atmosphere; therefore, air admittance valves should not be installed in locations where there is a potential for exposure to such fumes.

A-2.3.2.6.(1) Mechanical Joints. Storm sewer blockage can cause mechanical joints at the base of leaders to fail, which results in flooding. The failure occurs because the cleanout joints at the base of the rainwater leaders are not able to withstand the water column pressure. To avoid such failures, it is necessary to ensure that storm water systems installed using mechanical joints be braced and/or restrained at the ends of branches, changes in direction and elevation, at dead ends and at other locations as required by the manufacturer to prevent the separation of joints due to internal pressure, mechanical stress or seismic events. Care should be taken to replace cleanouts properly after maintenance or testing.

## A-2.3.3.9. Linear Expansion.

Figure A-2.3.3.9.
Linear Expansion

Example: To determine the expansion of 20 m of ABS pipe for a temperature change from $10^{\circ} \mathrm{C}$ to $60^{\circ} \mathrm{C}$. Temperature change $=60-10=50^{\circ} \mathrm{C}$,
Enter the chart at $50^{\circ} \mathrm{C}$, read up to ABS line, and then across to the mm scale $=47 \mathrm{~mm} / 10 \mathrm{~m}$ of pipe,
$\therefore$ change in length of 20 m of pipe $=$

$$
\frac{20}{10} \times 47=94 \mathrm{~mm}
$$

A-2.3.3.9.(1) Expansion and Contraction. Expansion and contraction in piping systems may be accommodated in a number of ways including, but not limited to, piping design and layout, material selection, and the inclusion of expansion joints.

## A-2.3.3.11.(2) Air Break.

Figure A-2.3.3.11.(2)

## Air Break

A-2.3.4.6.(1) Support for Underground Piping. See explanation for Subsection 2.3.5. for additional protection required for underground pipes. Permitted installations are shown in Figure A-2.3.4.6.(1)(a). The methods of support shown in Figure A-2.3.4.6.(1)(b) are not permitted because the base does not provide firm and continuous support for the pipe.

Figure A-2.3.4.6.(1)
Support for Underground Piping

A-2.3.5.1.(1)(a) Backfilling of Pipe Trench. Stronger pipes may be required in deep fill or under driveways, parking lots, etc., and compaction for the full depth of the trench may be necessary.

Figure A-2.3.5.1.(1)(a)

## Backfilling of Pipe Trench

A-2.3.5.3. Protection of Piping Against Freezing. The TIAC "Mechanical Insulation Best Practices Guide" is a comprehensive source of information on the selection, installation and proper use of thermal insulation materials. (Note that Section 4 of this Guide is not included in the scope of this Note as it contains information on proprietary products, which are not within the mandate of the Code.)

A-2.3.7.2.(2) Pressure-Testing of Potable Water Systems. The plastic piping manufacturer should be consulted to determine the appropriateness of using air to pressure-test the piping system.

A-2.4.2.1.(1)(a)(ii) and (e)(vi) Indirect Connections. See Sentence 2.4.5.1.(4) for trapping requirements for indirectly connected fixtures.
See Sentence 2.4.7.1.(9) for cleanouts on drip pipes for food receptacles or display cases.

Figure A-2.4.2.1.(1)(a)(ii) and (e)(vi)
Indirect Connections

## A-2.4.2.1.(2) Soil-or-Waste Pipe Connections.

Figure A-2.4.2.1.(2)

## Soil-or-Waste Pipe Connections

A-2.4.2.1.(4) Suds Pressure Zones. High sudsing detergents used in clothes washers produce suds that tend to disrupt the venting action of venting systems and can also spread through the lower portions of multi-storey drainage systems. The more turbulence, the greater the suds. One solution that avoids the creation of suds pressure zones involves connecting the suds-producing stack downstream of all other stacks and increasing the size of the horizontal building drain to achieve a greater flow of air and water. Using streamlined fittings, such as wyes, tends to reduce suds formation. Check valves or backwater valves in fixture outlet pipes have also been used to correct problem installations.

Figure A-2.4.2.1.(4)
Suds Pressure Zones

A-2.4.3.3.(1) Waste with Organic Solids. Equipment such as garbage grinders and potato peelers produces waste with organic solids. These devices reduce most waste into small-sized particles that will flow easily through the drainage system. However, if they are located upstream of the interceptor, the particles could block the interceptor.

A-2.4.4.3.(1) Grease Interceptors. Grease interceptors may be required when it is considered that the discharge of fats, oil or grease may impair the drainage system. Information on the design and sizing of grease interceptors can be found in ASPE 2012, "Plumbing Engineering Design Handbook, Volume 4, Chapter 8, Grease Interceptors."

A-2.4.4.4.(1) Bio-hazardous Waste. Chemically loaded and bio-hazardous wastes can be dangerous to private or public sewer systems and hazardous to people. The treatment of corrosive and acid waste is mandated by this Code. The treatment of chemically loaded effluents is usually regulated by sewage collecting and treatment authorities. The treatment of bio-hazardous waste should follow "good engineering practice," such as that described in Laboratory Biosafety Guidelines published by Health Canada. It should be noted that bio-hazardous waste disposal systems require specific engineering expertise and remain outside the scope of this Code.

## A-2.4.5.1.(2) Trapping of Sinks and Laundry Trays.

Figure A-2.4.5.1.(2)
Trapping of Sinks and Laundry Trays
Notes to Figure A-2.4.5.1.(2):
(1) See Sentence 2.4.9.3.(2).
(2) The developed length of the fixture outlet pipe shall not exceed 1200 mm . See Article 2.4.8.2.

## A-2.4.5.1.(3) Single Traps for Fixture Groups.

Figure A-2.4.5.1.(3)
Single Traps for Fixture Groups

A-2.4.5.1.(5) Location of Trap or Interceptor. An interceptor that replaces a trap must be vented in the same way as the trap it replaces. (See Note A-2.4.2.1.(1)(a)(ii) and (e)(vi).) Where an interceptor other than an oil interceptor serves a group of fixtures requiring more than one trap, each fixture must be properly trapped and vented. (See Article 2.5.5.2. for venting of oil interceptors.)

Figure A-2.4.5.1.(5)
Location of Trap or Interceptor

A-2.4.5.2.(1) Untrapped Leader. When an untrapped leader drains to a combined building sewer, clearance requirements are the same as for vent terminals. (See also Note A-2.5.6.5.(4).)

A-2.4.5.3.(1) Subsoil Drainage Connections. This Code does not regulate the installation of subsoil drainage pipes, but does regulate the connection of such pipes to the plumbing system. The intent of this Article is to place a trap between the subsoil drainage pipe and the sanitary drainage system. The cleanout must be installed in accordance with Sentence 2.4.7.1.(2). A trap or sump may be provided specifically for the subsoil drains, or advantage may be taken of the trap of a floor drain or storm water sump as shown in Figure A-2.4.5.3.(1).

Figure A-2.4.5.3.(1)
Subsoil Drainage Connections

## A-2.4.5.4.(1) Location of Building Traps.

Figure A-2.4.5.4.(1)

## Location of Building Traps

A-2.4.5.5.(1) Maintaining Trap Seals. Periodic manual replenishment of the water in a trap is considered to be an equally effective means of maintaining the trap seal in floor drains in residences. Under pressure differential conditions, special measures are necessary to maintain trap seals.

Figure A-2.4.5.5.(1)
Maintaining Trap Seals

A-2.4.6.3. Arrangement of Piping at Sump. In most installations, controls will be installed in conjunction with a float to automatically empty the sump. If such controls are not provided, the capacity of the sump should equal the maximum inflow to the sump that is expected to occur during any 24 h period.

Figure A-2.4.6.3.

## Arrangement of Piping at Sump

A-2.4.6.4.(1) Backwater Valve or Gate Valve. The installation of a backwater valve or a gate valve in a building drain or in a building sewer may have proven acceptable on the basis of past performance in some localities, and their acceptance under this Code may be warranted.

A-2.4.6.4.(6) Protection from Backflow Caused by Surcharge. These requirements are intended to apply when in the opinion of the authority having jurisdiction there is danger of backup from a public sewer.

Figure A-2.4.6.4.(6)
Protection from Backflow Caused by Surcharge

A-2.4.7.1.(6) Cleanouts for Drainage Systems. To accommodate the limitations of sewer cleaning equipment, the cleanout should be located as close as possible to the exterior wall of the building, either inside or outside, and be accessible for sewer cleaning equipment.

## A-2.4.7.1.(9) Cleanouts for Food Receptacle Drip Pipes.

Figure A-2.4.7.1.(9)
Cleanouts for Food Receptacle Drip Pipes
Note to Figure A-2.4.7.1.(9):
(1) See Article 2.4.2.1.

A-2.4.7.1.(10) Cleanouts for Fixture Drains. A trap cleanout plug cannot be used as a cleanout for a fixture drain.

A-2.4.8.1.(1) Minimum Slope. Although slopes below 1 in 100 are permitted for pipes over 4 inches, they should be used only where necessary. Steeper slopes and higher velocities will help to keep pipes clean by moving heavier solids that might tend to clog the pipes.

## A-2.4.8.2.(1) Island Fixture Installation.

Figure A-2.4.8.2.(1)
Island Fixture Installation ${ }^{(3)}$
Notes to Figure A-2.4.8.2.(1):
(1) Vent size to be in accordance with Article 2.5.6.3.
(2) Length of A depends on trap size. Fall cannot exceed size.
(3) See also Article 2.5.1.1.

A-Table 2.4.9.3. Hydraulic Loads for Laundry Traps and Floor Drains. When determining the hydraulic load on a pipe, no allowance need be made for a load from a domestic clothes washer when discharged to a laundry tray since the hydraulic load from the laundry tray is sufficient. Also no hydraulic load is required from a floor drain in a washroom since it is for emergency use only.

A-2.4.9.3.(2) Continuous Wastes. Fixture outlet pipes that are common to 2 or 3 compartments or fixtures are sometimes referred to as continuous wastes and are not considered to be branches. (See also Note A-2.4.5.1.(2).)

## A-2.4.9.3.(3) Standpipe Illustration.

Figure A-2.4.9.3.(3)
Standpipe Installation for Clothes Washers

## A-2.4.10. Determination of Hydraulic Loads and Drainage Pipe Sizes.

## Hydraulic Loads

The hydraulic load that is imposed by a fixture is represented by a factor called a fixture unit. Fixture units are dimensionless and take into account the rate of discharge, time of discharge and frequency of discharge of the fixture.
Confusion often arises when attempts are made to convert fixture units to litres per second because there is no straightforward relationship between the two. The proportion of the total number of fixtures that can be expected to discharge simultaneously in a large system is smaller than in a small system. For example, doubling the number of fixtures in a system will not double the peak flow that the system must carry, although of course the flow will be increased somewhat. Figure A-2.4.10.-A shows the relationship that was used in constructing the tables of capacities of stacks, branches, sanitary building drains and sanitary building sewers (Tables 2.4.10.6.-A to 2.4.10.6.-C).
Although the curve in Figure A-2.4.10.-A was used to prepare the Code tables, it was not included in the National Plumbing Code. Instead, a single approximate conversion factor is given in the Code so that a continuous flow from a fixture may be converted from litres per second to fixture units in order to determine the total hydraulic load on the sanitary drainage system. The conversion factor, which is given in Sentence 2.4.10.3.(1), is 31.7 fixture units per litres per second. The discharge from a continuous flow fixture in litres per second when multiplied by 31.7 gives the hydraulic load in fixture units, and that load is added to the fixture unit load from other fixtures to give the total load that the sanitary drainage pipe must carry.

The hydraulic load that is produced by storm water runoff depends both on the size of the area that is drained and local rainfall intensity. The capacities of storm drainage pipes and combined sewers in Tables 2.4.10.9., 2.4.10.10. and 2.4.10.11. have been expressed in terms of the number of litres that they can carry when the local rainfall intensity is 1 mm in 15 min . The hydraulic load for a particular location is obtained by simply multiplying the rainfall intensity figure given in Appendix C of Division B of the NBC by the actual area drained as specified in Sentence 2.4.10.4.(1).

Figure A-2.4.10.-A
Relationship between Fixture Units and Demand

In the case of restricted-flow drains, the hydraulic load from storm water runoff must be calculated using manufacturer discharge flow rates of specific drains in the case of roofs, and water-flow restrictors in the case of paved areas.
When plumbing fixtures are connected to a combined sewer, the hydraulic load from the fixtures must be converted from fixture units to litres or, in the case of continuous flow, from litres per second to litres so that these loads can be added to the hydraulic loads from roofs and paved surfaces. As already pointed out, the relationship between fixture units and litres per second and, consequently, the relationship between fixture units and litres is not straightforward, and an approximate conversion factor has been adopted. The conversion factor given in Sentence 2.4.10.5.(1) is $9.1 \mathrm{~L} /$ fixture unit, except where the load is less than 260 fixture units in which case a round figure of 2360 L is to be used. In the case of continuous-flow fixtures that are connected to combined sewers or storm sewers, the conversion factor given in Sentence 2.4.10.3.(2) is 900 L per $\mathrm{L} / \mathrm{s}$. This conversion factor is not an approximation but an exact calculation.
The conversion factors given in Sentences 2.4.10.3.(1) and 2.4.10.5.(1) are designed to convert in one direction only, and must not be used to convert from fixture units to litres per second in the one instance, nor from litres to fixture units in the other instance.

In summary, it should be noted that
(a) in sanitary drainage systems, all hydraulic loads are converted to fixture units, and
(b) in storm drainage systems or combined drainage systems, all hydraulic loads are converted to litres.

## Procedure for Selecting Pipe Sizes

The following is an outline, with examples, of the procedures to be followed in determining the size of each section of drainage piping.
(1) Sanitary drainage pipes, such as branches, stacks, building drains or building sewers:
(a) Determine the load in fixture units from all fixtures except continuous-flow fixtures;
(b) Determine the load in litres per second from all continuous-flow fixtures and multiply the number of litres per second by 31.7 to obtain the number of fixture units;
(c) Add loads (a) and (b) to obtain the total hydraulic load on the pipe in fixture units; and
(d) Consult the appropriate table from Table 2.4.10.6.-A, 2.4.10.6.-B or 2.4.10.6.-C to select the pipe size.
(Note that no pipe size may be smaller than that permitted in Subsection 2.4.9.)
(2) Storm drainage pipes, such as gutters, leaders, horizontal pipes, building drains or building sewers:
(a) Determine the area in square metres of roofs and paved surfaces according to Sentence 2.4.10.4.(1);
(b) Determine the local rainfall intensity ( 15 min rainfall) from Appendix C of Division B of the NBC;
(c) Multiply (a) by (b) to obtain the hydraulic load in litres;
(d) If a fixture discharges a continuous flow to the storm system, multiply its load in litres per second by 900 to obtain the hydraulic load in litres;
(e) If flow control roof drains are used, compute the discharge rate based on rain intensity, retention duration, accumulation height and roof area from the roof drain manufacturers' data;
(f) Add loads (c) or (e), and (d) to obtain the total hydraulic load on the pipe in litres; and
(g) Consult the appropriate table from Table 2.4.10.9., 2.4.10.10. or 2.4.10.11. to select the pipe or gutter size.
(Note that no pipe may be smaller than that permitted in Subsection 2.4.9.)
(3) Combined drainage pipes, such as building sewers:
(a) Determine the total load in fixture units from all fixtures except continuous-flow fixtures;
(b) If the fixture unit load exceeds 260, multiply it by 9.1 to determine the equivalent hydraulic load in litres. If the fixture unit load is 260 or fewer fixture units, the hydraulic load is 2360 L ;
(c) Obtain the hydraulic load from roofs and paved surfaces in the same manner as for storm drains (see 2(a), (b), (c) and (e));
(d) Obtain the hydraulic load in litres from any continuous-flow source that is connected to the sanitary or storm drainage system in the same manner as for storm drainage pipes (see 2(d));
(e) Add hydraulic loads (b), (c) and (d) to obtain the total hydraulic load on the pipe in litres; and
(f) Consult Table 2.4.10.9. to select the pipe size.
(Note that no pipe may be smaller than that permitted in Subsection 2.4.9.)

## Examples

Example 1: Determination of the size of storm drainage components for the building shown in Figures A-2.4.10.-B and A-2.4.10.-C

Step No. 1: Determine the hydraulic load from the roofs.

| Area drained by gutter | $=162 \mathrm{~m}^{2}$ |
| :---: | :---: |
| Area drained by roof drain | $=230.4 \mathrm{~m}^{2}$ |
| If the local rainfall intensity is 25 mm : |  |
| the load on the gutter (leader No. 2) is ( $25 \times 162$ ) | $=4050 \mathrm{~L}$ |
| the load on the roof drain (leader No. 1) is ( $25 \times 230.4$ ) | $=5760 \mathrm{~L}$ |
| If the local rainfall intensity is 15 mm : |  |
| the load on the gutter (leader No. 2) is ( $15 \times 162$ ) | $=2430 \mathrm{~L}$ |
| the load on the roof drain (leader No. 1) is ( $15 \times 230.4$ ) | $=3456 \mathrm{~L}$ |

Step No. 2: Determine the size of storm drainage components.
Using the appropriate hydraulic loads, the size of storm drainage components can be determined from Tables 2.4.10.9., 2.4.10.10. and 2.4.10.11. These values are tabulated in Table A-2.4.10. for rainfall intensities of 25 mm and 15 mm in 15 min .

Figure A-2.4.10.-B

## Storm Drainage Areas (Example 1)

Figure A-2.4.10.-C

## Storm Drainage Components (Example 1) (Elevation View)

Table A-2.4.10.
Storm Drainage Pipe Sizes (Example 1)
Forming Part of Note A-2.4.10.

|  | Area Drained, $\mathrm{m}^{2}$ | 15-min Rainfall Intensity, mm |  |  |  | NPC Reference Table No. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 25 |  | 15 |  |  |
|  |  | Hydraulic Load, L | Size, inches | Hydraulic Load, L | Size, inches |  |
| Roof drain leader | 230.4 | 5760 | 4 | 3456 | 3 | 2.4.10.11. |
| Gutter | 162 | 4050 | 8 | 2430 | 7 | 2.4.10.10. |
| Gutter leader | 162 | 4050 | 3 | 2430 | $21 / 2$ | 2.4.10.11. |
| Storm building drain | 230.4 | 5760 | 5 | 3456 | 4 | 2.4.10.9. |
| Storm building sewer | 395.8 | 9895 | 6 | 5936 | 5 | 2.4.10.9. |

Example 2: Determination of the size of drainage pipes for buildings
Figure A-2.4.10.-D represents an office building with washrooms for men and women, a drinking fountain and cleaner's closet on each typical floor. The equipment room with facilities is located in the basement. The building is 18 m by 30 m and is to be built in Kitchener, Ontario.
A. Hydraulic Load per Typical Floor

| 5 WC @ 6 | $=$ | 30 | fixture units |
| :--- | :--- | ---: | :--- |
| 2 UR @ $11 / 2$ | $=$ | 3 | fixture units |
| 4 LAV @ $11 / 2$ | $=$ | 6 | fixture units |
| 2 FD @ 3 | $=$ | 6 | fixture units |
| 1 FS @ 3 | $=$ | 3 | fixture units |
| 1 DF @ 1 | $=$ | 1 | fixture unit |

The reader is left to calculate the size of the branches, one of which must be 4 inches and another 3 inches (see Subsection 2.4.9.). Therefore the smallest part of the stack must be 4 inches.
B. Hydraulic Load on Stack

5 storeys @ 49 fixture units = 245 fixture units
Table 2.4.10.6.-A permits 4 -inch pipe. Use 4 -inch pipe.
C. Hydraulic Load on Basement Branch

| $1 \mathrm{WC} @ 6$ | $=$ | 6 fixture units |
| :--- | :--- | :--- |
| 1 LAV @ 1 | $=$ | 1 fixture unit |
| 2 FD @ 3 | $=$ | 6 fixture units |
| 1 FS @ 3 | $=$ | 3 fixture units |

Semi-continuous Flow
$0.23 \mathrm{~L} / \mathrm{s} \times 31.7$

Table 2.4.10.6.-B permits 3-inch pipe. Use 3-inch pipe.
D. Hydraulic Load on Building Drain

| From soil-or-waste <br> stack | 245 | fixture units |
| :--- | ---: | :--- |
| From basement <br> branch | 23 | fixture units |
|  | 268 | fixture units |

Referring to Table 2.4.10.6.-C, at a slope of 1 in 50, a 4-inch pipe will carry 240 fixture units. Referring to Table 2.4.10.6.-C, at a slope of 1 in 25 , a 4 -inch pipe will carry 300 fixture units. For practical reasons, use a 4-inch pipe at a slope of not less than 1 in 32.

Figure A-2.4.10.-D
Building Drainage System (Example 2)
E. Storm Load

Area of roof $18 \times 30=540 \mathrm{~m}^{2}$
Rainfall intensity for Kitchener, taken from Appendix C of Division B of the NBC, is 28 mm in 15 min
Total hydraulic storm load $=28 \times 540=15120 \mathrm{~L}$
Storm load on each roof drain $=15$ 120/2 $=7560$ L
F. Size of Horizontal Leaders

Referring to Table 2.4.10.9., at a slope of 1 in 25 , a 4 -inch pipe will carry a load of 8430 L .
Referring to Table 2.4.10.9., at a slope of 1 in 100, a 5 -inch pipe will carry a load of 7650 L .
Referring to Table 2.4.10.9., at a slope of 1 in 133, a 6-inch pipe will carry a load of 10700 L .
Therefore, use a 5 -inch pipe at a slope of 1 in 100 .
G. Size of Vertical Leader

Table 2.4.10.11. would permit a 5 -inch pipe ( 19500 L ) but this size is not readily available. For practical reasons, use a 6 -inch pipe.
H. Size of Storm Building Drains

Since a drainage pipe cannot be any smaller than any upstream pipes, the storm building drain must be at least 6 inches. Referring again to Table 2.4.10.9., a 6 -inch pipe will carry a hydraulic load of 17600 L at a slope of 1 in 50 . Therefore use a 6 -inch pipe at a slightly higher slope.
I. Size of Combined Building Sewer
(a) Total sanitary load excluding semi-continuous flow 260 fixture units converted to litres (Clause 2.4.10.5.(1)(b)) $\times 9.1=2366 \mathrm{~L}$
(b) Semi-continuous flow $0.23 \mathrm{~L} / \mathrm{s}$ converted to litres (Sentence 2.4.10.3.(2)) $\times 900=207 \mathrm{~L}$
(c) Storm load 15120 L

Total hydraulic load 17693 L
Referring to Table 2.4.10.9., at a slope of 1 in 50, a 6 -inch pipe will carry 17600 L .
Referring to Table 2.4.10.9., at a slope of 1 in 25 , a 6 -inch pipe will carry 24900 L .
Therefore, use a 6 -inch pipe at a slope of not less than 1 in 32 .
A-2.4.10.4.(1) Rainfall Intensities. Climate information on rainfall intensities for various cities can be found in Appendix C of Division B of the NBC.
When calculating the hydraulic load from a roof or paved surface, it should be noted that a 1 mm depth of water on $1 \mathrm{~m}^{2}$ of surface is equivalent to 1 L .

## A-2.5.1.1.(3) Trapping of Floor Drains.

Figure A-2.5.1.1.(3)
Trapping of Floor Drains

## A-2.5.1.1.(4) Venting not Required.

Figure A-2.5.1.1.(4)
Venting not Required

A-2.5.2.1. Wet Venting. Single-storey and multi-storey wet venting has been replaced with wet venting (Article 2.5.2.1.) and circuit venting (Article 2.5.3.1.).
The information and figures presented in this Note are examples of the most common installation practices that meet NPC requirements. However, the examples shown do not preclude other installations that would also conform to NPC requirements.

Figure A-2.5.2.1.-A
Example of Wet Venting Described in Clause 2.5.2.1.(1)(b)

Figure A-2.5.2.1.-B
Example of Wet Venting Described in Clause 2.5.2.1.(1)(c)

## Note to Figure A-2.5.2.1.-B:

(1) A symmetrical connection is accomplished with a manufactured fitting that has two or more inlets and connects two or more waste lines to a vent or wet vent.

Figure A-2.5.2.1.-C

Example of Circuit Venting Described in Sentence 2.5.3.1.(8)

Figure A-2.5.3.1.-K
Example of Circuit Venting Described in Sentence 2.5.3.1.(9)
Note to Figure A-2.5.3.1.-K:
(1) The drain is sized as a branch. The size of the drain should be increased as the load increases.

Figure A-2.5.3.1.-L
Example of Circuit Venting Described in Sentence 2.5.3.1.(10)
Notes to Figure A-2.5.3.1.-L:
(1) The relief vent and the additional circuit vent are one size smaller than the circuit vent.
(2) See Sentence 2.5.7.3.(1).

Figure A-2.5.3.1.-M
Example of Circuit Venting Described in Sentence 2.5.3.1.(11)
Note to Figure A-2.5.3.1.-M:
(1) When sizing the circuit vent, do not include fixtures with a hydraulic load of 2 fixture units that are connected downstream of the most downstream water closets.

A-2.5.4.3. Yoke Vent. In Ontario, yoke vents have traditionally been referred to as modified stack vents.

Figure A-2.5.4.3.
Yoke Vent

A-2.5.4.4.(1) Offset Relief Vents. When an offset is greater than 1.5 m , it must be sized the same way as a branch or building drain (see Sentence 2.4.10.6.(2)). An offset relief vent is required at points A and B or A and $C$ in Figure A-2.5.4.4.(1).

Figure A-2.5.4.4.(1)

## Offset Relief Vents

A-2.5.4.5.(1) Fixture Connections to Vent Pipes. When one or more fixture drains are connected to a vent pipe, the vent pipe becomes a wet vent. It must then conform to all the requirements that can apply to it as a drainage pipe and a vent pipe.

## A-2.5.5.2. Venting of Oil Interceptors.

Figure A-2.5.5.2.
Venting of Oil Interceptors

A-2.5.6.2.(2) Vent Pipe Connections. Fittings used to connect vent pipes to nominally horizontal soil-or-waste pipes are specified in Subsection 2.2.4.

Figure A-2.5.6.2.(2)

## A-2.5.6.3.(1) Vent Connection and Location of Vent Pipes.

Figure A-2.5.6.3.(1)-A
Vent Connection
Note to Figure A-2.5.6.3.(1)-A:
(1) The vent pipe must be connected in accordance with Article 2.5.6.2.

Figure $A-2 \cdot 5 \cdot 6.3 .(1)-B$
Location of Vent Pipes That Protect Fixture Traps and Maximum Change in Direction of Trap Arms

## A-2.5.6.3.(2) Location of Vent Pipes.

Total change in direction: $225^{\circ}$
(a)

Total change in direction: $225^{\circ}$
(b)

Figure A-2.5.6.3.(2)
Location of Vent Pipes and Maximum Change in Direction of Trap Arms for Fixtures That Depend on Siphonic Action

## A-2.5.6.3.(3) Length of WC Fixture Drain.

Figure A-2.5.6.3.(3)
Length of WC Fixture Drain
Note to Figure A-2.5.6.3.(3):
(1) Fall and length of WC fixture drain applies to floor-mounted and wall-hung WC's.

A-2.5.6.5.(4) Vent Terminals. No vent pipe other than a fresh air inlet may terminate within the limits indicated.

Figure A-2.5.6.5.(4)

## Vent Terminals

A-2.5.8. Sizing of Venting Systems. Vent pipes are connected to the drainage system and terminate outside the building. They allow air to enter and circulate and they protect the trap seals in the drainage system. Except as permitted in Subsection 2.5.1., a trap shall always be protected by a vent pipe.

## Sizing of Vent Pipes

The sizes stated in Table 2.5.7.1. take precedence over all other venting tables.

## Sizing of Relief Vents

Length is not taken into consideration when sizing a relief vent and an additional circuit vent. A relief vent connected to a circuit-vented branch is sized according to Sentences 2.5.7.3.(1) and (2).

An offset relief vent is sized according to Sentence 2.5.7.4.(1), which permits the offset relief vent to be one size smaller than the stack vent.

Figure A-2.5.8.
Sizing of a Venting System
Notes to Figure A-2.5.8.:
(1) All water closets are 4 fixture units each.
(2) The letters in columns 1 and 3 of Table A-2.5.8. correspond to the letters in this Figure.

Table A-2.5.8.
Sizing of Venting Systems
Forming Part of Note A-2.5.8.

| Vent Pipe ${ }^{(1)}$ | Vent Name | Developed Length Used to Determine Size, $\mathrm{m}^{(1)}$ | Hydraulic Load Used to Determine Size, fixture units | Code Reference | Minimum Size, inches |
| :---: | :---: | :---: | :---: | :---: | :---: |
| A | Continuous vent | $A+C=13$ | 5 | 2.5.7.1. | $11 / 2$ |
| B | Sump vent | $\mathrm{n} / \mathrm{a}$ | n/a | 2.5.7.7.(1) | 2 |
| C | Branch vent | $A+C=13$ | 5 | 2.5.7.7.(2) | 2 |
| D | Vent stack | 2+D+F+l+N+S+T=17 | 66 | $\begin{aligned} & \text { 2.5.7.1. } \\ & \text { 2.5.7.2. } \end{aligned}$ | 3 |
| E | Individual and continuous vent | n/a | n/a | 2.5.7.1. | $11 / 4$ |
| F | Vent stack | Same as D=17 | 71 | Same as D | 3 |
| G | Continuous vent | G=3 | 6 | $\begin{gathered} \text { 2.5.8.3.(5) } \\ \text { 2.5.7.1. } \end{gathered}$ | $11 / 2$ |
| H | Dual and continuous vent | n/a | n/a | 2.5.7.1. | $11 / 4$ |
| 1 | Vent stack | Same as D=17 | 71 | Same as D | 3 |
| J | Circuit vent | $J+M=7$ | 40 | $\begin{gathered} \hline 2.5 \cdot 7.1 . \\ \text { 2.5.8.3.(4) } \end{gathered}$ | $11 / 2$ |
| K | Additional circuit vent | n/a | n/a | $\begin{gathered} \hline 2.5 \cdot 7.1 . \\ \text { 2.5.7.3.(1) } \end{gathered}$ | $11 / 2$ |
| L | Relief vent | n/a | n/a | $\begin{gathered} \hline 2.5 .7 .1 . \\ \text { 2.5.7.3.(1) } \end{gathered}$ | $11 / 2$ |
| M | Branch vent | J+M=7 | 40 | $\begin{aligned} & \text { 2.5.7.1. } \\ & \text { 2.5.7.2. } \end{aligned}$ | $11 / 2$ |
| N | Vent stack | Same as D=17 | 71 | Same as D | 3 |
| 0 | Stack vent | O+Q+T=5 | 66 | $\begin{aligned} & \text { 2.5.7.1. } \\ & \text { 2.5.8.4. } \end{aligned}$ | 2 |
| P | Circuit vent | $\mathrm{P}=4$ | 16 | $\begin{gathered} \hline 2.5 .7 .1 \\ \text { 2.5.8.3.(4) } \end{gathered}$ | $11 / 2$ |
| Q | Stack vent | Same as 0=5 | 66 | $\begin{aligned} & \text { 2.5.7.1 } \\ & \text { 2.5.8.4 } \end{aligned}$ | 2 |
| R | Stack vent | R+S+T=9 | 7.5 | 2.5.2.1.(1)(a) | 3 |
| S | Vent header | A+C+F+1+N+S+T=25 | 78.5 | 2.5.8.3.(3) | 3 |
| T | Vent header | Same as S=25 | 78.5 | 2.5.8.3.(3) | 3 |
| U | Individual vent | n/a | n/a | 2.5.7.1. | $11 / 4$ |
| V | Branch vent | $\mathrm{U}+\mathrm{V}+\mathrm{W}=11$ | 2 | $\begin{aligned} & \text { 2.5.7.1. } \\ & \text { 2.5.7.2. } \end{aligned}$ | $11 / 4$ |
| W | Branch vent | Same as V=11 | 3 | $\begin{aligned} & \text { 2.5.7.1. } \\ & \text { 2.5.7.2. } \end{aligned}$ | $11 / 4$ |
| X | Stack vent | $X+Y=3$ | 4 | $\begin{aligned} & \text { 2.5.7.1. } \\ & \text { 2.5.8.4. } \end{aligned}$ | $11 / 4$ |
| Y | Stack vent | Same as $\mathrm{X}=3$ | 4 | $\begin{aligned} & \text { 2.5.7.1. } \\ & \text { 2.5.8.4. } \end{aligned}$ | $11 / 4$ |

## Notes to Table A-2.5.8.:

${ }^{(1)}$ The letters in columns 1 and 3 correspond to the letters in Figure $\mathrm{A}-2.5 .8$.

## A-2.5.8.1.(2) Sizing of Wet Vent Systems.

Figure A-2.5.8.1.(2)
Sizing of Wet Vent Systems
Note to Figure A-2.5.8.1.(2):
(1) These two fixtures are not included when determining the size of the wet vent portion using Table 2.5.8.1.

A-2.5.8.3. and 2.5.8.4. Lengths to be Considered When Sizing Vent Pipes.

Figure A-2.5.8.3. and 2.5.8.4.-A
Lengths to be Considered When Sizing Vent Pipes
Notes to Figure A-2.5.8.3. and 2.5.8.4-A:
(1) See Article 2.5.8.2.
(2) See Article 2.5.8.3.

Figure $\mathrm{A}-2 \cdot 5.8 .3$. and 2.5 .8 .4 .-B
Lengths to be Considered When Sizing Vent Pipes
Notes to Figure A-2.5.8.3. and 2.5.8.4.-B:
(1) See Sentence 2.5.8.4.(2).
(2) See Sentence 2.5.8.3.(3).

A-2.6.1.3.(5) Shut-off Valves. Where multiple risers convey the water supply to dwelling units, each dwelling unit's water distribution system shall be provided with a shut-off valve located immediately where the water piping enters the suite so as to isolate the fixtures as well as the water distribution piping serving the dwelling unit's fixtures. Fixture stopcocks or shut-off valves located immediately adjacent to a fixture may not be adequate to protect the water distribution piping. Where a dwelling unit is served by a single shut-off valve on the water supply, additional shut-off valves may be required to achieve compliance with Sentences 2.6.1.3.(4) and (7).

A-2.6.1.6.(5) Flush-Tank-Type Urinals in Seasonal Buildings. Flush-tank-type urinals that are not in use for an extended period of time, such as those in seasonal buildings, are permitted to be set up to flush automatically at predetermined intervals. Automatic flushing prevents the depletion of the water seal due to evaporation or backflow conditions. The trap seal restricts the infiltration of gases, which can pose health and safety concerns.

A-2.6.1.7.(5) Relief Valves. If the discharge piping is longer than 2 m or more than two $90^{\circ}$ elbows are used, the valve manufacturer's installation instructions should be followed to ensure that the piping does not affect the relief valves' discharge capacity.

A-2.6.1.9.(1) Water Hammer Prevention. Water hammer is a buildup of pressure in a length of horizontal or vertical pipe that occurs when a valve or faucet is closed suddenly. The longer the pipe and the greater the water velocity, the greater the pressure exerted on the pipe, which can be many times the normal static water pressure and be sufficient to damage the piping system. Since air chambers made from a piece of vertical pipe do not provide acceptable protection, pre-manufactured water hammer arresters are required to address this potential problem. Water hammer arresters need not be installed at every valve or faucet, nor in every piping system.

A-2.6.1.11.(1) Thermal Expansion. To accommodate the increase in pressure caused by thermal expansion within a closed water distribution system, one of the following should be installed:
(1) a suitably sized diaphragm expansion tank designed for use within a potable water system,
(2) an auxiliary thermal expansion relief valve (T.E.R. valve) conforming to CSA B125.3, "Plumbing Fittings," set at a pressure of 550 kPa or less and designed for repeated use, or
(3) other means acceptable to the authority having jurisdiction.

A-2.6.1.12.(1) Service Water Heaters. Storing hot water at temperatures below $60^{\circ} \mathrm{C}$ in the hot water tank or in the delivery system may lead to the growth of legionella bacteria. Contemporary electric water heater tanks experience temperature stratification and thus tend to have legionella bacteria in the lower parts of the tank. Article 2.6.1.12. specifies a thermostat setting of $60^{\circ} \mathrm{C}$, which addresses the concern over the growth of legionella bacteria in electric hot water storage tanks and is enforceable without introducing unnecessary complications. The growth of legionella bacteria is not a concern for other types of water heaters with different designs that use different fuels.
Electrically heated water heaters are shipped with the thermostat set at $60^{\circ} \mathrm{C}$. Article 2.6.1.12. is included in the NPC to formalize this de facto temperature setting as a requirement. The thermostats have graduated temperature markings to allow such a setting, which is not the case with gas- or oil-heated water heaters.

A-2.6.2.1.(3) Backflow Preventers. CSA B64.10.1, "Maintenance and Field Testing of Backflow Preventers," is considered to represent good practice as regards procedures for the maintenance and field testing of backflow preventers.

A-2.6.2.4.(2) Backflow from Fire Protection Systems. The following document is considered to be good engineering practice when selecting a backflow preventer for installation on a fire protection system: AWWA M14, "Recommended Practice for Backflow Prevention and Cross-Connection Control."

Table A-2.6.2.4.(2)
Selection Guide for Backflow Prevention Devices on Fire Sprinkler and Standpipe Systems Forming Part of Note A-2.6.2.4.(2)

| CSA Standard Number | Type of Device ${ }^{(1)}$ | Systems Made with Potable Water System Materials |  | Systems Not Made with Potable Water System Materials |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Minor Hazard Residential Partial Flow-Through System | Minor Hazard — Class 1 System | Moderate Hazard Class 1, 2, 3 and 6 Systems | Severe Hazard Any Class of System in which Antifreeze or Other Additives Are Used |
| CSA B64.6.1 | DuCF | P | NP | NP | NP |
| CSA B64.9 | SCVAF | P | P | NP | NP |
| CSA B64.5.1 | DCVAF | P | P | P | NP |
| CSA B64.4.1 | RPF | P | P | P | P |
| NP = Not permitted <br> P = Permitted |  |  |  |  |  |

## Notes to Table A-2.6.2.4.(2):

${ }^{(1)}$ The "F" indicates that the product is only recommended for use on fire sprinkler and standpipe systems.

## A-2.6.2.4.(3) Fire Department Pumper Connection and Backflow Protection.

Figure A-2.6.2.4.(3)
Fire Department Pumper Connection and Backflow Protection

A-2.6.2.6.(1) Locations Requiring Premise Isolation. The following list is a guide to locations where premise isolation may be required:

- hospital buildings with operating, mortuary or laboratory facilities
- radioactive material processing plants
- petroleum processing facilities
- premises where inspection is restricted
- sewage treatment plants
- commercial laundries (excluding laundromats)
- plating or chemical plants
- docks and dockside facilities
- food and beverage processing plants
- steam plants
- trackside facilities for trains

An assessment of the hazard must be carried out to determine the need, if any, for a backflow prevention device.

## A-2.6.2.9.(2) Installation of Air Gaps.

Figure A-2.6.2.9.(2)
Installation of Air Gaps

## A-2.6.2.10.(2) Installation of Atmospheric Vacuum Breakers.

Figure A-2.6.2.10.(2)
Installation of Atmospheric Vacuum Breakers

A-2.6.3. Water Systems. Subsection 2.6.3. contains performance requirements for water systems. Two widely used references for the design of water systems are:

NIST Building Materials and Structures Report BMS-79, "Water-Distributing Systems for Buildings," United States Department of Commerce, National Bureau of Standards, Washington, D.C., and
McGraw-Hill 2009, "International Plumbing Codes Handbook," edited by V.T. Manas, McGraw-Hill Book Company, New York, U.S.A.

A-2.6.3.1. Water Quality. Water destined for use as potable water can originate from a variety of sources that are generally classified as surface waters or well waters, such as lakes, rivers, streams and aquifers. In some localities, there may be seasonal variations in the water supply, and surface and well waters may be blended at times.
Water composition is the primary consideration in determining the cause of corrosion in potable water systems. If the water has corrosive characteristics, water treatment may be necessary to control its corrosiveness: this may be as straightforward as adjusting the pH of the water at the treatment plant, or it may involve more extensive corrosion-control treatment methods. Water purveyors normally consult treatment specialists to develop methods suitable for specific conditions. The treatment of water from private wells may also require expert consultation.
The past performance of plumbing materials and products in different localities often provides insight into what can be expected with new installations. In areas where water-related corrosion is known to occur, adjustment of water chemistry may be sufficient or it may be necessary to select alternative piping and fitting materials or more robust products.
It is important to note that not all corrosion can be attributed to water conditions: the improper design and installation of potable water systems may result in erosion corrosion, galvanic corrosion, fatigue cracking, and so forth.

A-2.6.3.1.(2) Potable Water Systems. The design procedures contained in the following documents are considered good engineering practice in the field of potable water systems:
(a) ASHRAE 2011, "ASHRAE Handbook - HVAC Applications," chapter on Service Water Heating,
(b) ASHRAE 2013, "ASHRAE Handbook - Fundamentals," chapter on Pipe Sizing,
(c) ASPE 2010, "Plumbing Engineering Design Handbook, Volume 2," chapter on Cold Water Systems, and
(d) ASPE 2010, "Plumbing Engineering Design Handbook, Volume 2," chapter on Domestic Water Heating Systems.
Alternatively, the following methods, which apply to both public and private water supplies, may be used in determining the size of each section of the water system using Table A-2.6.3.1.(2)-A (Small Building Method) and Table A-2.6.3.1.(2)-F (Average Pressure Loss Method). Where these methods are considered an alternative to a detailed engineering design method, the hydraulic loads shall be the sum of the total fixture units given in Tables 2.6.3.2.-A, 2.6.3.2.-B, 2.6.3.2.-C and 2.6.3.2.-D.

## Small Building Method

Information required if using this method:
(a) The developed length:
(i) from the property line or private water supply system when located outside the building to the water service entry point to the building, and
(ii) from the water service entry point to the building to the most remote water outlet.
(b) Minimum static pressure:
(i) the minimum static pressure available at the property line or other water source (private water supply system), or
(ii) where there is a wide fluctuation of pressure in the main throughout the day, the minimum static pressure available.
(c) Pressure losses:
(i) losses for meters, pressure-reducing valves, backflow preventers, water treatment systems, and any other devices, and
(ii) losses or gains due to changes in elevation.
(d) The number of fixture units (FU) as determined by using the sum of the total values given in Tables 2.6.3.2.-A, 2.6.3.2.-B, 2.6.3.2.-C and 2.6.3.2.-D.
(e) The maximum velocities permitted in accordance with the manufacturer's recommendations for the pipe and fittings chosen for the installation.
Note that a private water supply system must be capable of meeting the demands of the water distribution system.

## Pipe Sizing Procedures (see Figure A-2.6.3.1.(2)-A)

Step 1: Water Service Piping (see Table A-2.6.3.1.(2)-B)
(a) Obtain the total fixture units required for the installation using the sum of the total values given in Tables 2.6.3.2.-A, 2.6.3.2.-B, 2.6.3.2.-C and 2.6.3.2.-D and consider all other demands on the water supply.
(b) Determine the minimum static pressure available at the property line or private water supply system and consider all pressure losses for the water service.
(c) Select the pressure range group in Table A-2.6.3.1.(2)-A that is consistent with the minimum static pressure available including any other losses.
(d) Select the length column in Table A-2.6.3.1.(2)-A that is equal to or greater than the developed length from the property line or private water supply system to the water service entry point to the building.
(e) In that column, find the fixture unit value that is equal to or greater than the fixture unit demand for the installation and follow the row back to the first column to locate the water service pipe size.
(f) To establish the adjusted static pressure available where the water service enters the building for sizing the water distribution system, subtract the actual static pressure losses for the water service from the minimum static pressure available at the property line.
(g) The adjusted static pressure available where a private water supply system is installed should be the static pressure available from such a system at the entry to the building.
Step 2: Hot Water Piping (see Table A-2.6.3.1.(2)-C)
(a) Start with the most remote outlet in the most distant occupancy that requires hot water.
(b) Use the sum of the total fixture unit values given in Tables 2.6.3.2.-A, 2.6.3.2.-B, 2.6.3.2.-C and 2.6.3.2.-D and work back toward the service water heater, adding in the fixture unit values as they occur.
(c) Select the pressure range group in Table A-2.6.3.1.(2)-A that is consistent with the minimum static pressure available at the water service entry and any other losses (e.g. elevation or devices such as backflow preventers, etc.). Use this pressure range group for all portions (hot and cold) of the water distribution system.
(d) Select the length column that is equal to or greater than the developed length from the water service entry point to the building to the most remote outlet served with either hot or cold water.
(e) In that column, find the fixture unit value that is equal to or greater than the fixture unit demand at each pipe and follow the row back to the second column to locate the water distribution system pipe size.
Step 3: Cold Water Piping (see Table A-2.6.3.1.(2)-D)
(a) Start with the most remote outlet on the cold water piping using the established total developed length column and pressure range group in Table A-2.6.3.1.(2)-A and work through Steps 2(c), (d) and (e) for hot water piping.
(b) Use the sum of the total fixture unit values given in Tables 2.6.3.2.-A, 2.6.3.2.-B, 2.6.3.2.-C and 2.6.3.2.-D and work back toward the water service entry.
(c) Where the service water heater distribution pipe occurs, add in the fixture unit demand of the fixtures served only with hot water and those that have not yet been added in as served to the cold water side of the most remote fixtures requiring both a hot and cold water supply.
(d) Continue by sizing the cold water main between the service water heater distribution pipe and the water service entry.
(e) Add in the fixtures served with cold water only from the main within the most remote occupancy as they occur and all common distribution piping serving hot and cold water to other occupancies as they occur.
(f) Complete by sizing all distribution piping served by the main within the most remote occupancy and then the other occupancies not yet sized using the previously established total developed length and pressure range group in Table A-2.6.3.1.(2)-A.

Table A-2.6.3.1.(2)-A
Pipe Sizes for Water Systems Based on Number of Fixture Units Served Using the Small Building Method ${ }^{(1)}$

| Water Service Pipe, inches | Water Distribution System, inches | Maximum Allowable Length, m |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Figure A-2.6.3.1.(2)-A

## Example of Commercial and Residential Development to be Used with Water Pipe Sizing Methods

Notes to Figure A-2.6.3.1.(2)-A:
(1) This example is a development with 4 commercial occupancies on the lower floor and 5 residential occupancies on the upper floor, all with separate service water heaters.
(2) For the purpose of water pipe sizing:

- the minimum adjusted pressure available at building entry is $540 \mathrm{kPa}(78 \mathrm{PSI})$;
- the developed length of the water service is $30 \mathrm{~m}(98 \mathrm{ft})$; and
- the developed length of the water distribution system is 76 m ( 249 ft ).

Table A-2.6.3.1.(2)-E
Fixture Units Summary for Figure A-2.6.3.1.(2)-A Using Tables 2.6.3.2.-A, -B, -C and -D

| Fixtures | Quantity | $100 \%$ Fixture Unit Values | Total Demand (Quantity x Fixture <br> Unit Values) |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Lavatory, 8.3 LPM or less | 3 | 2 | 6 |  |  |  |
| Commercial sink | 2 | 4 | 8 |  |  |  |
| Service sink | 1 | 3 | 3 |  |  |  |
| W.C., 6 LPF or less | 4 | 2.2 | 8.8 |  |  |  |
| Other | - | - | - |  |  |  |
| Commercial dishwasher | 1 | 4 | 4 |  |  |  |
| Commercial occupancy | 1 | 16 | 16 |  |  |  |
| Commercial occupancy | 1 | 44 | 44 |  |  |  |
| Commercial occupancy | 1 | 21 | 21 |  |  |  |
| Residential occupancy | 5 | 20 | 100 |  |  |  |
| Total Fixture Units |  |  |  |  |  | 210.8 |

## Average Pressure Loss Method

Information required if using this method:
(a) The developed length:
(i) from the property line or private water system when located outside the building to the water service entry point to the building, and
(ii) from the building entry of the water service to the most remote water outlet.
(b) Minimum static pressure:
(i) the minimum static pressure available at the property line or other water source (private water supply system), or
(ii) where there is a wide fluctuation of pressure in the main throughout the day, the minimum static pressure available.
(c) Pressure losses:
(i) losses for meters, pressure-reducing valves, backflow preventers, water treatment systems, and any other devices, and
(ii) losses or gains due to changes in elevation.
(d) The number of fixture units as determined by using the sum of the total values given in Tables 2.6.3.2.-A, 2.6.3.2.-B, 2.6.3.2.-C and 2.6.3.2.-D.
(e) The maximum velocities permitted in accordance with the manufacturer's recommendations for the pipe and fittings chosen for the installation.

Note: The private water supply system must be capable of meeting the demands of the water distribution system.
To use this method, calculate the pressure available for friction loss which must be 2.6 kPa per metre or more; if it is less than that, the system must be designed according to a detailed engineering design method.

## Calculating Pressure Available for Friction Loss (see Figure A-2.6.3.1.(2)-B)

(a) Obtain the water service size, including pressure losses, and the design of the private water supply system if it is separate from the water distribution system.
(b) To calculate the total equivalent length for the water distribution system, determine the developed length from the water service entry point to the building to the most remote water outlet, and
(i) where fitting inside diameter dimensions are at least equal to the pipe size, multiply the developed length by 1.5 to allow for friction losses, and
(ii) where insert fittings are used, apply additional losses in accordance with the fitting manufacturer's data.
(c) To determine the adjusted pressure available at the water service entry for sizing the water distribution system, deduct the pressure losses for the water service from the minimum static pressure available at the property line or private water source.
(d) To obtain the pressure available for friction loss, use the minimum adjusted static pressure available at the water service entry and deduct the minimum operating pressure necessary at the most remote water outlet, and losses for meters, pressure-reducing valves, backflow preventers, water treatment systems, and any other devices. Include pressure losses or gains due to changes in elevation between the water service entry and the most remote water outlet.
(e) Divide the static pressure available for friction loss by the total equivalent length to obtain the pressure available for friction loss per metre.

Figure A-2.6.3.1.(2)-B
Determination of Pressure Available for Friction Loss

## Pipe Sizing Procedures (see Figure A-2.6.3.1.(2)-A)

Step 1: Water Service Piping (see Table A-2.6.3.1.(2)-G)
(a) Obtain the total fixture units required for the installation using the sum of the total values given in Tables 2.6.3.2.-A, 2.6.3.2.-B, 2.6.3.2.-C and 2.6.3.2.-D and consider all other demands on the water supply.
(b) Select the water service pipe size from Table A-2.6.3.1.(2)-F using the velocity column that is consistent with the pipe and fittings chosen for the installation.
(c) Determine the minimum static pressure available at the property line or private water source and consider all pressure losses for the water service.
(d) To establish the adjusted static pressure available where the water service enters the building for sizing the water distribution system, subtract the actual static pressure losses for the water service from the minimum static pressure available at the property line.
(e) The adjusted static pressure available where a private water supply system is installed should be the static pressure available from such a system at the entry to the building.

Step 2: Hot Water Piping (see Table A-2.6.3.1.(2)-H)
(a) Start with the most remote outlet in the most distant occupancy that requires hot water.
(b) Use the sum of the total fixture unit values given in Tables 2.6.3.2.-A, 2.6.3.2.-B, 2.6.3.2.-C and 2.6.3.2.-D and work back toward the service water heater, adding in the fixture unit values as they occur.
(c) Size the hot water system according to Table A-2.6.3.1.(2)-F using the velocity column that is consistent with the manufacturer's requirements for the pipe and fittings chosen when serving a hot water system.

Step 3: Cold Water Piping (see Table A-2.6.3.1.(2)-I)
(a) Start with the most remote outlet requiring cold water in the most distant occupancy and working back towards the water service entry adding in the fixture unit values as they occur.
(b) Obtain the fixture units using the sum of the total fixture unit values given in Tables 2.6.3.2.-A, 2.6.3.2.-B, 2.6.3.2.-C and 2.6.3.2.-D.
(c) Size the cold water system to Table A-2.6.3.1.(2)-F using the velocity column that is consistent with the manufacturer's requirements for the pipe and fittings chosen when serving a cold water system.
(d) Where the service water heater distribution pipe occurs, add in the fixture unit demand of the fixtures served with only hot water and those that have not yet been added in as served to the cold water side of the most remote fixtures requiring both hot and cold water supply.
(e) Continue by sizing the cold water main between the service water heater distribution pipe and the water service entry.
(f) Add in the fixtures served with only cold water from the main within the most remote occupancy as they occur and then all common distribution piping serving hot and cold water to other occupancies as they occur.
(g) Complete by sizing all distribution piping served by the main in the most remote occupancy and then the other occupancies not yet sized using Table A-2.6.3.1.(2)-F.

Table A-2.6.3.1.(2)-F
Pipe Sizes for Water Systems Based on Number of Fixture Units Served Using the Average Pressure Loss Method

| Pipe Size, inches | Water Velocity |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $3.0 \mathrm{~m} / \mathrm{s}(10 \mathrm{ft} / \mathrm{s})$ |  | 2.4 m/s (8 ft/s) |  | $1.5 \mathrm{~m} / \mathrm{s}(5 \mathrm{ft} / \mathrm{s})$ |  | $1.2 \mathrm{~m} / \mathrm{s}(4 \mathrm{ft} / \mathrm{s})$ |  |
|  | Flow and Fixture Units Served |  |  |  |  |  |  |  |
|  | L/s | Fixture Units | L/s | Fixture Units | L/s | Fixture Units | L/s | Fixture Units |
| 1/2 | 0.46 | 8 | 0.36 | 7 | 0.23 | 3.5 | 0.18 | 2.5 |

Notes to Table A-2.6.3.1.(2)-I:
${ }^{(1)}$ Based on $2.4 \mathrm{~m} / \mathrm{s}$ velocity and adjusted static pressure at water service entry of 540 kPa .

A-2.6.3.2.(4) Sizing for Flush Valves. Distribution piping and water mains serving flush valves may be sized using the values assigned in Tables 2.6.3.2.-B and 2.6.3.2.-C, beginning with the most remote flush valve on each section of distribution piping served by the water main.

A-2.6.3.4.(5) Sizing of Water Systems. Sentence 2.6.3.4.(5) and Table 2.6.3.4. present a simplified method of water system sizing, which is permitted in buildings containing one or two dwelling units or row houses with separate water services.

## Simplified Method

This sizing method may be used in the buildings noted, where:
(a) the total developed length from the property line to the most remote fixture is not more than 90 m , and
(b) the static pressure available at the water service entry to the building is not less than 200 kPa .

Where either the developed length is exceeded or the minimum static pressure required is not known, a detailed engineering design method must be used to size the water service piping. The design must ensure a minimum static pressure of 200 kPa is available at the water service entry to the building.
Information required when using this method:
(a) The total number of fixture units (FU) as determined by using the sum of the total fixture unit values given in Tables 2.6.3.2.-A, 2.6.3.2.-B, 2.6.3.2.-C and 2.6.3.2.-D.
(b) Where the water service also serves a fire sprinkler system, irrigation system, or any other system, these demands must be added to the water service sizing.

## Pipe Sizing Procedures

Step 1: Water Service Pipe
(a) Obtain the total fixture units required for the installation using the sum of the total values given in Tables 2.6.3.2.-A, 2.6.3.2.-B, 2.6.3.2.-C and 2.6.3.2.-D and consider all other demands on the water supply.
(b) Determine the water service pipe size using the water velocity column in Table 2.6.3.4. that is consistent with the pipe material chosen for the installation.
Step 2: Hot Water Piping
(a) Start with the most remote fixture requiring a supply of hot water and work back toward the service water heater, adding in the fixture unit loads as they occur.
(b) Determine the fixture units using the sum of the total fixture unit values given in Tables 2.6.3.2.-A, 2.6.3.2.-B, 2.6.3.2.-C and 2.6.3.2.-D.
(c) Size the hot water system using the water velocity column in Table 2.6.3.4. that is consistent with the manufacturer's recommendations for the pipe and fittings chosen when serving a hot water system.

Step 3: Cold Water Piping
(a) Start with the most remote fixture requiring a supply of cold water and work back toward the water service entry, adding in the fixture unit loads as they occur.
(b) Obtain the fixture units using the sum of the total fixture unit values given in Tables 2.6.3.2.-A, 2.6.3.2.-B, 2.6.3.2.-C and 2.6.3.2.-D.
(c) Size the cold water system using the water velocity column in Table 2.6.3.4. that is consistent with the manufacturer's recommendations for the pipe chosen when serving a cold water system.
(d) Where the service water heater distribution pipe occurs, add in the fixture unit demand of the fixtures served with only hot water and those that have not yet been added in as served to the cold water side of the fixtures requiring both a hot and cold water supply.
(e) Continue sizing the cold water main between the service water heater distribution pipe and the water service entry by adding all fixtures served with only a cold water supply as they occur.
(f) Complete by sizing all cold water distribution piping served by the main between the water heater distribution pipe and the water service entry.

Figure A-2.6.3.4.(5)-A
Determining the Hydraulic Needs of a Fixture
Notes to Figure A-2.6.3.4.(5)-A:
(1) The fixture spout delivers a maximum of 2.0 fixture units.
(2) This would apply if only the hot side or the cold side were fully opened.
(3) The common pipe that serves both the hot and cold sides of the faucet also delivers a maximum of 2.0 fixture units even if both the hot and cold valves at the faucet are fully opened at the same time.

Table A-2.6.3.4.(5)-A
Fixture Units Summary Using Figure $A-2 \cdot 6 \cdot 3.4 .(5)-B$ and Tables 2.6.3.2.-A, $-B,-C$ and $-D$

| Fixtures | Number of Fixtures | $100 \%$ Fixture Unit Values | Total Demand <br> (Quantity x Fixture Unit Values) |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Bathtub | 2 | 1.4 | 2.8 |  |  |
| Clothes washer | 2 | 1.4 | 2.8 |  |  |

| H | 21.3 | 1 | 1 | $11 / 4$ |  |
| I | 23.8 | 1 | $1 / 2$ | $1 / 4$ |  |
| J | 2.8 | $1 / 2$ | $1 / 2$ | $1 / 2$ |  |
| K | 3.6 |  | $1 / 2$ | $1 / 2$ |  |
| Total Fixture Units | 23.8 |  |  |  |  |

A-2.7.3.2.(1) Outlets from Non-Potable Water Systems. The location of outlets from non-potable water systems where they can be discharged into a sink or lavatory, a fixture into which an outlet from a potable water system is discharged, or a fixture that is used for the preparation, handling or dispensing of food, drink or products that are intended for human consumption, may have proven acceptable on the basis of past performance in some localities, and its acceptance under this Code may be warranted.

A-2.7.4.1. Non-potable Water System Design. There is a growing interest in Canada in using available non-potable water supplies in the place of potable ones for selected purposes such as flushing toilets and irrigating lawns and gardens. Article 2.7.4.1. applies to non-potable water systems regardless of the origin of the water. The non-potable water must meet applicable water quality standards as determined by an authority having jurisdiction.

1.2.1 Definitions of Words and Phrases .. 1-1
1.2.2. Symbols and Other Abbreviations .. 1-1

## Part 1 <br> General

## Section 1.1. Application

### 1.1.1. Application

### 1.1.1.1. Application

1) This Part applies to all plumbing systems covered in this Code. (See Article 1.1.1.1. of Division A.)

## Section 1.2. Terms and Abbreviations

### 1.2.1. Definitions of Words and Phrases

1.2.1.1. Non-defined Terms

1) Words and phrases used in Division $C$ that are not included in the list of definitions in Article 1.4.1.2. of Division A shall have the meanings that are commonly assigned to them in the context in which they are used, taking into account the specialized use of terms by the various trades and professions to which the terminology applies.
2) Where objectives and functional statements are referred to in Division $C$, they shall be the objectives and functional statements described in Parts 2 and 3 of Division A.
3) Where acceptable solutions are referred to in Division C, they shall be the provisions stated in Part 2 of Division B.
4) Where alternative solutions are referred to in Division $C$, they shall be the alternative solutions mentioned in Clause 1.2.1.1.(1)(b) of Division A.

### 1.2.1.2. Defined Terms

1) The words and terms in italics in Division $C$ shall have the meanings assigned to them in Article 1.4.1.2. of Division A.

### 1.2.2. Symbols and Other Abbreviations

1.2.2.1. Symbols and Other Abbreviations

1) The symbols and other abbreviations in Division $C$ shall have the meanings assigned to them in Article 1.4.2.1. of Division A.

## Part 2 <br> Administrative Provisions

## Section 2.1. Application

### 2.1.1. Application

### 2.1.1.1. Application

1) This Part applies to all plumbing systems covered in this Code. (See Article 1.1.1.1. of Division A.)

## Section 2.2. Administration

### 2.2.1. Administration

### 2.2.1.1. Administrative Requirements

1) This Code shall be administered in conformance with the appropriate provincial or territorial regulations, municipal bylaws or, in the absence of such regulations or bylaws, in conformance with the applicable requirements in the Administrative Requirements for Use with the National Building Code of Canada 1985.

### 2.2.2. Plumbing Drawings and Related Documents

### 2.2.2.1. Information Required on Plumbing Drawings and Related Documents

1) Plumbing drawings and related documents submitted with the application for a plumbing permit shall show
a) the location and size of every building drain and of every trap and cleanout fitting that is on a building drain,
b) the size and location of every soil-or-waste pipe, trap and vent pipe, and
c) a layout of the potable water distribution system, including pipe sizes and valves.

## Section 2.3. Alternative Solutions

### 2.3.1. Documentation of Alternative Solutions

(See Note A-2.3.1.)

### 2.3.1.1. Documentation

1) Documentation conforming to this Subsection shall be provided by the person requesting the use of an alternative solution to demonstrate that the proposed alternative solution complies with this Code.
2) The documentation referred to in Sentence (1) shall include
a) a Code analysis outlining the analytical methods and rationales used to determine that the proposed alternative solution will achieve at least the level of performance required by Clause 1.2.1.1.(1)(b) of Division A, and
b) information concerning any special maintenance or operation requirements, including any plumbing system component commissioning requirements, that are necessary for the alternative solution to achieve compliance with the Code after the plumbing system is installed.
3) The Code analysis referred to in Clause (2)(a) shall identify the applicable objectives, functional statements and acceptable solutions, and any assumptions, limiting or restricting factors, testing procedures, engineering studies or performance parameters that will support a Code compliance assessment.
4) The Code analysis referred to in Clause (2)(a) shall include information about the qualifications, experience and background of the person or persons taking responsibility for the design.
5) The information provided under Sentence (3) shall be in sufficient detail to convey the design intent and to support the validity, accuracy, relevance and precision of the Code analysis.
6) Where the design of a plumbing system includes proposed alternative solutions that involve more than one person taking responsibility for different aspects of the design, the applicant for the permit shall identify a single person to co-ordinate the preparation of the design, Code analysis and documentation referred to in this Subsection.

## Notes to Part 2 Administrative Provisions

A-2.3.1. Documentation of Alternative Solutions. Beyond the purposes of demonstrating compliance and acquiring an installation permit, there are other important reasons for requiring that the proponent of an alternative solution submit project documentation (i.e. a compliance report) to the authority having jurisdiction and for the authority having jurisdiction to retain that documentation for a substantial period following the installation of a plumbing system:

- Most jurisdictions require that a plumbing system be maintained in compliance with the codes under which it was installed. Alternative solutions made possible by objective-based codes may have special maintenance requirements, which would be described in the documentation.
- Documentation helps consultants perform code compliance assessments of existing buildings or facilities before they are sold and informs current owners or prospective buyers of existing buildings or facilities of any limitations pertaining to their future use or development.
- Documentation provides design professionals with the basic information necessary to design changes to an existing plumbing system.
- An alternative solution could be invalidated by a proposed alteration to a plumbing system. Designers and regulators must therefore know the details of the particular alternative solutions that were integral to the original design. Complete documentation should provide insight as to why one alternative solution was chosen over another.
- Documentation is the "paper trail" of the alternative solution negotiated between the designer and the regulator and should demonstrate that a rational process led to the acceptance of the alternative solution as an equivalency.
- It is possible that over time a particular alternative solution may be shown to be inadequate. It would be advantageous for a jurisdiction to know which plumbing systems included that alternative solution as part of their design: documentation will facilitate this type of analysis.
- Project documentation provides important information to a forensic team that is called to investigate an accident or why a design failed to provide the level of performance expected.

This subject is discussed in further detail in "Recommended Documentation Requirements for Projects Using Alternative Solutions in the Context of Objective-Based Codes," which was prepared for the CCBFC Task Group on Implementation of Objective-Based Codes and is available on NRC's Web site.

Private sewage disposal systems, 1.4.1.2.[A], 2.4.4.1.
Private use, 1.4.1.2.[A]
Private water supply system, 1.4.1.2.[A], 2.6.2.5.
Protection of piping, 2.3.5.
Public use, 1.4.1.2.[A]
Public washrooms, 2.2.2.5., 2.2.10.6.
Pumps for sumps, 2.4.6.3.
PVC (polyvinyl chloride) pipe and fittings, 2.2.5.6., 2.3.4.5.

## R

Rainfall, and hydraulic load, 2.4.10.4.
Rainwater tanks, overflows, 2.4.2.2.
Receiving tanks, 2.4.6.3.
Reducer fittings, 2.3.3.5.
Reducing valves, 2.2.10.12.
Referenced documents, 1.3.1., 1.5.1.[A]
Relief valves
discharge pipe, 2.6.1.7.
specifications, 2.2.10.11.
where required, 2.6.1.7.
Relief vents
connections, 2.5.3.1., 2.5.6.4., 2.5.7.3.
definition, 1.4.1.2.[A]
offset, 1.4.1.2.[A], 2.5.1.1., 2.5.4.4., 2.5.4.5., 2.5.7.4., 2.5.8.5.
sizing, 2.5.7.3., 2.5.8.5.
for traps, 2.5.1.1.
Residential full flow-through fire sprinkler/standpipe system, 1.4.1.2.[A], 2.6.2.4.
Residential partial flow-through fire sprinkler/standpipe system, 1.4.1.2.[A], 2.6.2.4.

Risers
definition, 1.4.1.2.[A]
shut-off valves, 2.6.1.3.
Roof drains
connections to leaders, 2.3.3.7.
definition, 1.4.1.2.[A]
flow control, 2.4.10.4.
Roof gutters, 1.4.1.2.[A], 2.4.10.10.
Roofs, hydraulic load from, 2.4.10.4.
Rubber gasket joints, 2.2.5.1., 2.2.6.4.

## S

Saddle hubs or fittings, 2.2.10.5.
Sanitary building drains (see also Building drains) definition, 1.4.1.2.[A]
Sanitary building sewers (see also Building sewers) definition, 1.4.1.2.[A]
Sanitary drainage systems, 1.4.1.2.[A], 2.4.2.1., 2.4.4.1., 2.4.4.4., 2.4.7.1.
connections, 2.1.2.1.
Sanitary sewers, 1.4.1.2.[A]
Sanitary T fittings, 2.2.4.2.
Scope of Code, 1.3.1.[A]
Screwed cast-iron water fittings, 2.2.6.5.
Screwed joints, 2.3.2.3.
Screwed malleable iron water fittings, 2.2.6.6.
Screws, 2.2.10.2.
Service piping, 1.4.1.2.[A], 2.1.2.4.
Service water heaters, 1.4.1.2.[A], 2.6.1.7., 2.6.1.12.
Sewage
cooling of, 2.4.4.2.
definition, 1.4.1.2.[A]
including corrosive or acid waste, 2.4.4.4., 2.5.5.3.
including fats, oils or grease, 2.4.4.3.
including oil or gasoline, 2.4.4.3.
including sand or grit, 2.4.4.3.
received by sumps or tanks, 2.4.6.3. treatment, 2.4.4.1.
Sewage disposal system, private, 1.4.1.2.[A], 2.4.4.1.
Sewage sumps, venting, 2.5.5.1., 2.5.7.7.
Sewers (see Building sewers)
Sheet metal leaders, 2.2.6.9.
Showers and shower heads
construction and arrangement, 2.2.2.3.
hydraulic loads, 2.6.3.2.
size of fixture outlet pipes, 2.4.9.3.
sizing of water distribution systems, 2.6.3.2.
temperature control, 2.2.10.7.
traps, 2.4.5.1.
water flow rates, 2.2.10.6.
Shut-off valves, 2.4.6.3., 2.6.1.3.
Sinks
dishwashing and food preparation, 2.2.2.4.
hot water temperature, 2.2.10.7.
size of outlet pipes, 2.4.9.3.
sizing of water distribution systems, 2.6.3.2.
traps, 2.2.3.1., 2.4.5.1.
Size
building drains, 2.4.9.4.
building sewers, 2.4.9.4.
cleanouts, 2.4.7.2.
definition, 1.4.1.2.[A]
drainage pipes, 2.4.9.
fixture outlet pipes, 2.4.9.3.
leaders, 2.4.9.5.
vent pipes, 2.5.7., 2.5.8.
water distribution systems, 2.6.3.2.
water service pipes, 2.6.3.4.
water supply pipes, 2.6.3.
Slip joints, 2.3.3.4.
Slope of drainage pipes, 2.4.8.1.
Soil-or-waste pipes
connections, 2.4.2.1.
definition, 1.4.1.2.[A]
drawings for plumbing permit, 2.2.2.1.[C]
lead, 2.2.7.8., 2.3.4.5.
location, 2.4.6.2.
size, 2.4.9.1.
Soil-or-waste stacks
cleanouts, 2.4.7.1.
definition, 1.4.1.2.[A]
hydraulic loads, 2.4.10.6.
size, 2.4.9.2.
vent pipes, 2.5.4.
as wet vents, 2.5.2.1.
Soil pipe, cast-iron, 2.2.6.1., 2.3.3.3., 2.3.4.5.
Solar domestic hot water systems, 2.2.10.13., 2.6.1.8.
Soldered joints, 2.3.2.4.
Solder-joint fittings, 2.2.7.5., 2.2.7.6.
Solders, 2.2.9.2.
Solvent cement, 2.2.5.9., 2.2.5.10.
Sprinkler/standpipe systems, 1.4.1.2.[A], 2.6.2.4., 2.6.3.1.

Stacks, hydraulic loads, 2.4.10.6.
Stack vents
definition, 1.4.1.2.[A]
length, 2.5.8.3.
size, 2.4.7.4., 2.5.7.2., 2.5.8.4.
for soil-or-waste stacks, 2.5.4.1.
for traps, 2.5.1.1.
Stainless steel butt weld pipe fittings, 2.2.6.11.
Stainless steel fixtures, 2.2.2.2.
Stainless steel pipe, 2.2.6.10., 2.2.6.15., 2.3.4.5.
Stainless steel pipe flanges, 2.2.6.12.
Stainless steel threaded fittings, 2.2.6.13.
Stainless steel tube, 2.2.6.14., 2.2.6.15., 2.3.4.5.
Stainless steel welded joints, 2.3.2.8.
Standpipe system, 1.4.1.2.[A]
Static pressure, 2.6.3.3.
Steel pipe
corrugated, 2.2.6.8.
galvanized, 2.2.6.7., 2.3.3.3., 2.3.4.5.
stainless, 2.2.6.10.
welded and seamless, 2.2.6.7.
Stop-and-waste cocks, 2.6.1.4.
Storage-type service water heaters, 1.4.1.2.[A], 2.6.1.7., 2.6.1.12.

Storey, definition, 1.4.1.2.[A]
Storm building drains (see also Building drains), 1.4.1.2.[A], 2.4.5.2., 2.4.10.9.

Storm building sewers (see also Building sewers),
1.4.1.2.[A], 2.4.5.2., 2.4.10.9.

Storm drainage systems
cleanouts, 2.4.7.1.
connections, 2.1.2.2., 2.4.2.1.
definition, 1.4.1.2.[A]
design, 2.4.10.13.
hydraulic loads, 2.4.10.9.
sizing, 2.4.10.
sumps, 2.4.6.3.
traps, 2.4.5.2.
Storm sewers, 1.4.1.2.[A], 2.4.10.13.
Storm water, 1.4.1.2.[A], 2.1.2.2., 2.4.2.1., 2.4.6.1., 2.5.6.5.

Stubs, lead, water closet, 2.3.3.8., 2.4.2.1.
Subsoil drainage pipes
connections, 2.4.5.3., 2.4.6.4.
definition, 1.4.1.2.[A]
Suds pressure zones, 2.4.2.1.
Suites, 1.4.1.2.[A], 2.6.1.3.
Sumps
arrangement of drainage piping, 2.4.6.3.
elevator pits, 2.4.3.6.
venting, 2.5.5.1., 2.5.7.7.
Supply and waste fittings, 2.2.10.6.
Supports for piping, 2.3.4.
Symbols, 1.4.2.1.[A]
Systems, characteristics, 1.2.2.1.[A]

Tanks (drainage), 2.4.6.3.
Tee joints, extracted, 2.3.3.2.
Temperature limit controls, 2.2.10.7., 2.6.1.7., 2.6.1.12.
Temperature-relief valves
specifications, 2.2.10.11.
where required, 2.6.1.7.
Terminals, vent pipes, 2.5.6.5., 2.5.9.1.
Testing
drainage and venting systems, 2.3.6.
potable water systems, 2.3.7.
T fittings, 2.2.4.1., 2.2.4.2.
Thermal expansion of piping, 2.3.3.9., 2.6.1.11.
Thermostatic valves, 2.2.10.7.
Threaded cast-iron drainage fittings, 2.2.6.3.
Transition solvent cement, 2.2.5.9.
Trap arms, 1.4.1.2.[A], 2.5.2.1., 2.5.4.5., 2.5.6.3.
Trap dips, 1.4.1.2.[A], 2.4.7.1.
Traps
bell, 2.2.3.1.
cleanouts, 2.2.3.1., 2.4.5.4., 2.4.7.1.
connections, 2.2.3.1.
definition, 1.4.1.2.[A]
design, 2.2.3.1.
drawings for plumbing permit, 2.2.2.1.[C]
drum, 2.2.3.1.
for fixtures, 2.4.5.1.
interceptors used as, 2.4.5.1.
for leaders, 2.4.5.2.
location, 2.4.5.4.
materials, 2.2.3.1.
restricted locations, 2.4.3.2.
for sanitary drainage systems, 2.4.4.4., 2.4.5.1.
seals, 2.4.5.5.
for storm drainage systems, 2.4.5.2.
for subsoil drains, 2.4.5.3.
tubular, 2.2.3.3.
venting, 2.5.1., 2.5.6.3.
Trap seal depth, 1.4.1.2.[A], 2.2.3.1.
Trap seals
maintaining, 2.4.5.5.
size, 2.2.3.1.
Trap standards
definition, 1.4.1.2.[A]
installation, 2.3.3.8.
trap arms, 2.5.6.3.
Trap weirs, 1.4.1.2.[A], 2.3.3.4., 2.4.9.3.
Treatment of sewage and wastes, 2.4.4.
Trenchless technology, 2.2.5.4.
Tube
Tube
copper, 2.2.7.4., 2.3.3.2., 2.3.3.10., 2.3.4.5.
stainless steel, 2.2.6.14., 2.2.6.15., 2.3.4.5.
Tubing (see Piping)

Underground pipes
copper joints, 2.3.3.12.
protection, 2.3.5.1.
support, 2.3.4.6.
Unions, 2.3.3.4., 2.4.6.3.
Urinals
connections, 2.3.3.8.
flushing devices, 2.6.1.6.
hydraulic loads, 2.6.3.2.
location, 2.4.3.1.
size of fixture outlet pipes, 2.4.9.3.
Used materials and equipment, 1.2.2.2.[A], 2.2.1.2.

Vacuum breakers (see also Back-siphonage preventers), 2.6.2.10.
Vacuum-relief valves, 2.2.10.11.
Valves
air admittance, 1.4.1.2.[A], 2.2.10.16., 2.5.9.
backflow preventers, 1.4.1.2.[A], 2.2.10.10., 2.6.1.11.,
2.6.2.1., 2.6.2.2., 2.6.2.12.
backwater, 1.4.1.2.[A], 2.4.2.1., 2.4.3.6., 2.4.6.3., 2.4.6.4.
check, 1.4.1.2.[A], 2.4.2.1., 2.4.6.3., 2.6.1.5., 2.6.1.11.
direct flush, 2.2.10.8.
gate, 2.4.6.4.
pressure-reducing, 2.6.1.11., 2.6.3.3.
pressure-relief, 2.2.10.11., 2.6.1.7.
reducing, 2.2.10.12.
showers, 2.2.10.6., 2.2.10.7.
shut-off, 2.4.6.3., 2.6.1.3.
tank-type water closet, 2.6.2.11.
temperature-relief, 2.2.10.11., 2.6.1.7.
vacuum-relief, 2.2.10.11., 2.6.1.7.
Velocity, water service pipes, 2.6.3.5.
Vent headers, 1.4.1.2.[A], 2.5.1.1., 2.5.7.2., 2.5.8.3.
Ventilation of rooms, 2.1.3.1.
Venting
circuit, 2.5.3.
corrosive drain piping, 2.5.5.3.
dilution tanks, 2.5.5.3.
floor drains, 2.5.1.1.
interceptors, 2.5.5.2.
sewage sumps, 2.5.5.1.
wet, 2.5.2., 2.5.8.1.
Venting systems
definition, 1.4.1.2.[A]
design and installation, 2.5.
testing, 2.3.6.
Vent pipes
arrangement, 2.5.6.
cast-iron, 2.2.6.1.
connections, 2.5.6.2.
definition, 1.4.1.2.[A]
for dilution tanks, 2.5.7.7.
drainage, 2.5.6.1.
drawings for plumbing permit, 2.2.2.1.[C]
flashing, 2.2.10.14.
location, 2.5.6.3.
for macerating toilets, 2.5.7.7.
for manholes, 2.5.7.6.
miscellaneous, 2.5.5.
for sewage sumps, 2.5.7.7.
sizing, 2.5.7., 2.5.8.
for soil-or-waste stacks, 2.5.4.
suds pressure zones, 2.4.2.1.
support above roof, 2.3.4.7.
terminals, 2.5.6.5.
for traps, 2.5.1.1.
Vents
additional circuit, 1.4.1.2.[A], 2.5.1.1., 2.5.3.1., 2.5.4.5., 2.5.7.3., 2.5.8.5.
branch, 1.4.1.2.[A], 2.5.1.1., 2.5.7.2., 2.5.8.3.
circuit, 1.4.1.2.[A], 2.5.1.1., 2.5.3.1., 2.5.4.5., 2.5.7.3., 2.5.8.3.
continuous, 1.4.1.2.[A], 2.5.1.1., 2.5.2.1., 2.5.8.3.
dual, 1.4.1.2.[A], 2.5.1.1., 2.5.8.2., 2.5.9.1.
individual, 1.4.1.2.[A], 2.5.1.1., 2.5.8.2., 2.5.8.3., 2.5.9.1.
offset relief, 1.4.1.2.[A], 2.5.1.1., 2.5.4.4., 2.5.4.5., 2.5.7.4., 2.5.8.5.
relief, 1.4.1.2.[A], 2.5.1.1., 2.5.3.1., 2.5.6.4., 2.5.7.3., 2.5.8.5.
stack, 1.4.1.2.[A], 2.5.1.1., 2.5.4.1., 2.5.7.2., 2.5.8.4.
wet, 1.4.1.2.[A], 2.5.1.1., 2.5.2.1., 2.5.8.1.
yoke, 1.4.1.2.[A], 2.5.1.1., 2.5.4.3., 2.5.4.5., 2.5.7.5., 2.5.8.5.

Vent stacks
definition, 1.4.1.2.[A]
sizing, 2.5.7.2., 2.5.8.4.
for soil-or-waste stacks, 2.5.4.2. for traps, 2.5.1.1.
Vertical piping, support, 2.3.4.4.
Vitreous china fixtures, 2.2.2.2.
Vitrified clay pipe and fittings, 2.2.5.2.

## $M$

Washers, 2.2.10.2.
Washing machines, 2.4.5.1., 2.4.9.3., 2.6.3.2.
Waste, cooling, 2.4.4.2.
Waste pipes (see Soil-or-waste pipes)
Water closets
fixture drains, 2.3.3.8.
floor- or wall-mounted bowls, 2.3.4.1.
flushing devices, 2.6.1.6.
hydraulic loads, 2.6.3.2.
in public washrooms, 2.2.2.5.
screws, bolts, nuts and washers, 2.2.1.2.
size of pipes serving, 2.4.9.2., 2.4.9.3.
tank-type, 2.6.2.11.
trap arms, 2.5.6.3.
Water coolers, 2.6.3.2.
Water distribution systems, 1.4.1.2.[A], 2.1.2.3., 2.6.1.2.
Water flow rates, 2.2.10.6.
Water hammer arresters, 2.2.10.15.
Water hammer, prevention, 2.6.1.9.
Water heaters
indirect service, 1.4.1.2.[A], 2.6.1.7., 2.6.1.12.
storage-type, 1.4.1.2.[A], 2.6.1.7., 2.6.1.12.
Water pipes
CPVC, 2.2.5.7.
polyethylene, 2.2.5.3.
PVC, 2.2.5.6.
size and capacity, 2.6.3.
Water pressure tests, 2.3.6.1. - 2.3.6.4., 2.3.7.1. - 2.3.7.3.
Water service pipes
definition, 1.4.1.2.[A]
mobile home, 2.6.1.10.
sizing, 2.6.3.4.
velocity, 2.6.3.5.
working pressure, 2.2.1.6.
Water supply
auxiliary, 1.4.1.2.[A]
design, fabrication and installation, 2.6.3.1.
private, 1.4.1.2.[A], 2.6.2.5.
protection, 2.6.1.4.
separation of public and private systems, 2.6.2.5.
Water systems, 1.4.1.2.[A]
Water temperature control, 2.2.10.7.
Water treatment devices, 2.2.10.17., 2.6.2.1.
Water usage per flush cycle, 2.6.1.6.
Welded joints
restrictions on use, 2.3.3.3.
stainless steel, 2.3.2.8.
Welded and seamless steel pipe, 2.2.6.7.
Wet venting, 2.5.2., 2.5.8.1.
Wet vents, 1.4.1.2.[A], 2.5.1.1., 2.5.2.1., 2.5.8.1.
Wiped joints, 2.3.2.2.

Yoke vents
definition, 1.4.1.2.[A]
for fixtures draining into vent pipes, 2.5.4.5. sizing, 2.5.7.5., 2.5.8.5.
for soil-or-waste stacks, 2.5.4.3.
for traps, 2.5.1.1.
z

Zinc, alloyed, 1.4.1.2.[A], 2.2.10.14.

## Symbols and Abbreviations

## Conversion Factors

| To Convert | To | Multiply by |
| :---: | :---: | :---: |
| ${ }^{\circ} \mathrm{C}$ | ${ }^{\circ} \mathrm{F}$ | 1.8 and add 32 |
| kg | lb . | 2.205 |
| $\mathrm{kg} / \mathrm{m}^{3}$ | lbf/ft. ${ }^{3}$ | 0.06243 |
| kN | lb . | 224.81 |
| kN/m | lbf/ft. | 68.52 |
| kN/m ${ }^{3}$ | lbf/ft. ${ }^{3}$ | 6.360 |
| kPa | lbf/in. ${ }^{2}$ (psi) | 0.1450 |
| kPa | $\mathrm{lbf} / \mathrm{ft} .^{2}$ | 20.88 |
| L | gal. (imp.) | 0.2200 |
| L/s | gal./min (gpm) | 13.20 |
| m | ft . | 3.281 |
| $\mathrm{m}^{2}$ | $\mathrm{ft} .^{2}$ | 10.76 |
| mm | in. | 0.03937 |
| $\mathrm{m} / \mathrm{s}^{2}$ | $\mathrm{ft} / \mathrm{s}^{2}$ | 3.281 |

[^0]:    (1) The National Model Codes are now collectively referred to as "Codes Canada."

[^1]:    These Notes are included for explanatory purposes only and do not form part of the requirements. The number that introduces each Note corresponds to the applicable requirement in this Part.
    The figures are schematic only; they depict various parts of the plumbing system but do not include details. For an explanation of the symbols and abbreviations used in the figures, refer to the list provided at the end of the Code.

[^2]:    These Notes are included for explanatory purposes only and do not form part of the requirements. The number that introduces each Note corresponds to the applicable requirement in this Part.

[^3]:    These Notes are included for explanatory purposes only and do not form part of the requirements. The number that introduces each Note corresponds to the applicable requirement in this Part.

[^4]:    These Notes are included for explanatory purposes only and do not form part of the requirements. The number that introduces each Note corresponds to the applicable requirement in this Part.

[^5]:    [A] - Reference occurs in Division A. [C] - Reference occurs in Division C. All other references occur in Division B.
