ACKNOWLEDGEMENTS

The following personnel assisted in the field work; C. Jackson, K. Johnson, P. Munro, D. Schmidt and S. Sheehan. The report was typed by B. Mathias and J. Poulin. We thank the officers and men of the M.V. *Theta* and M.V. *Pandora II* for their cooperation during the two years and finally we wish to acknowledge the logistic support and accommodation provided by Polar Continental Shelf Project.

1. SUMMARY

Two cruises have been made to the Southern Beaufort Sea to collect chemical baseline data. Measurements have been made on hydrocarbon levels (Wong et al., 1976, Macdonald, 1976), suspended particulates (Matsumoto and Wong, 1977), reactive nutrients, dissolved oxygen, temperature and salinity. The primary objective of the survey was to establish the baseline levels of marine hydrocarbons in the Beaufort Sea drilling area by measuring classes of hydrocarbons and identifying some specific hydrocarbons in seawater, marine sediments, marine organisms, marine mammals and fish. That data has been summarized elsewhere (Wong et al., 1976) and this companion data report provides the accompanying information on reactive nutrients (silicate, phosphate and nitrate), dissolved oxygen, salinity and temperature.

The first cruise was carried out on M.V. *Theta* in the summer of 1974 (Aug 11-Sept 1) and the second on M.V. *Pandora II* in the summer of 1975 (Aug 2-25).

2. INTRODUCTION

The observations made or types of samples collected at each station are summarized in Table 1. Table 2 and Table 3 (headed by a listing of station locations) summarize the measurements made on temperature, salinity, dissolved oxygen, and the reactive nutrients; phosphate, silicate and nitrate. The objective of the observations reported here was to provide a description of the chemical oceanography of the drilling area in the Southern Beaufort Sea. Due to heavy ice conditions in 1974 the area of coverage was limited, but much more favourable ice conditions were encountered in 1975 and that is reflected in the station locations (Figure 1 and 2). Station locations were determined by DECCA within an ellipse of error (95%) whose critical dimension was about 2000m (Huggett and Mortimer, 1971).

3. SAMPLE COLLECTION AND STORAGE

Water samples were collected with PVC Niskin bottles (1.7 or 5 litre capacity). Bottles were closely spaced in the top 30 metres or so since sharp gradients in most of the water properties occurred there, due to the estuarine nature of the region.

3.1 1974

A total of 35 stations were occupied with one being a 25 hour time series station (Table 2). At 11 stations, only samples for hydrocarbon determination were drawn. At the remaining stations, regular bottlecasts were made and samples were drawn for dissolved oxygen, salinity, alkalinity, reactive nutrients and particulate silicates (top 7 m only). Data from these stations are listed in Table 2b. Five litre PVC Niskin bottles were used at 1, 3, 5 and 7 metres with 1.7 litre bottles being used at great depths. A plastic bucket was used to collect surface samples. Some nutrient, salinity and all

oxygen samples were analyzed on board ship with the remaining samples being stored for analyses in Victoria.

Where more detail in sampling methods is sought, the reader is referred to the Ocean Chemistry sampling manual (Wong et al., 1976). Oxygen samples were drawn first by sampling into a calibrated 125 mL Erlenmeyer flask. They were "pickled" immediately with manganous chloride and alkaline iodide solutions and analyzed generally within one day. Salinity samples were stored in twice rinsed 300 mL screw cap glass bottles. Nutrient samples were stored in 15 mL screw-cap vials twice rinsed with the sample prior to filling. Silicate and nitrate samples were stored in plastic, phosphate in glass. Samples from the top 7 m which were destined for filtration were initially drawn into polyethylene containers. Filtration was carried out under reduced pressure through 0.45 μm average pore diameter Millipore Type HA membrane filters. This process may have introduced small amounts of nitrate by leaching the mixed esters of cellulose in the filter (cf. Macdonald et al., 1978). Stainless steel filter holder assemblies were used to reduce the possibility of silicate contamination. The first 200 mL were used to rinse the apparatus and an additional 100-1000 mL were filtered depending on the quantity of suspended matter. All stored samples were frozen immediately after collection and analyzed approximately three months later. This process results in a slight increase in variance but generally representative samples (Macdonald & McLaughlin, 1980). Due to problems with polymer formation some silicate data points (low salinity) were lost.

3.2 1975

During this year, 38 stations were occupied (Table 3a) one of which was a time series. Sampling for nutrients, dissolved oxygen, salinity and temperature was carried out at all Stations (Table 3b). Sampling procedures

were the same as those used in 1974 with the following exceptions. Nutrient samples were analyzed unfiltered on-board ship. Samples from stations 1-9 were quick frozen and analyzed one week after collection. The remaining samples were kept in a cool, dark place and analyzed within six hours of collection. The immediate analysis offers some improvement in reliability (variance) of sample determination and avoids problems of silicate polymerization during freezing (Macdonald and McLaughlin, 1980, Burton et al., 1970).

4. ANALYSES

Salinity was determined with an Autolab Model 601 Mark III bench salinometer standardized with Copenhagen water.

Oxygen determinations were made by a Micro Winkler Titration Procedure similar to that described by Carritt and Carpenter (1966). The percent saturation was calculated by using the formula given by Weiss (1970) for oxygen solubility as a function of temperature and salinity.

The nutrients reactive nitrate, phosphate and silicate were determined with a Technicon Autoanalyzer II at a rate of 20 samples per hour using Industrial Methods No's 186-72 W, 158-71 W and 155-71 W (Technicon Corp.). Nitrate values reported here are uncorrected for nitrate and refer to nitrate plus nitrite.

Temperatures were measured by protected reversing thermometers with two to a bottle. Unprotected thermometers were added to bottles for deep water samples. Some difficulty was encountered with the reversing thermometers at low temperature, but the wide range (-2 to 20°C) performed better than the narrow range ones (-2 to 4°C).

The estimated accuracies and precisions of the various measurements are listed in Table 4.

TABLE 1
OBSERVATIONS OR TYPES OF SAMPLES COLLECTED IN SOUTHERN BEAUFORT SEA

Type of Samples or Observations	Year	Station Number	Method of Storage and/or Analysis
1. Temperature T°C	1974	1,2,7,11,13,19,20,23, 25,28,36,38,41,42,43, 44,46,48,51,54,55,56, 57,60.	Seawater collected in 1.7 l Niskin samplers; shipboard readings by reversing thermometers.
	1975	1,2,3,4,5,6,7,8,9,10, 11,12,13,14,15,16,17, 18,19,20,21,22,23,24, 25,26,27,28,29,30,31, 32,33,34,35,36,37,38, 39,40,41,42,43,44,45, 46,47,48.	
2. CTD cast	1974		
	1975	10,12,14,18,19,23,24, 28,29,33.	Shipboard direct readings; conductivity, temperature, depth probe.
3. Salinity	1974	1,2,7,11,13,19,20,23, 25,28,36,38,41,42,43, 46,48,51,54,55,56,57, 60.	Collected in 1.7 l Niskin samplers; shipboard analysis with an Autolab Model 601 Mark III Salinometer.
	1975	1,2,3,4,5,6,7,8,9,10, 11,12,13,14,15,16,17, 18,19,20,21,22,23,24, 25,26,27,28,29,30,31, 32,33,34,35,36,37,38, 39,40,41,42,43,44,45, 46,47,48.	

TABLE 1 (continued)

Type of Samples or Observations	Year	Station Number	Method of Storage and/or Analysis
4. Dissolved Oxygen	1974	1,2,7,11,13,20,23,25, 28,36,38,41,42,43,46, 48,51,54,55,56,57,60.	Collected in 1.7 l Niskin samplers; ship- board analysis by Micro-Winkler technique.
	1975	1,2,3,4,5,6,7,8,9,11, 13,15,16,17,20,21,22, 25,26,27,30,31,32,34, 35,36,37,38,39,40,41, 42,43,44,45,46,47,48.	
5. Hydrocarbons (Low Molecular Wt.)	1974	7,11,19,20,23,24,27, 28,30,32,35,37,39,42, 44,47,48,49,51.	Collected in 5 l Blumer samplers with glass liners; shipboard analysis by gas chroma- tograph.
	1975	1,2,3,4,5,6,7,8,9,11, 13,15,16,17,20,21,22, 25,26,27,30,31,32,34, 35,36,37,38,39,40,41, 42,43,44,45,46,47,48.	
6. Hydrocarbons (High Molecular Wt.)	1974	1a,1,2,7,11,19,20,23, 24,25,27,30,32,35,37, 39,42,44,47,49,51.	Collected in 5 l Blumer samplers with glass liners; stored in same liners.
	1975	1,2,3,4,5,6,7,8,9,11, 13,15,16,17,20,21,22, 25,26,27,30,31,32,34, 35,36,37,38,39,40,41, 42,43,44,45,46,47,48.	Partial shipboard sample processing; some samples stored in 5 l glass liners.
7. Alkalinity	1974	1,2,7,11,13,19,20,23, 25,28,36,38,41,42,43, 44,46,48,51,54,56,57, 60..	Collected in 1.7 l Niskin samplers; stored in portable cold room at 4°C.
	1975	1,2,3,4,5,6,7,8,9,11, 13,15,16,17,20,21,22, 25,26,27,30,31,32,34, 35,36,37,38,39,40,41, 42,43,44,45,46,47,48.	

TABLE 1 (continued)

Type of Samples or Observations	Year	Station Number	Method of Storage and/or Analysis
8. Reactive Nutrients (Phosphate, silicate, & nitrate)	1974	1,2,7,11,13,19,20,23, 25,28,36,38,41,42,43, 44,46,48,51,54,55,56, 57,60.	Collected in 1.7 l Niskin samplers; samples in triplicate; one set for shipboard analysis, and two sets stored frozen.
	1975	1,2,3,4,5,6,7,8,9,11, 13,15,16,17,20,21,22, 25,26,27,30,31,32,34, 35,36,37,38,39,40,41, 42,43,44,45,46,47,48.	
9. Particulate Silicate	1975	1,2,3,4,5,6,7,8,9,11, 13,15,16,17,20,21,22, 25,26,27,30,31,32,34, 35,36,37,38,39,40,41, 42,43,44,45,46,47,48.	Collected in 5 l Niskin samplers; filtered on board, filters stored frozen.
10. Trace metals in particulates	1975	1,2,3,4,5,6,7,8,9,11, 13,15,16,17,20,21,22, 25,26,27,30,31,32,34, 35,36,37,38,39,40,41, 42,43,44,45,46,47,48.	Collected in 5 l Niskin samplers; filtered on board, filters stored frozen.
11. Total Mercury	1975	1,2,3,4,5,6,7,8,9,11, 13,15,16,17,20,21,22, 25,26,27,30,31,32,34, 35,36,37,38,39,40,41, 42,43,44,45,46,47,48.	Collected in acid-washed 5 l Niskin samplers; shipboard analysis.
12. Sediments	1974	1,2,11,12,13,17,19,20, 23,25,28,35,41,42,44, 48,54.	Surface sediments collected by pipe dredge, cores by gravity corer; stored frozen.
	1975	1,2,3,4,5,6,7,8,9,11, 13,15,16,17,20,21,22, 25,26,27,30,31,32,34, 35,36,37,38,39,40,41, 42,43,44,45,46,47,48.	
13. Plankton	1974	12,39.	Surface plankton collected by net tows, subsurface plankton by Miller net tows; stored frozen in aluminum cans; biological identification samples preserved by formalin.
	1975	1,2,3,4,5,6,7,8,9,11, 13,15,16,17,20,21,22, 25,26,27,30,31,32,34, 35,36,37,38,39,40,41, 42,43,44,45,46,47,48.	

TABLE 1 (continued)

Type of Samples or Observations	Year	Station Number	Method of Storage and/or Analysis
14. Particle size distribution	1975	1,2,3,4,5,6,7,8,9,11, 13,15,16,17,20,21,22, 25,26,27,30,31,32,34, 35,36,37,38,39,40,41, 42,43,44,45,46,47,48.	Collected in 1.7 l Niskin samplers; ship- board analysis with a Coulter Counter.
15. Vanadium	1975	1,2,3,4,5,6,7,8,9,11, 13,15,16,17,20,21,22, 25,26,27,30,31,32,34,3 35,36,37,38,39,40,41, 42,43,44,45,46,47,48.	Collected in acid- washed 5 l Niskin samplers; processed on board; ion-exchange columns stored frozen.
