

Summary

November 1996

Monthly review of Canadian climate and water

vol. 1

18th & 19th – Mild air spreads into the High Arctic. Eureka's -4.4 ° on the 18th is surpassed the next day by a value of -2.9 °, the second warmest November temperature on record.

25th – A fresh surge of cold air pushes its way into the northwest, resulting in November's coldest temperature: -43 ° at Dawson.

24th – The early deep freeze results contributes to an ice buildup on the Nechako River above Prince George. The following day the water level rises two metres between noon and 2:00 p.m., prompting the use of sandbags to prevent flooding. On the 28th, the river jumps its banks, flooding low-lying industrial and residential areas. The flood waters don't fully recede until the first few days of December.

19th & 20th – A metre of snow falls at Fernie, while double that figure is received in the mountains near the town. So much accumulates that the opening of ski resorts in the area has to be delayed.

16th – The first major snowstorm of the season hits the Lower Mainland, creating the usual assortment of road closings, traffic accidents, and power outages. Only 2 cm falls at Vancouver Airport, but farther to the east massive amounts are recorded. At Abbotsford 35 cm blankets the community, making this the snowiest November day on record. Almost doubling that total, Chilliwack receives 68 cm, the city's greatest one-day snowfall ever.

It's an early start to winter in Alberta as below-normal temperatures and frequent snowfalls dominate the month's weather. Edmonton receives almost 70 cm, making this the second-snowiest November on record. As well, an early cold spell from the 8th to the 26th, during which the mercury drops to 34 °, drags the mean temperature for the month below 12 °, making this the city's fifth-coldest November. The buildup of snow forces the city to break its snow-clearing policy by ploughing sidestreets, adding another million dollars to its already-overextended snow-removal budget. Heavy snow and frigid conditions also extend into the southern half of the province. The 42 cm that falls on Calgary is more than two and a half times the normal, and rates as the heaviest one-month snow in over 15 years.

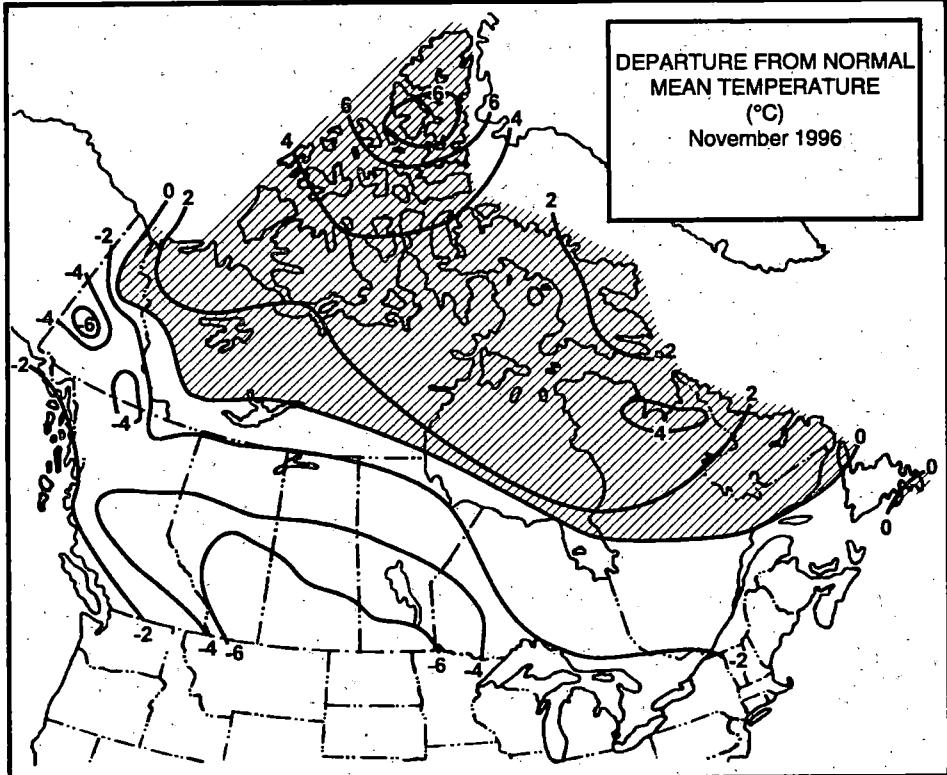

15th & 16th – Heavy snow falls in southeastern Manitoba and northwestern Ontario. Up to 30 cm are recorded in Manitoba, shutting down the airport in Winnipeg and claiming partial responsibility for the deaths of three people shoveling driveways. East of the Manitoba-Ontario border heavier amounts, up to 50 cm near Kenora, force the closure of the Trans-Canada highway. Red Lake's 60 cm contributes to a November total of 109 cm, the town's greatest one-month amount ever recorded.

20th – Heavy snows mark the arrival of extremely cold air in southern Saskatchewan. Although road conditions are quite treacherous most accidents result in only minor damage. Five days later the temperature in Regina drops to -35 °, the city's coldest November temperature since 1911.

8th & 9th – An unusually warm air mass covers much of eastern Canada. From Quebec's Eastern Townships to Newfoundland temperatures reach well into the teens. At Sherbrooke a daytime high of 22 ° on the 8th is the warmest temperature in the country this month.

9th & 10th – An exceptionally heavy rainfall of over 150 mm falls in the area from Montreal to near Quebec City. Over 1,000 people are forced from their homes because of flooding and many roads sustain heavy damage. As well, two trains derail near Shawinigan and Trois-Rivières. Farther east, where rainfall amounts are in the 30 to 60 mm range, the bridge over Highway 170 at Petit-Saguenay is washed out for the third time this year. Early estimates of damage from this storm are in the millions of dollars.

CANADIAN CLIMATE SUMMARY VOLUME 1

Climatic Summary is a monthly publication (disponible aussi en français) of the Canadian Meteorological Centre, Atmospheric Environment Service, 4905 Dufferin St., Downsview, Ontario, Canada M3H 5T4

The data in this publication are based on unverified reports from approximately 225 Canadian synoptic weather stations. Articles do not necessarily reflect the views of the Department.
