ABSTRACT

The bibliography lists all snow and ice studies in Canada published or printed in 1975. References are given under the following major subject headings - general glaciology; glaciological instruments and methods; physics of ice; land ice, glaciers, ice shelves; icebergs, sea, river and lake ice; glacial geology; frost action on rocks and soil, frozen ground, permafrost; meteorological and climatological glaciology; snow. A geographical and an author index are also provided.

RÉSUMÉ

La présente bibliographie fournit une liste de toutes les études de la neige et de la glace menées au Canada et publiées ou imprimées en 1975. Les références figurent sous les rubriques des principaux thèmes suivants, soit - glaciologie générale; instruments et méthodes de glaciologie; physique de la glace; glace de sol, glaciers, shelf (glacier flottant); icebergs, glace de mer, de rivière et de lac; géologie glaciaire; effets du givre sur les roches et sur le sol, terrain gelé, pergélisol; glaciologie météorologique et climatologique; neige. La bibliographie renferme, en outre, un index géographique et un index des auteurs.

INTRODUCTION

This bibliography, the first in an annual series, has been prepared in the hope that it will increase the information flow between Canadian glaciologists, reduce duplication, encourage co-operation and advertise to the world-at-large the contributions being made by Canadians to this science. Its preparation has been actively encouraged by the sub-committee on Glaciers of the National Research Council of Canada and the working group on Ice of the Canadian Advisory Committee on Remote Sensing.

The bibliography covers all snow and ice studies in Canada by any investigator: hence its scope is glaciological in the proper sense of the word. Some non-Canadian material is included if the originating scientists are resident in Canada. The subject categories are the same as those used by the International Glaciological Society in its "Glaciological Literature". Thus glacial geology is included because of the glaciological implications.

Authors are requested to check their references for accuracy and completeness and return the form following Page 110 if appropriate. Material for inclusion in subsequent bibliographies should be sent to the compiler at the following address:

Glaciology Division,
Environment Canada,
Ottawa, Ontario, K1A 0E7

INTRODUCTION

Cette bibliographie, la première d'une série annuelle, a été préparée dans l'espoir d'améliorer l'échange d'information entre les glaciologues canadiens, de diminuer les risques de chevauchement, d'encourager la participation et de porter à la connaissance du public les contributions apportées par des Canadiens à cette science. Le Sous-comité des glaciers du Conseil national de recherches du Canada et le Groupe de travail sur la glace du Comité consultatif canadien de la télédétection ont fortement encouragé la rédaction de la présente bibliographie.

On énumère dans la bibliographie toutes les études de la neige ou de la glace menées au Canada par n'importe quel chercheur; on peut donc dire qu'elle traite de tout le domaine de la glaciologie. On y a inséré les titres d'études menées à l'extérieur du Canada si les chercheurs en question demeurent au Canada. Les thèmes à l'étude sont les mêmes qu'utilise la Société internationale de glaciologie dans l'ouvrage intitulé "Glaciological Literature". Ainsi, on y a inclu la géologie glaciaire à cause de ses incidences glaciologiques.

On demande aux auteurs de vérifier les titres de leurs études afin qu'on puisse les corriger s'il y a lieu. Au besoin, veuillez nous retourner la formule placée après la page 110. Tout document à inclure dans les prochaines bibliographies doit être envoyé au compilateur à cette adresse:
