

COMPENDIUM OF CANADA'S ENGAGEMENT IN INTERNATIONAL ENVIRONMENTAL AGREEMENTS

Letter of Intent related to efforts to promote Conservation of Bats in the United Mexican States, The United States of America, and Canada

SUBJECT CATEGORY:

Biodiversity/Ecosystems

TYPE OF AGREEMENT / INSTRUMENT:

Multilateral

FORM:

Cooperative Arrangement

STATUS:

- Signed by Canada April 16, 2015
- Ongoing cooperative arrangement through a Letter of Intent

LEAD & PARTNER DEPARTMENTS:

Lead: Environment and Climate Change Canada

Partners: US Fish and Wildlife Service, Mexican Secretaría de Medio Ambiente y Recursos Naturales de los Estados Unidos Mexicanos

COMPENDIUM EDITION:

February 2017

REFERENCE #:

M-BD-12/EN

OBJECTIVE

To strengthen cooperation, coordination and information sharing related to the conservation and management of all bat species in Canada, the USA and Mexico.

KEY ELEMENTS

Enhanced communication and information exchange on issues related to bat conservation.

Improved continental scale monitoring to identify population trends of bats and generate information needed to set priorities and evaluate conservation actions.

EXPECTED RESULTS

This agreement is expected to achieve common understanding of priority threats facing bats, and to promote more effective ways to address threats by sharing information among countries.

CANADA'S INVOLVEMENT

Several species of bats are listed under the Species at Risk Act in Canada. Development of recovery strategies and action plans for these species will benefit from the agreement.

Canada appoints one of the co-chairs to the North American Bat Conservation Alliance (NABCA), an informal alliance established to support the goals of the agreement by promoting communication among entities in all three countries engaged in bat conservation.

RESULTS / PROGRESS**Activities**

NABCA, with support from all three countries, consulted with >200 bat biologists across North America to develop a regionally prioritized list of threats to North American bats.

A Wiki page is now being developed to share information on strategies for addressing priority threats.

Reports

A summary report on the results of the threats assessment is now in preparation for scientific publication in 2017.

Canada reports back on progress each year through the Trilateral Committee.

Results

The North American Bat Conservation Alliance was formed in 2015, and engages many bat conservation experts throughout North America every year. The Steering Committee meets 3-5 times per year.
