## SMALL BUSINESS PROFILES

#### Abstract

Small Business. Profiles are a series of publications covering 108 kinds of small business in Canada, (see attached list). They open a statistical window on how a given industry operates in a given province or territory. Each profile contains six tables - selected operating ratios, financial ratios, balance sheet profiles, statement of changes in financial position, employment changes by size of business and selected operating characteristics of small businesses by sales quartile.

The profiles enable users to compare operating results (profits, expenses, sources of capital, etc) by kind of business, scale of operation (sales volume) and location of business. Such comparisons are a key component in the preparation of well conceived business plans, whether for new or growing enterprises.
Logging Industry ..... 0411

SHALL BUSHNESS OFFICE

TABLE 1. Selected operating ratios, in pereant of saies, 1987 .
Canada, Truck Transport Industries (SiC 455)

Symbola

- zero or no observations
- too snal! too be expressed
... not applicable
$\times$ confidential
Footnotas
(1) These ptinnes are basad on sempla of businesses papopting sales detwen $\$ 25,000$ asd $\$ 2,000,000$

12) Volue ia each celf $: \frac{\text { Total waighted gependiturt on given iten }}{\text { Total wighted sates of all businesses in the sample }} \times 100$. for each quartile.
(3) Value in each cell $=\frac{\text { Total wighted expenditure on a given itean }}{\text { Total waghted sales of businasses reporting this item of expenditura }} \times 100$ for each quartile.

This portion of the table pertains only to the businessas reporting the spacific expense iten. Therefore these ratios are calculated Individually and the total will not negesserliy qual $100 \%$.

Hotes
Ofta are shown by quartiles when at lenst i3 of the sempled ousinessas raport the specific iten.
Records wart ranked in ascanding order according to salas size. Each quartile li. e. botton 25z, lower midda 25z, etc. represents one quarter of the total number of businusses. Hithin each quartile, the average ratio is presented. for comparison purposes, the high and low values of sales are shown.

How to use the tebles
(t) Logate the appropriate sales range that is displayed on the two lines entitied tom sulas valuat and atigh sales valuen.

(3) Data pertaining to the selacted sales size pange will be in that quaptile.

Standard Industrial Clasification offaition iSIC 1980):
SIC 4560 - Truck Transport Industpy
Businesses primarily ongaged in the proviston of all types of trucking, transfer and ralated servicas. Truck broker-operatorsa are included in this industry.

III These estimates are based on a sample of incorporated businasses reporting sates betwan $\$ 25,000$ and $\$ 2,000,000$. Sample count includes only those businessas raporting's statement of changes.
set iabla 1 for symbols end notes.
TABLE 5. Employment changes by size of business. 1984-1987 based on SIC classification in ig87
Canada, Truck Transport Industries (SIE 456)

IIl Average iabour units ere calcuiated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Eaployment. Payroll and Hours. Stasistics Canada, Catalogue 72-002. An avarage labour unit could be interpreved as a lull-tine employee. Hote that the business sie groups used are deternined at the Caneda level. Thus if a business has as least 500 mployens in canade as a whole but tess than that number in any given province it is shown in the 500 and over group.
121 Refats to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the follewing year.
"Hewly redorting" and "no longer recorting" businesses are assumed to have been in activity tor six months and the information is adjusted accordingiy.
see lable 1 for symbols and notes.

## USER GUIDE SMALL BUSINESS PROFILES

A small business profile consists of a set of six tables containing selected expense and financial ratios, balance sheet and statement of changes in financial position, employment changes and operating data.

These Profiles enable users to compare key operating results by kind and location of business and scale of operation. Such comparisons are a key component of business plan preparation, evaluation of performance, as well as a tool to problem analysis.

## TO RRIEAD TMME TABLIES

SELECT THE PROFILE FOR THE APPROPRIATE INDUSTRY AND REGION

Each profile covers one industry in one province, one territory or in Canada as a whole.

## LOCATE THE APPROPRIATE SALES RANGE IDENTIFYING PROPER COLUMN OF DATA

Each table is divided into columns by sales range to allow users to pinpoint businesses of a specific size. Columns are identified at the top of each table by the lines entitled "Low Sales Value" and "High Sales Value" which define the lower and upper limits of the sales range.

All relevant data for a particular business in a given region are shown in the selected column (i.e. bottom $25 \%$, lower middle $25 \%$, upper middle $25 \%$ or top $25 \%$ ).

$$
\text { TARTES } 5 \text { AND } 6 \text { ARE SBLF TBAPLANATORY }
$$

It should be noted, however, that data contained in table 5 are derived from a different source (summary of wages and salaries by employers) than tables 1 to 4 and table 6, which are derived from tax returns submitted to Revenue Canada, Taxation.

A few examples of Profile use are demonstrated in the following pages. While the events and data are fictitious, the circumstances presented are common to many businesses.

Small Business Profile data facilitate risk analysis of loan applications reviewed by bank managers and credit officers.

Schooner and Associates Insurance Brokers, a small fictitious Vancouver insurance agency, applies for a $\$ 100,000$ bank loan to open a second branch. The Agency has a good reputation and has seen sales increase steadily since opening to \$250,000 in 1986.

Schooner and Associates Insurance Brokers' financial position can be compared with the industry average for businesses of similar size using tables 2 and 3 of the Profile on "Insurance and Real Estate Agencies - British Colombia".

Schooner and Associates Insurance Brokers' $\$ 250,000$ sales level falls into the range for the upper middle. $25 \%$ quartile. Exhibit A (on the next page) presents the data for analysis.

The profile data depict a relatively strong financial position for Schooner and Associates Insurance Brokers. The Agency's current and long term asset, and equity figures are higher than industry average. The Agency's greater ability to cover its short-term financial obligations is demonstrated by a stronger than average current ratio ( 2.1 vs 1.9 )

A more conservative than average debt ratio ( 0.4 vs 0.9 ) indicates Schooner and Associates Insurance Brokers' financial stability and its capacity to handle more debt.

While complete risk analysis must include other components, such as an evaluation of the potential market, the profile information fulfills a fundamental requirement of this type of analysis.

Insurance and Real Estate Agencies (SIC 7611) - British Columbia - 1986

| $\begin{gathered} \text { Balance Sheet Profile } \\ 1986 \\ \left.\begin{array}{cl} \text { (Table } & 2 \end{array}\right) \end{gathered}$ | (\$000's) |  |

| Current Ratio | 2.1 | 1.9 |
| Debt Ratio | 0.4 | 0.9 |

Small Business Profiles can assist in solving performance discrepancies by providing the information necessary to assess a financial position.

> Mr. Bolduc, owner of a Manitoba speciality food store (fictitious business) called "Spécialités Bolduc", is concerned about an increase in sales level and a corresponding decrease in profitability for 1986 . He wishes to assess his business financial performance in order to identify the source of the problem. Cost figures were therefore extracted from the company's accounts and compled in a series of ratios (as a percentage of sales) to facilitate the comparison.

This evaluation can be carried out using table 1 of the profile on "Specialty Food Stores Manitoba". As "Spécialités Bolduc's" 1986 sales of $\$ 225,000$ are in the $\$ 145,000$ $\$ 304,000$ range, the upper middle $25 \%$ quartile provides the relevant data for analysis. The following table provides the information necessary for comparison.

Speciality Food Stores (SIC 6012) - Manitoba - 1986

| Expense item (Table 1) | in percent of sales |  |  |
| :---: | :---: | :---: | :---: |
|  | Spécialités Bolduc | Industry Average. Upper middle 25\% | Reporting businesses only Uoper middle 25\% |
| Cost of Sales | 54.5 | 55.1 | 55.1 |
| Occupancy Expenses | 11.7 | 11.2 | 11.2 |
| Depreciation | 2.0 | 2.7 | 2.9 |
| Repairs \& Maintenance | 1.6 | 2.2 | 2.2 |
| Heat, Light \& Telephone | 2.0 | 2.2 | 2.2 |
| Rent | 6.1 | 4.0 | 6.0 |
| Personnel Expenses | 25.9 | 20.8 | 21.2 |
| Financial Expenses | 1.5 | 2.8 | 2.8 |
| Bank Interest \& Charges | 0.8 | 1.9 | 2.1 |
| Professional Fees | 0.7 | 0.9 | 1.0 |
| Other Expenses | 4.5 | 5.0 | 5.0 |
| Profit (loss) | 1.9 | 5.1 | 5.3 |

* It is noteworthy that the total for each expense category (i.e. financial expenses) does not necessarily equal the sum of its components (i.e. bank interest and charges plus professional fees) due to a variation in the number of businesses reporting a specific item.

The figures show that "Spécialités Bolduc's" operating profits as a percentage of sales are below industry average ( 1.9 vs 5.1 ). A comparison of cost ratios (as a percentage of sales) reveals that occupancy expenses (especially rental costs) and personnel expenses are higher than average.

When the sample used for comparison included those businesses reporting the item expenditure only, "Spécialités Bolduc's" costs can be more in line with the industry. Rent, for example, is $6.0 \%$ for this group compared with "Spécialités Bolduc's" $6.1 \%$.

As personnel expenses remain higher than average when the new sample is examined, it appears likely that lower profitability is due to these expenses.

Mr. Bolduc has zeroed in on a possible cause of the problem and can now look for feasible solutions.

## Footnotes

(1) These estimates are based on a sample of busingsses reporting sales between $\$ 25.000$ and $\$ 2.000,000$.

Total weighted expenditure on a given item
(2) Value in each cell $=$ Total weighted sales of all businesses in the sample $\times 100$ for each quartile,
(3) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this i.tem of expenditure }} \times 100 \quad$ for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal $100 \%$.

Notes
Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile (i.e. bottom 25\%, lower middie 25\%, etc.l represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. For comparison purposes. the high and low values of sales are shown.

How to use the tables
(II Locate the appropriate sales range that is displayed on the two lines entitled "Low sales value" and wigh sales value".
(2) The selected range will indicate the proper quartile, i.e. the bottom $25 \%$, the lower middle $25 \%$. the upper midde $25 \%$ or the top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartile.

Standard Industrial Classification Definition (SIC 1980):
SIC 7741 - Advertising Agencies
Businesses primarily engaged in creating andor placing advertising with the publications, radio and television media. Ihis industry includes advertising placement services, advertising services, advertising and publicity agency consulting services and sales promotion campaign services.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the

Survey of Employment. Payroll and Hours. Statistics Canada. Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll aeductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following. year.
"Newly reporting" and "no longer reporting" bu'sinesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table : for symbols and notes.

## Footnotes

(1) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of all businesses in the sample }} \times 100$ for each quartile.
(3) Value in each cell = Total weighted expenditure on a given itam

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal $100 \%$.

Notes
Data ara shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile (i.e. bot tom 25\%, lower middle 25\%. etc.) represents one quarter of the total number of businesses. Hithin each quartile, the average ratio is presented. For comparison purposes. the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range that is displayed on the two lines entitled "Low sales value" and "High sales value".
(2) The selected range will indicata the proper quartile, i.e. the botom $25 \%$, the lower middle $25 \%$, the upper middie $25 \%$ or the top 25\%.
(3) Data pertaining to the selected sales size ranga will be in that quartile.

## Standard Industrial Classification Definltion (SIC 1980);

SIC 6223 - Appliance, Television, Radio and Stereo Repair Shops
Businesses primarily engaged in the repair and maintenance of radios, television sets, stereo equipment, tape recorders and household electrical appliances. Such shops may oe secondarily angaged in selling such equipment and parts. Businesses primarily engaged in retail dealing in such equipment and appliances are classified in one of the preceding classes of this industry group. Businesses engaged in the repair of household appliances, repair of radios, repair of stereo equipment and the repair of television sets are included in this industey.

(1) The ratios represent the average of ratios for each business in the group and cannot be calculated from the figures shown in fable 2 .
(2) These estimates are based on a sample of businesses reporting sales betwean $\$ 25,000$ and $\$ 2,000,000$.

See Table 1 for symbols and notes.

Definitions:

1. Liquidity ratio:

Current $=$ current assets / current liabilities.
2. Leverage ratios:
a) Debt/equity $=$ cotal liabilities $/$ equity.
b) Debt ratio = total liabilities / total assets.
c) Interest coverage = net profit + interest expense / interest expense.

（1）These estimates are based on a sample of incorporated businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$ ．Semple count includes only those businesses reporting a statement of changes．
See Table 1 for symbols and notes．

TABLE 5．Employment changes by size of business，1984－1987 based on SIC classification in 1987
Canada，Appliance，Television，Radio \＆Stereo Repair Shops（SIC 6223）
Business size expressed in
average labour units（i）
（1）Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the
Survey of Employment．Payroll and Hours，Statistics Canada．Catalogue 72－002．An average labour unit could be interpreted as a
full－time employee．Note that the business size groups used are determined at the Canada level．Thus if a business has at least
500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group．
（2）Refers to businesses reporting no payroll deductions in the previous year．
131 Refers to businesses reporting no payroll deductions in the following year．
＂Newly reporting＂and＂no lenger reporting＂businesses are assumed to have been in activity for six months and the information is adjusted accordingly．

See Table 1 for symbols and notes．

## Symbols

- zero or no observations
-- too small too be expressed
.. not applicabie
$\times \quad$ confidential

## Footnotes

(1) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Value in each cali $=$
total weighted expenditure on a given itam
Total waighted sales of all businesses in the sampie $\times 100$ for each quartile.
(3) Vaiue in each cell=

Total weighted expenditure on a given item

This portion of the table pertains only to the businesses reporting the specific expanse item. Therefore these ratios are calculated individualiy and the total will not necessariiy equal $100 \%$.

Notes
Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quertile (i.e. bottom 25\%: lower middie 25\%, etc.l represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. for comparison purposes. the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range that is dispiayed on the two lines entitled "how sales value" and "High sales vaiue".
(2) The selected range will indicete the proper quartile, i.e. the bottom $25 \%$, the lower middie $25 \%$, the upper middle $25 \%$ or the top 25\%.
(3) Data pertaining to the seiected saies size renge will be in that quartile

## Standard Industrial Classification Definition (SIC 1980):

SIC 6220 - Appliance, Television, Radio and Stereo Stores
Businesses primariiy engaged in retail dealing in major household appliances, smali electrical appliances, television, radio and sound equipment. Repair shops for such appliances are included in this industry group.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours, Statistics Canada. Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
13) Refers to businesses reporting no payroll deductions in the following year
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes.

## Footnotes

(1) These estimates are based on a sample of businessas reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of all businesses in the sample }} \times 100$ for each quartile.
(3) Value in each cell $=\frac{\text { Iotal weighted expenditure on a given item }}{\text { lotal weighted sales of businesses reporting this item of expenditure }} \times 100$ for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Tharefore these ratios are calculated individually and the total will not necessarily equal $100 \%$.

Notes
Data are shown by quartiles wher at least 13 of the sampled businesses raport the specific item.
Records ware ranked in ascending order according to sales size. Each quartile li.e. bottom 25\%. lower middle $25 \%$, etc.) represents one quarter of the total number of businesses. Within eech quartile, the average ratio is presented. for comparison purposes, the high and low values of sales are shown.

## How to use the tables

(11 Locate the appropriate sales range that is displayed on the two lines entitled "Low sales value" and "High sales value".
(2) the selected range will indicate the proper quartila, i.e. the bottom $25 \%$, the lower middle $25 \%$, the upper middle $25 \%$ or the top $25 \%$.
(3) Data pertaining to the selected sales size range will be in that quartile.

## Standard industrial Classification Definition (SIC 1980):

SIC 6221 - Appliance, Television, Radio and Stereo Stores
Businesses primarily engaged in retail dealing in household appliances, radios, television sets and sound equipment. These businesses include retail portable household air conditioners, appliance, radio. television and stereo stores, retail household appliances, retail household laundry driers. retail household food preparation appliances. retail household floor and rug care appliances. retail household freezers. retail household hair driers, retail household kitchen appliances, retail microwave and convention ovens, retail household ranges is toves), retail household refrigerators, retail household sewing machines, retail household stoves, retail household vaccuum cleaners and retail household washing machines.

$\times$ confidential
Footnotes
(1) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Value in each ceil $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of ail businesses in the sample }} \times 100$ for each quartile.
(3) Value in esch ceil $=$ Total weighted expenditure on a given item Total weighted sales of businesses reporting this item of expenditure $x$ for each quartile

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculat individually and the total will not necessarily equal $100 \%$.

## Nates

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item
Records were ranked in ascending order according to sales size, Each quartile (i.e. bottom 25\%, lower middie 25\%, etc.l represents one quarter of tha total number of businesses. Within aach quartile, the average ratio is presented. For comparison purposes, the high and low values of sales are shown.

How to use the tables
III Locaterthe appropriate sales range that is displayed on the two lines entited "Low sales value" and "High sales value"
(2) The selected range will indicate the proper quartile, i.e. the bottom $25 \%$, the lower midde $25 \%$, the upper middle $25 \%$ or the top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartila.

Standard Industrial. Classification Definition (SIC 1980):
SIC 9921 - Automobile and Truck Rental and Leasing Services
Businesses primarily engaged in renting and leasing passenger cars or trucks without drivers. Automobile rental or leasing (without driverl. car rental agencies and truck rentals (without driverl are included in this industry.

SDURCE: Small Business and Special Surveys Division, Statistics Canada

(1) These estimates are based on a semple of incorporated businesses reporting sales between $\$ 25.000$ and $\$ 2,000$, 000. Sample count includes only those businesses reporting a statement of changes. See Table 1 for symbols and notes.

TABLE 5. Employment changes by size of business, 1984-1987 based on SIC elassification in 1987 Canada, Automobile and Truck Rental and Leasing Services (SIC 9921)

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rete as reported in the Survey of Employment. Payroll and Hours, Statistics Canada, Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table | for symbols and notes.

## Footnotes

(1) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Value in each cell $=\frac{\text { Total weighted expenciture on a given item }}{\text { Total weighted sales of all businesses in the sample }} \times 100$ for each quartile.
(3) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted seles of businesses reporting this item of expenditure }} \times 100$ for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal $100 \%$.

## Notes

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile (i,e. bottom 25\%, lower midde 25\%, etc.l represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. For comparison purposes. the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range that is displayed on the two lines entitied "Low sales value" and "High sales value".
(2) The selocted range will indicate the proper quartile, i.e. the bottom $25 \%$, the lower middle $25 \%$. the upper midde $25 \%$ or the top $25 \%$.
(3) Data pertaining to the selected sales size range will be in that quartile

Standard Industrial Classification Definition (SIC 1980):
SIC 6312 - Automobile (Used) Dealers
Businesses primarily engaged in retail dealing in used cars. Such businesses may be secondarily engaged in selling n:w cars and equipment.

(1) These estimates are based on a sample of incorporated businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$. Sample count includes only those businesses reporting a statement of changes.
See Table 1 for symbols and notes.

TABLE 5. Employment changes by size of business, 1984-1987 based on SIC classification in 1987
Canada, Automobile Dealers . . (SIC

(1) Average labour units are calculated by dividing total payroll by the average annua! wage and salary rate as reported in the Survey of Employment. Payroll and Hours. Statistics Canada, Catalogue $72-002$. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group
(2) Refars to businesses reporting no payroll deductions in the previous year.
(3) Refars to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes.

## Symbals

- zero or no observations
-- too small too be expressed
... not applicable
$x$ confidential

## Footnotes

(1) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total waighted sales of all businesses in the sample }} \times$ for each quartile.
(3) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Fotal weighted sales of businesses reporting this item of expenditure }} \times 100 \quad$ for each quartile.

This portion of the tabie pertains only to the businesses reporting the specific expense item. Therefore these ratios are calalat individually and the total will not necessarily equal $100 \%$.

## Notes

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile li.e. bottom 25\%. lower middle 25\%, etc.l represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. For comparison purposes, the high and low values of seles are shown.

How to use the tables
(1) Locate the appropriate sales range that is displayed on the two lines entitled wow sales value" and "High sales value"
(2) The selected range will indicate the proper quartile, i.e. the bottom $25 \%$, the lower middle $25 \%$, the upper middle $25 \%$ or the top $25 \%$.
(3) Data pertaining to the selected sales size range will be in that quartile

Standard Industrial Ciassification Definition (SIC 1980):
SIC 9711 - Barber Shops
8usinesses primarlly engaged in providing men's barbering and hair styling services such as barber shops and men's hair stylist shops.

## Footnotes

(1) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000.000$.
2) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of all businesses in the sample }} \times 100$ for each quartile.
3) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100$ for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calalated individually and the total will not necessarily equal $100 \%$.

## Notes

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile li.e. bottom 25\%, lower midde 25\%. etc.l represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. For comparison purposes. the high and low values of sales are shown.

How to use the tables
(11 Locate the appropriate sales range that is displayed on the two lines entitled "Low sales value" and "High sales value".
(2) The selected range will indicate the proper quartile, i.e. the bottom $25 \%$, the lower middle $25 \%$, the upper middle $25 \%$ or the top $25 \%$.
(3) Data pertaining to the selected sales size range will be in that quartile.

Standard Industrial Classification Definition (SIC 1980):
SIC 9712 - Beauty Shops
Businesses primarily engaged in providing women's heirdressing and beauty services such as beauty parlours, beauty salons, beauty shops. women's only manicuring and women's hair stylist shops.

| ```Loverage ratios Debt/equity ratio (times) Interest coverage ratio (times) Debt ratio (times)``` | 4.5 2.8 0.8 | 21.6 2.1 1.0 | 138.6 1.4 1.0 | 7.2 2.6 0.9 | 2.8 3.2 0.7 |

(1) The ratios represent the average of ratios for each business in the group and cannot be calculated from the figures shown in rable 2 .
(2) These estimates are based on a sample of businesses peporting sales between $\$ 25,000$ and $\$ 2,000,000$.

See Tablo 1 for symbols and notes.

Definitions:

1. Liquidity ratio:

Current = current assets / current liabilities.
2. Leverage ratios:
a) Debt/equity = total liabilities / equity.
b) Debi ratio = iotal liabilities / total assets.
c) Interest coverage $=$ net profit + interest expense $/$ interest expense.

TABLE 4. Statement of changes in financial position for incorporated businesses only, 1987
Canada, Beauty Shops (SIC 9712)

(1) These estimates are based on a sampla of incorporatad businesses reporting sales between $\$ 25,000$ and $\$ 2.000,000$. Sample count includes only thosa businesses reporting a statement of changes
ee Table 1 for symbols and notes.

| $\begin{aligned} & \text { less than } 20 \\ & 20-99 \\ & 100-499 \\ & 500 \text { and over } \end{aligned}$ | $\begin{array}{r} 12,999 \\ 222 \\ 14 \\ 2 \end{array}$ | $\begin{array}{r} 361,739 \\ 70.077 \\ x \\ x \end{array}$ | $\begin{array}{r} 33.295 \\ 6,468 \\ 1.214 \\ 692 \end{array}$ | $\begin{array}{r} 2.078 \\ 21 \\ 2 \end{array}$ | $\begin{array}{r} 1.509 \\ 17 \\ 6 \\ 7 \end{array}$ |
| 1987 |  |  |  |  |  |
| Total | 14,866 | 592,370 | 48,910 | 2,419 | ... |
| $\begin{aligned} & \text { less than } 20 \\ & 20-99 \\ & 100-499 \\ & 500 \text { and over } \end{aligned}$ | $\begin{array}{r} 14,591 \\ 238 \\ 25 \\ 12 \end{array}$ | $\begin{array}{r} 455,642 \\ 84.268 \\ 23 ; 047 \\ 29,413 \end{array}$ | 37,640 6,933 1,965 2,372 | $\begin{array}{r} 2,397 \\ 21 \\ -\quad 1 \end{array}$ | $\cdots$ $\cdots$ $\cdots$ |

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment. Payroll and Hours, Statistics Canada. Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group,
(2) Refers to businesses reporting no payroll deductions in the previous year.
13) Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes.

## Symbols

- zero or no observations
-- too small too be expressed
... not applicable
$x$ confidential
Foot notes
(1) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of all businesses in the sample }} \times 100$ for each quartile.
(3) Value in eech cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100$ for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal $100 \%$.

## Notes

Data are shown by quartiles when at least 13 of the sampled businesses report the specific itam
Records were ranked in ascending order according to sales size. Each quartile li.e. bottom 25\%. lowar middle 25\%, etc.l represents one quarter of the total number of businesses. Within each quartile, the average retio is presented. for comparison purposes, the high and low values of sales are shown.

How to use the tables
(1) Locete the appropriate sales range that is displayed on the two lines entitled "low sales value" and "High sales value".
(2) The selected range will indicate the propar quertile, i, e. the botom $25 \%$, the lower middele $25 \%$, the upper middle $25 \%$ or the top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartile.

## Standard Industrial Classification Definition (SIC 1980):

SIC 9214 - Caterers
Businesses primarily engaged in catering whether by mobile canteens or in private halls, camps, etc. Businesses engaged in cafeterias, social and industrial home food catering services, mobile canteens and social catering services lweddings. parties, etc.l are included in this industry.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours, Statistics Canada, Catalogue 72-002. An. average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes.

## CLOTHING STORES N.E.C

SMALL BUSNESS OFFICE

TABLE 1. Selected operating ratios, in percent of sales, 1987
Canada, Clothing Stores n.e.c. (S1C 6141)

Symbols
zero or no observations
-- too small too be expressed
... not appliceble
$\times$ confidential
Footnotes
(1) These estimates are besed on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of all businesses in the sample }} \times 100$ for each quartile.
(3) Value in each ceil $=\frac{\text { Total weighted expenditure on a given item. }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times$ loo for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal 100\%.

Notes
Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile li.e. bottom $25 \%$, lower middle $25 \%$, etc. 1 represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. For comparison purposes, the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range that is displayed on the two lines entitled "low sales value" and "High sales value".
(2) The selected range will indicate the proper quartile. i.e. the bottom $25 \%$, the lower middle $25 \%$, the upper middie $25 \%$ or the top $25 \%$.
(3) Data pertaining to the selected sales size range will be in that quartile.

## Standard Industrial Classification Definition ISIC 1980):

SIC 6141-Clothing Stores n.e.c.
Businesses primarily engaged in retail dealing in clothing not elsewhere ciassified or in a combination of men's, women's and children's clothing and accessories. Included in this industry are businesses primarily engaged in retailing fur goods. Retail children's and infants' clothing, children's clothing stores, retail children's coats, combination men's. women's and children'sl clothing stores. retail children's dresses, blouses and shirts, family clothing stores, retail fur goods. retail children's hosiery. retait infants and toddlers clothing. retail children's pants and slacks, retail children's skirts. retail children's sleepwear. retail children's suits. retail children's sweaters and retail children's underwear are also included in this industry.

(i) The ratios represent the average of ratios for each business in the group and cannot be calculated from the figures shown in rable 2 .
(2) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.

See Table 1 for symbols and notes.

## Definitions:

1. Liquidity ratio:

Current $=$ current assets / current liabilities.
2. Leverage ratios:
a) Dobt/equity $=$ total $\mid i a b i l i t i e s / e q u i t y . ~$
b) Debt ratio = total |iabilities $/$ total assets
c) interest coverage $=$ net profit + interest expense / interest expense.

\section*{Symbois}
- zero or no observations
-- too small too be expressed
... not applicable
\(\times\) confidential

\section*{Footnotes}
(1) These estimates are based on a sample of businesses reporting sales between \(\$ 25,000\) and \(\$ 2,000 ; 000\).
(2) Value Total weighted expenditure on a given item
(2) Value in each cell \(=\frac{\text { Total weighted sales of all businesses in the sample }}{\text { lop }} \mathbf{1 0 0}\) for eartile.
(3) Value in each cell= Total waighted expenditure on a given item Total weighted sales of businesses reporting this item of expenditure \(\times 100\) for each quertile.

This portion of the table perteins only to the businesses reporting the specific expense item, Therefore these ratios are calculat individually and the total will not necessarily equal 100\%.

\section*{Notes}

Deta are shown by quartiles when at leest 13 of the sampled businesses report the specific item,
Records were ranked in ascending order according to sales size. Each quartile li.e. bottom 25\%, lower middle 25\%, etc.l represents one quarter of the total number of businesses. Hithin each quartile, the avarage ratio is presented, For comperison purposes, the high and low valuas of sales are shown.

How to use the tables
(1) Locate the appropriate sales range that is displayed on the two lines entitled "Low sales value" and "High sales valuen.
(2) The selected range will indicate the proper quartile. i.e. the bot tom 25\%, the lower middle \(25 \%\), the upper midde \(25 \%\) or the top 25\%.
(3) Data pertaining to the selectad sales size range will be in that quartile

\section*{Standard Industrial Classification Definition (SIC 1980):}

SIC 9713 - Combination Barber and Beauty Shops
Businesses primarily engaged in providing men's barbering or hair styling and women's hairdrassing and/or beauty services on the same premises such as barber and beauty shop combinations and unisex hair stylist shops.

11 These estimates are based on a sample of incorporated businesses reporting sales between \(\$ 25,000\) and \(\$ 2,000,000\). Sample count includes only those businesses reporting a statement of changes.
See Table 1 for symbols and notes.

TABLE 5. Employment changes by size of business, 1984-1987 based on SIC classification in i987
Canada, Barber and Beauty Shops (SiC 971)
\begin{tabular}{llll}
\hline
\end{tabular}
(1) Average labour units are calculated by dividing totel payroll by the average annual wage and salary rate as reported in the

Surver of Employment, Payroll and Hours, Statistics Canada, Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and ovar group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.
See Table 1 for symbols and notes.

SOURCE: Small Business and Special Surveys Division, Statistics Canada.

Symbols
- zero or no observations
-- too small too be expressed
... not applicable
\(\times\) confidential
Footnotes
11) These estimates are based on a sample of businesses reporting sales between \(\$ 25,000\) and \(\$ 2,000,000\).
(2) Value in each cell = Total weighted expanditure on a given item \(\times 100\) for each quartile.

131 Value in each cel. \(=\) Total weighted expenditure on a given item Total weighted sales of businesses reporting this item of expenditure \(\times 100\) for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individuelly and the total will not necessarily equal \(100 \%\).

Notes
Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile li.e. bot tom 25\%. lower midde 25\%, etc.) represents one quarter of the total number of businesses. Hithin each quartile, the average ratio is presanted. For comparison purposes, the high and low values of sales are shown.

How to use the tables
(1) locate the appropriate sales range that is displayed on the two lines entitled "low sales value" and "High sales value".
(2) The selected range will indicate the proper quartile, i.e. the bot tom \(25 \%\), the lower middle \(25 \%\), the upper middle \(25 \%\) or the top 25\%.
13) Data pertaining to the selected sales size range will be in thet quartile.

Standard Industrial Classification Definition (SIC 1980):
SIC 2810 - Commercial Printing Industries
Businesses primarily engaged in the production of commercial and/or job printing regardless of the printing method or process used lletterpress. including flexographic. photographic or lithographic: intaglio or gravure: stencil printing or silk-screen. etc.

(1) Average labour units are calculated by dividing total payroll by the avarage annual wage and salary rate as reported in the Survey of Employment. Payroll and Hours. Statistics Canada. Catalogue 72-002. An average labour unit could be interpreted as a fuli-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
13) Refers to businesses reporting no payroll deductions in the following year.
"Newiy reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes.

\section*{Symbols}

\section*{zero or no observations \\ too small too be expressed \\ .. not applicabla}
\(\times\) confidential

\section*{footnotes}
(1) These estimates are based on e sample of businesses reporting sales between \(\$ 25,000\) and \(\$ 2.000,000\).
\(\begin{aligned} & \text { (2) Velue in each cell }= \frac{\text { Total weighted expenditure on a given item }}{\text { Totai weighted sales of all businesses in the sample }} \times 100 \text { for each quartile. } \\ & \text { (3) Value in each celi }=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100 \\ & \text { for each quartile. }\end{aligned}\)
This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculat individuaily and the total will not necessarily equai \(100 \%\).

\section*{Notes}

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile (i:e. bottom \(25 \%\), lower middle \(25 \%\), etc.) represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. for comparison purposes, the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range that is displayed on the two lines entitled "Low sales value" and "High sales value".
(2) The seiected range will indicate the proper quartile. i.e. the bot tom \(\mathbf{2 5 \%}\), the lower middle \(25 \%\), the upper midde \(25 \%\) or the top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartile.

\section*{Standard Industrial Classifigation Definition (SIC 1980):}

\section*{SIC 7721 - Computer Services}

Businesses primarily engaged in providing computer faciiities on a rental, leasing or time sharing basis and such activities as progromming, planning and systems work. This industry includes computer consulting services, computer input preparation services, computer processing services, computer programming services, computer rental or leasing services lexcept finance leasingl, computer services, computer softwaro services, computer time-sharing services, computer services software packages, computer services systems analysis and design and computer services systems design.

\section*{Symbols}
- zero or no observations
-- too small too be expressed
... not applicable
\(\times\) confidential
Footnotes
(1) These estimates are based on a sample of businesses reporting sales between \(\$ 25,000\) and \(\$ 2,000,000\).
(2) Value in each cell \(=\frac{\text { Total weighted expenditure on a given item }}{\text { rotal weighted sales of all businesses in the sample }} \times 100\) for eech quartile.
(3) \(V\)

Total weighted expenditure on a given item
Total weighted sales of businesses reporting this item of expenditure
This portion of the table pertains only to the businesses reporting the specific expense item; Therefore these ratios are calculated individually and the total will not necessarily equal looz.

Notes
Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile (i.e. bot tom 25\%, lower midde 25\%, ete.) represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. For comparison purposes, the high and low values of sales are shown.

How to use the tables
(t) Locate the appropriate sales range thet is displayed on the two lines entitled "Low sales valua" and "High sales value".
(2) The selected range will indicate the proper quartile, i.e. the bottom \(25 \%\), the lower middle \(25 \%\), the upper middle \(25 \%\) or the top \(25 \%\).
(3) Data pertaining to the selected sales size range will be in that quartile.

\section*{Standard Industrial Classifieation Definition (SIC 1980):}

SIC 4224 - Concrete Pouring and Finishing Contractors
Businesses primarily engaged in concrete pouring or placement and concrete finishing. Concrete dampproofing, concrete finishing. concrete pouring, concrete pumping lplacementl. gunning concrete, paving with concrete, pressure grouting. sealing or coating concrete, waterproofing concrete and weatherproofing concrete are also included in this industry.

(11) Average labour units are calculated by dividing total payroll by the avarage annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours. Statistics Canada. Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
\((2)\) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes.

\section*{Symbols}
- zero or no observations
.- too small too be expressed
\(\ldots\)... not applicabio
\(\times\) confidential
Footnotes
(1) These estimates are besed on a sample of businesses reporting sales between \(\$ 25,000\) and \(\$ 2,000,000\).
(2) Value in each cell \(=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of all businesses in the sample }} \times 100\) for each quartile
(3) Value in each cell \(=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100\) for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the cotal will not necessarily equal 100\%.

\section*{Notes}

Deta are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile (i.e. bot tom 25\%, lower middle 25\%, etc.l represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. For comparison purposes, the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range that is displayed on the two lines entitled "low sales value" and "High sales value".
(2) The selected range will, indicate the proper quartile, i.e. the bot tom \(25 \%\), the lower middle \(25 \%\). the upper middle \(25 \%\) or the top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartile.

\section*{Standard Industrlal Classification Definition (SIC 1980):}

SIC 4842 - Courier Service Industry
Businesses primarily engaged in providing a delivery service for letters and mail-type small parcels. Businesses engaged in courier messenger services. courier parcel delivery services, courier parcel express services and courier pick-up and delivery services are included in the industry.

\hline
\end{tabular}
(11 the ratios represent the average of ratios for each business in the group and cannot be calculated from the figures shown in table 2 .
(2) These estimates are based on a sample of businesses reporting sales between \(\$ 25,000\) and \(\$ 2,000,000\).

See Table 1 for symbols and notes.

Definitlons:
1. Liquidity ratio:

Current = current assets / current liabilities.
2. Leverage ratios:
al Debr/equity \(=\) total \(\mid\) iabilities \(/\) equity.
b) Debt ratio = total liabilities / total assets.
c) Interest coverage = net profit + interest expense / interest expense.

(1) Average labour units are calculated by dividing'total payroll by the average annual wage and salary rate as reported in the

Survey of Employment. Payroll and Hours. Statistics Canada, Catalogue 72-002. An average labour unit could be interpreted as a
full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least
500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businessès reporting no payroll deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See rable 1 for symbols and notes.

Footnotes
(1) These estimates are based on a sample of businesses reporing sales between \(\$ 25,000\) and \(\$ 2,000,000\).
(2) value in each Total weighted expenditure on a given item
(2) Value in each cell \(=\frac{\text { Total weighted sales of all businesses in the sample }}{} \times 100\) for each quartile.
(3) Value in each celi \(=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100\)
for eech quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal \(100 \%\).

Notes
Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Eech quartile li.e. bottom \(25 \%\). lower middle \(25 \%\). etc.l represents one quarter of the total number of businesses. Within eech quartile, the average ratio is presented. For comparison purposes. the high and low values of sales are shown.

How to use the tables
III Locate the appropriate sales range that is displayed on the two lines entitled *Low sales value" and "High sales value".
(2) The selected range will indicate the proper quartile, i.e. the bot on \(25 \%\), the lower middle \(25 \%\), the upper middle \(25 \%\) or the top 25\%.
(3) Data pertaining to the selected seles size range will be in that quartile.

Standard Industriai Classifieation Definition (SIC 1980):
SIC 6921-Direct Sellers
Businesses primarily engaged in retail dealing in a variety of products such as dairy products. beverages, cosmetics and kitchenware by means of telephone. door-to-door canvassing or parties arranged in customers homes. Mail-order houses are included here. Direct mail merkoting operators. direct personal retailing operators, direct selling of merchandise, door-to-door retailing of merchandise. retail food and beverage home delivery, mail order houses, home delivery newspapers. direct sales non-store retailing party plan merchandising and retail telephone selling of merchandise are included here.

TABLE 4. Statement of changes in financial position for incorporated businesses only, 1987
Canada, Direct Sellers (Sic 6921)

(11) These estimates are based on a sample of incorporated businasses reporting sales between \(\$ 25,000\) and \(\$ 2,000,000\). Sample count includes only those businesses reporting a statement of changes.
See Table 1 for symbols and notes.

TABLE 5. Employment changes by size of business, 1984-1987 based on SIC classification in 1987
Canada, direct Sellers (SIC 6921)
\begin{tabular}{llll}
\hline
\end{tabular}
(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment. Payroll and Hours. Statistics Canada. Catalogue 72-002. An average labour unit could be interpreted as a full-time amployee. Note that the business size groups used are determined at the Canada level. Ihus if. a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses repofting no payroll deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See lable 1 for symbols and notes.

... not applicable
\(\times\) confidential

\section*{Footnotes}
(i) These estimates are based on a sample of businesses reporting sales between \(\$ 25.000\) and \(\$ 2.000 .000\).
(2) Value in each cell \(=\frac{\text { Total waighted expenditure on a given item }}{\text { Total weighted sales of ali businesses in the sample }} \times 100\) for each quartile.
(3) Value in each cell \(=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100\) for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal 100\%.

Notes
Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile (i.e. bottom 25\%. lower middle 25\%, etc.) represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. For comparison purposes, the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range that is displayed on the two lines entitled mow sales value" and "high sales value".
(2) The selected range will indicate the proper quartile, i.e. the bottom 25\%. the lower middie \(25 \%\). the upper middle \(25 \%\) or the top \(25 \%\).
(3) Data pertaining to the selected sales size range will be in that quartile.

\section*{Standard Industrial Classification Definition (SIC 1980):}

SIC 4564 - Dry Bulk Materials Trucking Industry
Businesses primarily engaged in transporting, usually by dump-trucks, such dry bulk materials as cement. fill, sand and dabris including snow. included are businesses engaged in the dry materials bulk hopper truck service, dry bulk truck transporting sorvice, dry chemicals bulk tank truck service. dump truck transporting service ifill, sand. debrisl, snow hauling truck service and dry bulk tank truck transporting service.

(11) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the

Survey of Employment, Payroll and Hours, Statistics Canada. Catalogue 72-002. An average labour unit could be interpreted as a
full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that humber in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symools and notes.

TABLE 1. Selected operating ratios, in percent of sales, 1987
Canada, Orywall Work (SIC 4272)
\begin{tabular}{lllllllll}
\hline & \\
\hline
\end{tabular}

\section*{Symbols}
- zero or no observations
-- too smali too be expressed
... not applicable
\(\times\) confidential
Footnotes
(1) These estimetes are based on a sample of businesses reporting sales between \(\$ 25.000\) and \(\$ 2.000 .000\)
(2) Value Total weighted expenditure on a given item

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal \(100 \%\).

\section*{Notes}

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item
Records were ranked in ascending order according to sales size. Each quartile li.e. bottom 25\%, lower middle 25\%, etc.) represents one quarter of the totai number of businesses. Within eech quartile, the average ratio is presented. For comparison purposes. the high and low values of sales are shown.

How to use the tables
(i) Locate the appropriate sales renge that is displayed on the two lines entitied "Low sales value" and "High sales value".
(2) The selected range will indicate the proper quartile, i.e. the bottom \(25 \%\), the lower midole \(25 \%\). the upper midde \(25 \%\) or the top 25\%.
(3) Data pertaining to the selected sales size range will be in thet quartile.

Standard Industrial Classification Definition (SIC 1980):
SIC 4272 - Drywall Contractors
Businesses primarily engaged in the installation of drywall sheets or panels, including related taping of joints, sanding and other
arywall finishing. This industry includes businesses engaged in drywall finishing ltaping, sanding, stipolingl. drywali installation, installation of gypsum waliboard. sheetrock installation ldry wallboard), drywall stippling and taping drywall joints.

\section*{Symbols}
－zero or no obsarvations
．－too small too be expressed
．．．not applicable
\(\times\) confidential

\section*{Footnotes}
（1）These estimates are based on a sample of businesses reporting sales between \(\$ 25.000\) and \(\$ 2.000 .000\) ．
（2）Value in each ceil \(=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of all businesses in the sample }} \times 100\) for each quartile
（3）Value in each cell
Total weighted expanditure on a given item
Toial weighted sales of businesses reporting this item of expenditure \(x\) ，fortile
This portion of the table pertains only to the businesses reporting the specific expense item．Therefore these ratios are calculated individually and the total will not necessarily equal \(100 \%\) ．

\section*{Notes}

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item．
Records ware ranked in ascending order according to sales size．Each quartile \(\| i . \theta\) ．bottom 25\％．lower middle 25\％，etc．l．represents one quarter of the total number of businesses．Within each quartile．the average ratio is presented．for comperison purposes，the high and low values of sales are shown．

\section*{How to use the tables}
（1）Locate the appropriate sales range that is displayed on the two lines entited＂Low sales value＂and＂High sales value＂．
（2）The selected range will indicate the proper quartile，i．e．the botom \(25 \%\) ，the lower midde \(25 \%\) ，the upper middie \(25 \%\) or the top 25\％．
（3）Data pertaining to the selected sales size，range will be in that quartile．

\section*{Standard Industrial Classification Definition（SIC 1980）：}

SIC 4261－Eiectrical Contractors
Businesses primarily engaged in the installation and repair of electrical and communication wiring systems，except transmission and distribution lines．Included in this industry are audio－visual wiring systems installation，electric base board heaters installation． installation of electric heating blast coils，installation of electric burglar alarm systems，instaliation of electric power control pangls and outlets，electrical work．electric fire alarm systems instaltation，installation of intercommunication systems，electric lighting systems installation，public address systems installation，installation of electric snow melting cabies，telephone wiring installation and electrical wire installations to houses buildings and structures．

TABLE 3. Financial ratios(1) for incorporated bustnesses only, 1987
Canada, Electrical Work (SIC 4261)
\begin{tabular}{lcccccccccccc}
\hline
\end{tabular}
(1) The ratios represent the average of ratios for gach business in the group and cannot be calculated from the figures shown in rable 2 .
(2) These estimates are based on a sample of businesses reporting sales between \(\$ 25.000\) and \(\$ 2,000,000\).

See Table 1 for symbols and notes.

Definitions:
1. Liquidity ratio:

Current = current assets / current liabilitias.
2. Leverage ratios:

Debt/equity \(=\) total liabilities \(/\) equity.
a) Debt ratio \(=\) total liabilities \(/\) total assets.
a) Interest coverage = net profit + interest expense / interest expense.

TABLE 4. Statement of changes in financial position for incorporated businesses only, 1987
Canada, Electrical Work (SIL 4261)

(1) These estimates are based on a sample of incorporated businesses reporting sales between \(\$ 25,000\) and \(\$ 2,000.000\). Sample count includes only those businesses reporting a statement of changes.
See Table 1 for symbols and notes.

11) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours, Statistics Canada, Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year
(3) Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table \(\mid\) for symbols and notes.

\title{
ENTERTAINMENT PRODUCTION COMPANIES AND ARTISTS
}

\section*{CANADA}
\(\longrightarrow\)

SMALL BUSINESS OFFICE

TABLE 1. Selected operating ratios, in percent of sales, 1987
Canada, Entertainment Production Companies and Artists (SIC 9631)

Symbols
- zero or no observations
-- too small too be expressed
... not applicable
\(\times\) confidential

\section*{Footnotes}
(1) These estimates are based on a sample of businesses reporting sales between \(\$ 25,000\) and \(\$ 2,000,000\).
(2) Value in each cell \(=\) rotal weighted expenditure on a given item
(3) Value in each cell \(=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times\) loo forh quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal \(100 \%\).

Notes
Data are shown by quartiles when at leest 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile (i.e. bottom 25\%, lower midde 25\%. etc.) represents one quarter of the total number of businesses. Hithin each quartile, the averaga ratio is presented. For comparison purposes, the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range that is displayed on the two lines entitled "low sales value" and "High sales value".
(2) The selected range will indicate the proper quartile, i.e. the bottom \(25 \%\), the lower midde \(25 \%\), the upper midde \(25 \%\) or the top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartile.

\section*{Standard Industrial Classification Definition (SIC 1980):}

SIC 9631 - Entertainment Production Companies and Artists
Businesses primarily engaged in promoting, producing and performing in "live" theatrical productions and staged entertainment. promotion agencies primarily engaged in arranging the advertising, location. ticket sales. etc.. of such productions are included here. Own-account actors, ballet and other dance companies. band or orchestras. own-account entertainers, own-account musicians, opera companies, orchestras. own-account performers lentertainerl. pop groups, road companies. own-account singers. staged entertainment. stock ltheatricall companies. theatre companies, theatre production agencies, theatrical promotion agencies and own-account vocalists are included in this industry.

(1) the ratios represent the average of ratios for each business in the group and cannot be calculated from the figures shown in fable 2 .
(2) These astimates are besed on a sample of businesses reporting sales between \(\$ 25,000\) and \(\$ 2,000,000\).

See Table 1 for symbols and notes.

Definitions:
1. Liquidity ratio:

Current = current assets / current liabilities.
2. Leverage ratios
a) Debt/equity = total Iiabilities / equity.
b) Debt ratio = total liabilities / total assets.
c) Interest coverage = net profit + interest expense \(/\) interest expense

（1）Avarage labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment，Payroll and Hours，Statistics Canada，Catalogue 72－002．An average labour unit could be interpreted as a full－time employee．Note that the business size groups used are determined at the Canada level．Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group
（2）Refers to businesses reporting no payroll deductions in the previous year．
131 Refers to businesses reporting no payroll deductions in the following year
＂Newly reporting＂and＂no longer reporting＂businesses are assumed to have been in activity for six months and the information is adjusted accordingly．

See Table 1 for symbols and notes．

\section*{Footnotes}
(1) These estimates are besed on a sample of businesses reporting sales between \(\$ 25,000\) and \(\$ 2,000,000\). Total weighted expenditure on a given item
(2) Value in aach cell \(=\frac{\text { Total weighted sales of all businesses in.the sample }}{} \times 100\) for each quartile.
(3) Value in each cell Total weighted expenditure on a given item Total weighted sales of businesses reporting this item of expenditure \(\times 100\) for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal \(100 \%\).

\section*{Notes}

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile li.e. bot tom 25\%. lower midde \(25 \%\), etc.l represents one quarter of the total number of businesses. Within each quartile. the average ratio is presented. For comparison purposes. the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range that is displayed on the two lines entitled "Low sales value" and "High sales value".
(2) The selected range will indicate the proper quartile, i.e. the bottom \(25 \%\). the lower middle \(25 \%\), the upper midde \(25 \%\) or the top \(25 \%\).
(3) Data pertaining to the selected sales size range will be in thet quartile.

Stondard Industrial Classification Definition (SIC 1980):
SiC 4214 - Excavating and Grading Contractors
Businesses primarily engaged in construction site excavating and grading. Included are businesses engaged in construction site blasting, construction site drainage, construction site excavating, construction site grading, construction site land breaking and clearing, construction site rock removal and construction site trenching.

SOURCE: Small Business and Special Surveys Division, Statistics Canada.

(1) The ratios represent the average of ratios for each business in the group and cannot be calculated from the figures shown in table 2 .
(2) Thaso estimetes are based on a sample of businesses reporting sales betwaen \(\$ 25,000\) and \(\$ 2,000,000\).

See Table 1 for symbols and notes.

Definiti is:
1. Liquidity ratio:

Current \(=\) current assets / current liabilities.
2. Leverage ratios;
a) Debt/equity = total liabilities / equity.
bl Debt ratio \(=\) total liabilities / total assets.
cl Interest coverage = net profit * interest expense / interest expense.

TABLE 4. Statement of changes in financial position for incorporated businesses only, 1987
Canada, Excavating and Grading (SIL 4214)

(11) These estimates are based on a sample of incorporated businessas reporting sales between \(\$ 25,000\) and \(\$ 2,000,000\). Sample count includes only those businesses reporting a statement of changes.
See Table 1 for symbols and notes.

TABLE 5. Employment changes by size of business. 4984-1987 based on SIC classification in 1987
Canada, Excavating and Grading (SIC 4214)
\begin{tabular}{llll}
\hline
\end{tabular}
(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment. Payroll and hours, Statistics Canada. Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer reperting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes.

\section*{Footnotes}
(1) These estimates are based on a sample of businesses reporting sales between \(\$ 25,000\) and \(\$ 2,000,000\)
(2) Value in each cell \(=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of all businesses in the sample }} \times 100\) for each quartile.
(3) Value in each cell \(=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100\) for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individualiy and the total will not necessarily equal 100\%.

\section*{Notes}

Data are shown by quartiles when at least 13 of the sampled businesses report the spacific item.
Racords were ranked in ascending order according to sales size. Each quartila (i.e. bottom 25\%, lower middle 25\%, etc.) represents one quarter of the total number of businesses. Within each quartile, the average ratio is presentad. for comparison purposes, the high and low velues of sales are shown.

How to use the tables
(11) Locate the appropriate sales range that is displayad on the two lines entitled "Low sales value" and "High sales valueat.
(2) The selactad ranga will, indicate the proper quartile, l.e. the bottom \(25 \%\), the lower middle \(25 \%\), the uppar middle \(25 \%\) or the top 25\%.
(3) Data partaining to the selected sales size range will be in that quartile.

Standard Industrial Classification Definition (SIC 1980):
SIC 6151 - Fabric and Yarn Stores
Businesses primarily engaged in retail dealing in yard goods; yarns and related merchandise such as; dry goods and notions stores. fabric stores, retail knitting yarn and accessories, mill-end stores ltextile fabric). retail piece goods fextile fabricl. retail sewing thread. retail textile fabrics. retail yarn goods (textile fabric) and retail yarn.

\section*{Symbols}
- zero or no observations
-- too small too be expressed
... not applicable
confidential
Footnotes
(1) These estimates are based on a sample of businesses reporting sales between \(\$ 25,000\) and \(\$ 2,000,000\). Total weighted expenditure on a given item
2) Value in each cell =
?
(3) Value in each cell \(=\) Total weighted expenditure on a given item
Total waighted sales of businesses reporting this item of expenditure \(\times 100\)

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal \(100 \%\).

\section*{Notes}

Nata are shown by quartiles when at leest 13 of the sampled businesses report the specific item.
Records ware ranked in ascending order according to sales size. Eech quartile (i.e. botom 25\%, lower midde 25\%, eto.) represents one quarter of the total number of businesses. Hithin each quartile, the average ratio is presented. For comparison purposes, the high and low values of sales are shown.

How to use the tables
(1) Locate tha appropriate sales range that is displayed on the two lines entitled "Low sales value" and "High sales value".
(2) The selected range will indicate the proper quartile, i,e. the bottom \(25 \%\), the lower middle \(25 \%\), the upper middle \(25 \%\) or the top \(25 \%\).
(3) Data pertaining to the selected sales size range will be in that quartile.

\section*{Standard Industrial Classification Definition (SIC 1980):}

SIC 4274 - Finish Carpentry Contractors
Businesses primarily engaged in on-site cabinerry, millwork installation, prefabricated sash and door instaliation, garage door
installation. exterior and interior trimming and miscellaneous hardware installation. Included are businesses engaged in the installation and finishing of cabinetry, construction of built-in cabinets, the installation of interior and exterior wood trim.

TABLE 3. Financial ratios(1) for incorporated businesses only, 1987
Canada, Finish Carpentry (Sic 4274)

(1) The ratios represent the average of ratios for each business in the group and cannot be calculated from the figures shown in table 2 .
(2) These estimates are based on a sample of businesses reporting sales between \(\$ 25,000\) and \(\$ 2,000,000\).

See Table 1 for symbols and notes.

Definitions:
1. Liquidity ratio:

Curfent = current assets / current liabilities.
2. Leverage ratios:
a) Debt/equity \(=\) total \(\mid\) iabilities \(/\) equity.
b) Debt ratio \(=\) total liabilities / total assets.
cl Interest coverage = net profit + interest expense / interest expense.

111 These estimates are based on a sample of incorporated businesses reporting sales between \(\$ 25,000\) and \(\$ 2,000,000\). Sample count includes only those businesses reporting a statement of changes.
See Table 1 for symbols and notes.
TABLE 5. Employment changes by size of business, 1984-1987 based on SIC classification in i987
Canada, finish Carpentry (SIC 4274)
\begin{tabular}{lll}
\hline
\end{tabular}
(I) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours. Statistics Canada. Catalogue 72-002. An average labour unit could be interpreted as a
full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least
500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.
See Table 1 for symbols and notes.

\section*{Footnotes}
(1) These estimates are based on a sample of businesses reporting sales between \(\$ 25,000\) and \(\$ 2,000,000\).
(2) Value in each cell= Total weighted expenditure on a given item Total waighted sales of all businesses in the sample \(\times 100\) for each quartile. Total weighted expenditure on a given item
(3) Value in each cell = Total weighted sales of businesses reporting this item of expenditure \(\times 100\) for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calalated individually and the total will not negessarily equal \(100 \%\).

\section*{Notes}

Data'are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartila (i.e. bottom 25\%. lower middle 25\%, etc.l represents one quarter of the total number of businesses. Hithin each quartile. the average ratio is presented. For comparison purcoses, the high and low values of sales are shown.

How to use the tables
11) Locate the appropriate sales range that is displayed on the two lines entitled "low sales value" and "High sales value".
12) The selected range will indicate the proper quartile, i.e. the botom 25\%, the lower midde \(25 \%\), the upper midde \(25 \%\) or the top \(25 \%\).
(3) Data pertaining to the selected sales size range will be in that quartile.

\section*{Standard Industrial Classification Definition (SIC 1980)}

SIC 6521 - Florist Shops
Businesses primarily engaged in retail dealing in cut flowers, potted plants and the like. These businesses may be secondarily engaged in selling seeds, bulbs. nursery stock and garden supplies. Businesses engaged in retail cut flowers. florist shops, retail potted plants and retail fresh flowers and wreaths are also included in this industry.

(1) The ratios represent the average of ratios for each business in the group and cannot be calculated from the figures shown in rable 2 .
(2) These estimates are based on a sample of businesses reporting sales between \(\$ 25,000\) and \(\$ 2,000,000\).

See Table 1 for symbols and notes.

Definitions:
1. Liquidity ratio:

Current \(=\) current assets / current liabilities
2. Leverage ratios:
a) Debt/equity = total liabilities / equity.
b) Debt ratio = total liabilities / total assets.
c) Interest coverage = net profit + interest expense / interest expense.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours, Statistics Canada. Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level, thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes.

SOURCE: Sma!l Business and Special Surveys Division, Statistics Canada.

... not applicable
\(x\) confidential

\section*{Footnotes}
(1) These estimates are basad on a sample of businesses reporting sales batween \(\$ 25,000\) and \(\$ 2,000,000\).

Total weighted expenditure on a given item
(2) Value in each cell \(=\frac{\text { Total weighted sales of ail businesses in the sampia }}{x} 100\) for each quartile.
(3) Value in each ceil = Total weighted expenditure on a given item

This portion of the table pertains only to the businesses raporting the specific expense item. Therefore these ratios are calculated individualiy and the total will not necessarily equal \(100 \%\).

Notes
Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile li, e. bottom 25\%, lower middle 25\%, etc.) represents one quarter of the total number of businesses. Within each quartile, tha average ratio is presented. For comparison purposes, the high and low valuas of sales are shown.

How to use the tables
(1) Locate the appropriate sales range that is displayed on the two iines entitled "Low sales value" and uhigh sales value".
(2) The selectad range will indicate the proper quartile, i, e. the botton \(25 \%\), the lower middie \(25 \%\). the upper middle \(25 \%\) or the top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartile.

Standard Industrial Classification 0efinition (SIC 1980):
SIC 6011-Food (Groceries) Stores
Businesses primarily engaged in retailing a general line of groceries such as canned and/or frozen foods, prepared meats. fresh fruit and vegetables. desserts and staples such as tea, coffee, spices. sugar and fiour. Fresh meats and pouitry may be inciuded. in addition,
limited lines of newspapers. magazines. paper products. soft drinks, beer and wine, tobacco products, heaith and beauty aids, housewares, fiowers, plants and other non-food articles may be sold. These businesses include chain grocery stores. convenience food lgroceries) stores, corner grocery stores. food lgroceriesl stores. retail general foods, retail groceries and supermarkets.

## FOOD (SPECIALTY) STORES

SMALL BUSINESS OFFICE

TABLE 1. Selected operating ratios, in percent of sales, 1987
Canada, Food (Specialty) Stores (SIC 6012)

## Symbols

- zaro or no observations
.- too small too be expressed
... not applicable
$\times$ confidential

## Footnotes

(1) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of all businesses in the sample }} \times 100$ for each quartile.
(3) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times$ loo foch quartile,

This portion of the table pertains only to the businesses reporting the specific expense item. therefore thase ratios are calculated individually and the total will not necessarily equal 100\%.

Notes
Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records wers ranked in ascending order according to sales size. Eech quartile li.e, bottom 25\%. lowar middla 25\%, etc.l represents one quarter of the total number of businesses. Within gach quartile, the average ratio is presented. for comparison purposes, the high and low values of sales are shown.

How to use the tables
(il locate the appropriate sales range that is displayed on the two lines entitled maw sales value" and "High sales value".
$(2)$ The selectad range will indicate the proper quartile, i.e. the bot tom $25 \%$, the lower midde $25 \%$, the upper middia $25 \%$ or the top 25\%.
(3) Data pertaining to the salected sales size range will be in that quartile.

## Standard Industrial Classification Definition (SIC 1980):

SlC 6012 - Specialty Food Stores
8usinesses primarily engaged in retail dealing usually in one line of food. included in this industry are those retail bakeries which sell mainly purchased goods and shods which bake their products on the premises and sell them over-the-counter to final consumers.
This industry includes bread and pastry shops, butcher shops, confectionery stores. dairy products stores, delicatessens. fish and sea food stores. fruit and vegetable stores, health food stores. ice cream stores, milk stores and speciaity food stores lexcept take-out food servicesl.

SDURCE: Small Business and Special Surveys Division. Statistics Canada.

# FOREST PRODUCTS TRUCKING INDUSTRY 

CANADA
1987

## SMALL BUSINESS OFFICE

TABLE 1. Selected operating ratios, in percent of sales. 1987
Canada, Forest Produets Trueking Industry (SIC 4565)
Total(1)
Sottom Lower

Uoper
middle
middle $25 \%$
500

## Symbols

zero or no observations
-- too small too be expressed
... not applicablo
$x$ confidential

## Footnotes

(1) These estimetes are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Value in each cell $=\frac{\text { Totel weighted expenditure on a given item }}{\text { Total weighted sales of all businesses in the sample }} \times 100$ for each quartile.
(3) Velue in each cell = Total weighted expenditure on a given item

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal 100\%.

## Notes

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records wera ranked in ascending order according to sales size. Each quartile li.e. bottom 25\%, lower midde 25\%. etc.l represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. For comparispn purposes. the high and low values of sales are shown.

How to use the tables
Ill Locate the appropriate sales range that is displayed on the two lines entitled "low sales value" and wigh sales value".
(2) The selected range will indicate the proper quartile, i, e. the bottom $25 \%$, the lower midde $25 \%$, the upper midde $25 \%$ or the top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartile.

Standard Industrial Classification Deflnition (SIC 1980):
SIC 4565 - Forest Products Trucking Industry
Businesses primarily engaged in transporting pulpwood, wood chips and saw-logs whether or not specialized equipment is used. Included are businesses engaged in the log hauling trucking service. lumber hauling truck service, timber hauling truck service and the wood chips truck hauling service.

(1) The ratios represent the average of ratios for each business in the group and cannot be calculated from the figures shown in table 2 .
i2) These estimates are based on a sample of businesses reporing sales between $\$ 25,000$ and $\$ 2,000,000$.
See Table 1 for symbols and notes.

Definitions:

1. Liquidity ratio:

Current $=$ current assets / current liabilities.
2. Leverage ratios:
a) Debt/equity $=$ total liabilities / equity
b) Debt ratio = total ifabilities / total assets.
c) Interest coverage = net profit interest expense / interest expense.

SOURCE: Small Business and Special Surveys Division. Statistics Canada.

## Footnotes

(1) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$
12) Value in each cell $=\frac{\text { Total weighted expenditure on a given item. }}{\text { Total weighted sales of all businesses in the sample }} \times 100$ for each quartile.

Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times$ loo forh quartile.
This portion of the table pertains only. to the businesses reporting the specific expense item. Therefore these ratios are calculat individually and. the total will not necessarily equal $100 \%$.

## Notes

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile (i.e. bottom 25\%, lowar middle 25\%. etc.) rapresents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. For comparison purposes, the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range that is displayed on the two lines entitled "Low sales value" and "High sales value".
$(2)$ The selected range will indicate the proper quartile, i.e. the bottom 25\%, the lower midde $25 \%$, the Upper midde $25 \%$ or the top $25 \%$.
(3) Data pertaining to the selected sales $s l z e$ range will be in that quartile.

Standard Industrial Ciassification Definition (SIC 1980):
SIC 6213 - Furniture Refinishing and Repair Shops
Businesses primarily engaged in the repair and refinishing of furniture such as retail antique furniture repalr, retail furniture reupholstering, furniture refinishing and repair shops. furniture repair, furniture paint and varnish stripping and polishing of furniture.

SOURCE: Small Business and Special Surveys Division. Statistics Canada.

(1) Average labour units ara calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment. Payroll and Hours, Statistics Canada, Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting na payroll deductions in the following year.
"Newiy reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes.

## Symbols

- zero or no observations
-- too small too be expressed
$\ldots$ not applicable
$\times$ confidential

## footnotes

(1) These estimates are based on a semple of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of all businesses in the sample }} \times 100$ for each quartile.
(3) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item af expenditure }} \times 100$ for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarlly equal $100 \%$.

## Notes

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile (i.e. bottom 25\%, lower middie 25\%..etc.) represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. For comparison purposes, the high and low values of sales are shown.

How to use the tables
(1) locate the appropriate sales range that is displayed on the two lines entitled "Low sales value" and "High sales velue".
(2) The selected range will indicate the proper quartile. i.e. the bot tom $25 \%$, the lower middle $25 \%$, the upper middle $25 \%$ or the top $25 \%$.
(3) Data pertaining to the selected sales size range will be in that quartile.

## Standard Industrial Classification Definition (SIC 1980):

SIC 6351 - Garages (General Repairs)
8usinesses primarily engaged in general mechanical and electrical repairs to motor vehicles. Garages may be secondarily engaged in selling gasoline and lubricating motor vehicles. These businesses include motor vehicle general repairs.

(1) The ratios represent the average of ratios for each business in the group and cannot be calculated from the figures shown in fable 2 .
(2) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.

See Table 1 for symbols and notes.

Definitions:

1. Liquidity ratio:

Current $=$ current assets $/$ current liabilities.

2, Leverage ratios:
al Debt/equity $=$ total $\mid$ iabilities $/$ equity.
b) Debt ratio = total liabilities/total assets.
c) interest coverage = net profit + interest expense / interest expense.

## Footnotes

(11 These estimates are besed on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Value in eech cell $=\frac{\text { lotal weighted expenditure on a given item }}{\text { rotal weighted sales of all businesses in the sample }} \times 100$ for each quartile.
(3) Value in each cell $=$

Total weighted expenditure on a given item
Total weighted sales of businesses reporting this item of expenditure $\times$.
This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal $100 \%$.

## Notes

Data are shown by quartiles when at least 13 of the sempled businesses report the specific item.
Records were ranked in ascending order according to sales size, Each quartile li.e. bottom 25\%, lower midde $25 \%$, etc.l represents one quarter of the total number of businessas. Within each quartile, the avarege ratio is presented. For comperison purposes. the high and low values of sales are shown.

## How to use the tables

(11) Lacate the appropriate sales range that is displayed on the two lines entitled "Low salas value" and "High sales value".
(2) The selected range will indicate the proper quartile, i.e. the botom 25\%. the lower middle 25\%, the upper middle $25 \%$ or the top 25\%.
(3) Data pertaining to the selected salas size range will be in that quartile.

Standard Industrial Classification Definition (SIC 1980):
SIC 6331 - Gasoline Service Stations
Businesses primarily engaged in retail dealing in gasoline, lubricating oils and greases. Inctuded in this industry are firms primarily engaged in lubricating motor vehicles. This industry group includes firms described as: retail diesel fuel. filling stations. gas bars. gasoline service stations. retail gasoline, motor vehicles lubrication services and self-serve gasoline stations.

(1) The ratios represent the average of ratios for each business in the group and cannot be calculated from the figures shown in Table 2 .
(2) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.

See Table 1 for symbols and notes.

Definitions:

1. Liquidity ratio:

Current $=$ current assets / curren: liabilities.
2. Leverage ratios:
al Debt/equity = total liabilities / equity.
b) Debt ratio = total liabilities / total assets.
c) Interest coverage $=$ net profit . interest expense / interest expense.

SMALL BUSINESS OFFICE

TABLE 1. Selected operating ratios, in percent of sales, 1987
Canada, General freight Trucking Industry (SIC 4561)

## Symbols

- zero or no observations
-- too smell too be expressed
... not appliceble
$\times \quad$ confidential
Footnotes
[1] These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Value in each ceil $=$ Total weighted expenditure on a given item

131 Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100$ for each quartile.
This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculed individually and the total will not necessarily equal $100 \%$.

Notes
Oata are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile (i.e, bottom 25\%, lower middle 25\%, etc.l represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. for comparison purposes, the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range thet is displayad on the two lines entited now sales value" and "High sales value".
(2) ine selected range will indlcate the proper quartile. i.e. the bot om $25 \%$, the lower middle $25 \%$, the upper middle $25 \%$ or the top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartile.

Standard Industrial Classification Definition (SIC 1980):
SIC 4561 General Freight Trucking Industry
Businesses primarily engaged in the provision of local and long distance trucking and transfer of general freight. This industry inctudes general freight cartage services, general freight local trucking services. general freight long distance trucking services. general freight transfer trucking services, general freight truck transport services and general freight trucking contractors.

（1）The ratios represent the average of ratios for each business in the group and cannot be calculated from the figures shown in Table 2 ．
（2）These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$ ．
See tablo 1 for symbols and notes．

## Dofinitions：

1．Liquidity ratio：
Current $=$ current assets／current liabilities．

## 2．Leverage ratios：

al Debt／equity $=$ total liabilities／equity．
b）Debr ratio＝total liabilities／total assets．
c）Interest coverage＝net profit－interest expense／interest expense．

TABLE 4. Statement of changes in financial position for incorporated businesses only, 1987 Canada, General freight Trucking Industry (SIC 4561)

(1) These estimates are based on a sample of incorporated businesses reporting sales between $\$ 25,000$ and $\$ 2,000.000$. Sample count includes only those businesses reporting a statement of changes.
See rable 1 for symbols and notes.
TABLE 5. Employment ehainges by size of business, 1984-1987 based on SIC elassification in 1987
Canada, Truck Transport Industrles (SIC 456)

| Business size expressed in average labour units(i) | Number of businesses | $\begin{array}{r} \text { Total payroll } \\ (\$ 000 \text { 's }) \end{array}$ | Average labour units(1) | Changes in number of businesses with paid employees |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | $\begin{array}{r} \text { Newly } \\ \text { reporting(2) } \end{array}$ | No longer reporting(3) |
| 1984 |  |  |  |  |  |
| Total | 18.066 | 2,921.085 | - 136,142 | 3,718 | 2,293 |
| $\begin{aligned} & \text { less than } 20 \\ & 20-99 \\ & 100-499 \\ & 500 \text { and over } \end{aligned}$ | $\begin{array}{r} 16.812 \\ 827 \\ 296 \\ 131 \end{array}$ | 810.160 610.667 699.874 800.384 | $\begin{aligned} & 35,598 \\ & 27,1.93 \\ & 30,521 \\ & 42,830 \end{aligned}$ | $\begin{array}{r} 3.595 \\ 81 \\ 34 \\ 8 \end{array}$ | $\begin{array}{r} 2.225 \\ 39 \\ 24 \\ 5 \end{array}$ |
| 1987 |  |  |  |  |  |
| Total | 21.463 | 3.667,419 | 153,688 | 4.470 | $\cdots$ |
| $\begin{aligned} & \text { less than } 20 \\ & 20-99 \\ & 100-499 \\ & 500 \text { and over } \end{aligned}$ | 20.043 969 321 130 | $\begin{array}{r} 1.059,091 \\ 795,424 \\ 879,811 \\ 932,093 \end{array}$ | $\begin{aligned} & 41.552 \\ & 31.664 \\ & 34.483 \\ & 45.989 \end{aligned}$ | 4,332 95 36 7 | . <br> $\ldots$ <br> $\ldots$ <br> . |

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment. Payroll and Hours. Statistics Canada, Catalogue 12-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are derermined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year
13) Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes.

Footnotes
(1) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Value in each cell $=\frac{\text { Total weighted expenditure on a given } i t e m}{\text { Total weighted sales of all businesses in the sample }} \times 100$ for each quartile.
(3) Velue in each cell $=$
$=\frac{\text { Total weighted expenditure on a given } i t e m}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100$ for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necesserily equal io0\%.

## Notes

Data are shown by quartiles when at leest 13 of the sempled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile (i.e. bottom 25\%, lower middle 25\%, etc.) represents one querter of the total number of businesses. Within each quartile, the average ratio is presented. for comparison purposes. the high and low values of sales are shown.

How to use the tables

121 The selected renge will indicate the proper quartile, i.e. the bottom $25 \%$, the lower middle $25 \%$, the upper middle $25 \%$ or the top 25x.
(3) Data pertaining to the selected sales size range will be in that quartile.

Standard Industrial Classification Definition (SIC i980):
SIC 6412 - General Stores
8usinesses primarily engaged in retail dealing in a general line of merchandise on a non-departmentai basis, the most important of which is. food. Other merchandise sold usually includes ready-to-wear apparel, tolletries, cosmetics, hardware. farm supplies and housewares. 8usinesses may be described as: country general stores and general stores.

SOURCE: Smali Business and Special Surveys Division, Statistics Canada.

(1) The ratios represent the average of ratios for each business in the group and cannot be calculated from the figures shown in table 2 . (2) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.

See Table 1 for symbols and notes.

Definitions:

1. Liquidity ratio:

Current = current assets / current liabitities.
2. Leverage ratios:
a) Debt/equity = total liabilities / equity.
b) Debt ratio = total liabilities / total assets.
c) Interest coverage $=$ net profit + interest expense / interest expense.

| 500 and over | - | - | - | - | $\cdots$ |

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment. Payroll and Hours. Statistics Canada. Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a dusiness has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes.

Symbols

- zero or no observations
-- too smal! too be expressed
... not applicabie
$\times$ confidential
Footnotes
(1) These estimetes are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Velue in each cell Total weighted expenditure on a given item $\times 100$ for each quartile. Total weighted sales of all businesses in the sample
(3) Value in each cell = Total weighted expendlture on a given item

Ihis portion of the table pertains only to the businesses reporting the specific expense item. therefore these ratios are calculat individually and the totai will not necessarily equal $100 \%$.

Notes
Data are shown by quartiles when at least 13 of the samplad businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile (i.e. bottom 25\%. lower midde 25\%, etc.l reprasants one quarter of the total number of businesses. Within each quartile. the average ratio is presented. For comparison purposes. the high and low values of sales are shown.

How to use the tables
(1) Locate tha appropriate sales range that is displayed on the two lines entitled "low sales value" and "High sales value".
(2) The selected range will indicate the proper quartile. i.e. the bottom $25 \%$, the lower middie $25 \%$, the upper middle $25 \%$ or the top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartile.

## Standard Industrial Classification Definition (SIC 1980):

SIC 6531 - Herdware Stores
Businesses primarily engaged in retai dealing. in any combination of the basic lines of hardware, such as hand and power tools, builders. hardware. fasteners. electrical and plumbing supplies. These businesses may be secandarily engaged in retaiting housewares. electrical appliances. paint. sporting goods. etc. This industry includes retail builders' hardware. retail carpenters' tools, retail electrical supplies, retail fasteners lexcept clothingl, retail furniture and cabinet fittings, retail hand edge tools, hardware stores, retail mechanics' measuring tools, retail mpchanics' tools, retail nails, retail plumbing supplies and retail power driven hand tools.

（1）These estimates are based on a sample of incorporated businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$ ．Sample count includes only those businesses reporting a statement of changes．
See Table 1 for symbols and notes．

TABLE 5．Employment changes by size of business，1984－1987 based on SIC classification in 1987
Canada，Hardware，Paint，Glass and Wallpaper Stores（SIC 653）

| Business size expressed in average labour units（1） | ．Number of businesses | $\begin{array}{r} \text { Total payroll } \\ \left(\$ 000^{\prime} \mathrm{s}\right) \end{array}$ | Average labour units（1） | Changes in number of businesses with paid employees |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | $\begin{array}{r} \text { Newly } \\ \text { reporting(2) } \end{array}$ | No longer reporting（3） |
| 1984 |  |  |  |  |  |
| Total． | 4，282 | 295，060 | 23.177 | 548 | 352 |
| $\begin{aligned} & \text { less than } 20 \\ & 20-99 \\ & 100-499 \\ & 500 \text { and over } \end{aligned}$ | $\begin{array}{r} 4.146 \\ 120 \\ 13 \\ 3 \end{array}$ | $\begin{array}{r} 196,242 \\ 47,438 \\ 15,992 \\ 35,388 \end{array}$ | $\begin{array}{r} 15.610 \\ 3.582 \\ 1.191 \\ 2.794 \end{array}$ | 537 9 1 1 | 344 7 1 - |
| 1987 |  |  |  |  |  |
| Total | 4，554 | 397，401 | 27.210 | 610 | ．． |
| $\begin{aligned} & \text { less than } 20 \\ & 20-99 \\ & 100-499 \\ & 500 \text { and over } \end{aligned}$ | 4.352 182 12 8 | $\begin{array}{r} 250.900 \\ 79.720 \\ 14.302 \\ 52.479 \end{array}$ | $\begin{array}{r} 17.356 \\ 5.394 \\ 949 \\ 3.511 \end{array}$ | 582 .25 1 2 | $\ldots$ $\ldots$ $\cdots$ |

（1）Average labour units are calculated by dividing total payroli by the average annual wage and salary rate as reported in the Survey of Employment，Payroll and Hours．Statistics Canada．Catalogue 72－002．An average labour unit could be interpreted as a full－time employee．Note that the business size groups used are determined at the Canada level．Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group．
（2）Refers to businesses reporting no payroll deductions in the previous year．
（3）Refars to businesses reporting no payroll deductions in the following year．
＂Newly reporting＂and＂no longer reporting＂businesses are assumed to have been in activity for six months and the information is adjusted accordingly．

See Table 1 for symbols and notes．

## Symbols

- zero or no obsarvations
-. too small too be expressed
... not applicable
$\times$ confidential

## Footnotes

(1) These estimates are based on a sample of businesses reporting sales between $\$ 25.000$ and $\$ 2,000,000$.
(2) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of all businesses in the sampla }} \times 100$ for each quartile.
(3) Value in eech cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100 \quad$ for quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal $100 \%$.

## Notes

Data are shown by quartiles when at least 13 of the sampled businesses report the specific iten.
Records were ranked in ascending order according to sales size. Each quartile (i.e. bottom 25\%. lower middie 25\%. etc.) represents one quarter of the total number of businesses. Within each quartile. the average ratio is presented. For comparison purposes, the high and low values of sales are shown.

How to use the tabies
(1) Locete the appropriata sales range that is displayed on the two lines entitled "Low sales value" and "High sales value".
(2) The selected range will indicate the proper quartile, i.e. the botom $25 \%$, the lower middle $25 \%$, the uppar midde $25 \%$ or the top 25\%.
(3) Data pertaining to tha selected sales size range will be in that quartile.

## Standard Industrial Classification Definition (SIC. 1980):

SIC 3060 - Hardware, Tool and Cutlery Industries
Businesses primarily engaged in manufacturing basic hardware; metal dies, moulds and patterns; hand tools and implements lexcept power-driven): cutlery (except sitver) and hardware not elsewhere classified.

SOURCE: Small Business and Special Surveys Dlvision, Statistics Canada.

$(21$ These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
see fable 1 for symbals and notes.

Definitions:

1. Liquidity ratio:

Current $=$ current assets / current liabilities.
2. Leverage ratios:
a) Debt/ecuity = total liabilities / equity
b) Debt ratio = totai liabilities / total assets.
c) Interest. coverage $=$ net profit + interest expense / interest expense.

SDURCE: Smali Business and Special Surveys Division. Statistics Canada.

| 1987 |  |  |  |  |  |
| Total | 1.293 | 651,386 | 21,826 | 151 | -•• |
| $\begin{aligned} & \text { less than } 20 \\ & 20-99 \\ & 100-499 \\ & 500 \text { and over } \end{aligned}$ | 994 209 65 25 | $\begin{aligned} & 151,638 \\ & 234,515 \\ & 155,689 \\ & 109,544 \end{aligned}$ | $\begin{aligned} & 4,993 \\ & 7,631 \\ & 5,121 \\ & 4,081 \end{aligned}$ | 132 14 4 1 | $\cdots$ |

(1) Average labour units are calculated by dividing total payroll by the average annuel wage and salary rate as reported in the Survey of Employment. Payroll and hours, Statistics Canada, Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are detarmined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses peporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll daductions in the following year.
"Newty reporting" and "no longer reporing" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes.

SOURCE: Small Business and Special Surveys Division. Statisiics Canada.

$\frac{\operatorname{CANADA}^{\ldots}}{1987}$

SMALL BUSNESS OFFTCE

TABLE 1. Selected operating ratios, in percent of sales, 1987
Canada, Hotels and Motor Hotels (SIC 9111)

## Symbols

- zero or no observations
-- too smali too be expressed
... not applicable
$\times$ confidential

## Footnotes

(1) These estimates are based on a sampla of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.

Value in each cell $=$ Total weighted expenditure on a given item
(2) Value in each cell $=\frac{\text { Total weighted sales of all businesses in tha sample }}{\times 100}$ for each quartile.
(3) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businessas reporting this item of expenditure }} \times 100$ for each quartile.

This portion of the table partains only to the businesses reporting the specific expensa item. Therefore these ratios are calculated individually and the total will not necessarily equal $100 \%$.

## Notes

Data are shown by quartiles when at least 13 of the samplod businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quariile (i.e. bot tom $25 \%$. lower middle 25\%. etc.) represents one quarter of the total number of businesses. Within each quartile. the ayerage ratio is presented. for comparison purposes, the high and low values of sales are shown.

## How to use the tables

(1) Locate the appropriate sales range that is displayed on the two lines entitled "Low sales value" and uhigh sales value"
(2) The selected range will indicate the proper quartile, i.e. the bottom $25 \%$, the lower middie $25 \%$, the upper middle $25 \%$ or the top 25\%.
3) Data pertaining to the selected sales size range will be in that quartile.

## Standard Industrial Ciassification Definition (SIC 1980):

SIC 9111 - Hotels and Motor Hotels
Business primarily engaged in providing short term accommodation to the public with or without food. beverage and other services. A hotel-type room has access only from the interior of the building and a motel-hotel type room has access from both the interior and exterior. Included are businesses engaged in hostels. hotel accommodation services lexcept apartment hotelsl. hotel lodging services lexcept apartment hotelsl. hotels lexcept apartment and private hotelsl and motor hotels.

(1) The ratios represent the average of ratios for each business in the group and cannot be calculated from the figures shown in rabie 2 .
(2) These estimates are based on a sample of businesses raporting sales between $\$ 25,000$ and $\$ 2,000,000$.

Ses table 1 for symbols and notes.

## Definitions:

1. Liquidity ratio:

Current = current assets / current liabilities.
2. Leverage ratios:
a) Debt/equity = total liabilities / equity.
b) Debt ratio = totai liabilities / total assets.
c) Interest coverage = net profit + interest expense / interest expense.

See table 1 for symbols and notes.

TABLE 5. Employment changes by size of business, 1984-1987 based on SIC classification in 1987
Canada, Hotels and Motor Hotels (Sic 9111)

(1) Average labour units are calculated by dividing total payroll by tha average annual wage and salary rate as reported in the Survey of Employment. Payroll and Hours. Statistics Canada. Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that numbar in any given province it is shown in the 500 and over group.
121 Refers to businesses reporting no payrolt deductions in the provious year.
(3) Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See table 1 for symbols and notes.

## Footnotes

(1) These estimates are based on a sample of businesses reperting sales betwean $\$ 25,000$ and $\$ 2,000,000$
(2) Value in each cell $=\frac{\text { Total waighted expenditure on a given item }}{\text { Total weighted sales of all businesses in the sample }} \times 100$ for each quartile
(3) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businasses reporting this item of expenditure }} \times 100$ for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not nacessarily equal loox.

## Notes

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile li.e. bottom 25\%. lowar middle $25 \%$, etc.) represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. For comparison purposes. the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales tange that is displayed on the two lines entitled "Low sales value" and "high sales value".
(2) The selected fange will indicate the proper quartile, i.e. the bottom $25 \%$, the lower middle $25 \%$, the upper middle $25 \%$ or the top $25 \%$.
(3) Data pertaining to the selected sales size range will be in that quartile.

Standard Industrial Classification Definition (SIC 1980):
SIC 26ito - Household Furniture Industries
Businesses primarily engaged in manufacturing household furniture, of all kinds and of all materials.

(1) The ratios represent the average of ratios for each business in the group and cannot be calculated from the figures shown in rable 2 .
(2) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.

See Table 1 for symbols and notes.

Definitions:

1. Liquidity ratic:

Current $=$ current assets / current liabilities
2. Leverage ratios:

Debt/equity $=$ total liabilities / equity.
b) Debt ratio $=$ total liabilities / total assets.
cl Interest coverage = net profit + interest expense / interest expense.

TABLE 4. Statement of changes in financial position for incorporated businesses only, 1987
Canada, Household Furniture Industries (SIC 261)

(1) These estimates are based on a semple of incorporated businesses reporting sales between $\$ 25,000$ ana $\$ 2.000,000$. Sample count includas only those businesses reporting a statement of changes.
See Table 1 for symbols and notes.
TABLE 5. Employment changes by size of business, 1984-1987 based on SIC classification in 1987 Canada, Household Furniture Industries (SIC 261)

| Business size expressed in average labour units(1) | Number of businesses | $\begin{array}{r} \text { Total payroll } \\ \left(\$ 000{ }^{\prime} \mathrm{s}\right) \end{array}$ | Average labour units(1) | Changes in number of businesses with paid employees |  |

## Footnotes

11) These estimates are besed on a sample of businesses reporting sales betwaen $\$ 25,000$ and $\$ 2,000,000$
(2) Vaiue in each cell $=\frac{\text { Total weightad expenditure on a given itam }}{\text { Total weighted sales of all businesses in the sample }} \times 100$ for each quartile.
(3) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted saies of businesses reporting this item of expenditure }} \times 100 \quad$ for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calated individually and the total will not necessarily equal $100 \%$.

Notes
Data are shown by quartiles when et least 13 of the sampled businesses report the specific item
Records ware ranked in ascending order according to sales size. Each quartile li.e, bottom 25\%, lower middle 25\%, etc.l represents one querter of the total number of businesses. Within each quartile. the average ratio is presentad. For comparison purposes, the high and low valuas of sales are shown.

How to use the tables
(1) Locate the appropriate sales renge that is displayed on the two lines entitled "how sales value" end "High selas value".
(2) The selected range wili indicete the proper quartile, i.e. the bottom $25 \%$, the lower middle $25 \%$. the upper middle $25 \%$ or the top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartile.

Standard Industrial Classification Definition (SIC 1980):
SIC 6210 - Household Furniture Stores
Businesses primarily engaged in retail dealing in household furniture. Businesses primarily engaged in furniture refinishing and repair are included in this industry group.

Symbols
zero or no observations
-- too small too be expressed
... not applicable
$\times$ confidential
Footnotes
(1) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of all businesses in the sample }} \times 100$ for each quartile
(3) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times$. 100 for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individuelly and the total will not necessarily equal $100 \%$.

## Notes

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile (i)e. bottom $25 \%$, lower middle $25 \%$, etc. 1 represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. for comparison purposes, the high and low values of sales are shown.

How to use the tables
(11) Locate the appropriate sales range thet is displayed on the two lines entitled "low sales value" and "High sales value".
(2) The selected range will indicate the proper quartile, i.e. the botiom $25 \%$, the lower middle $25 \%$, the upper middle $25 \%$ or the top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartile.

## Standard Industrial Classificstion Definition (SIC 1980):

SIC 9911 - Industrial Machinery and Equipment Rental and Leasing
Businesses primarily engaged in the rental or leasing of heavy industrial machinery and equipment. Businesses engaged in agricultural machinery and equipment rentals, industrial machinery and equipment rental and leasing. leasing of industrial machinery and equipment. industrial machinery and equipment rentals, materials handing machinery and equipment rentals lexcept with operatorsl, metalworking machinery and equipment rentals, mining machinery and equipment rentals. oil well drilling machinery and equipment rentals, rental of industrial machinery and equipment and woodworking machinery and equipment rentals are included in this industry.

| $\begin{aligned} & \text { less then } 20 \\ & 20-99 \\ & 100-499 \\ & 500 \text { and over } \end{aligned}$ | 851 110 54 8 | 67.256 <br> 73.810 <br> 71.196 <br> 11.158 | 3.297 3.527 3.625 549 | 129 9 16 1 | . . . |

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours, Statistics Caneda. Catalogue 72-002, An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.

131 Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer: reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See fable 1 for symbols and notes.

(i) The ratios represent the average of ratios for each business in the group and cannot be calculated from the figures shown in iable 2 .
(2) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.

See Table 1 for symbols and notes.

Dafinitions:

1. Liquidlty ratio:

Current = current assets / current liabilities
2. Leverage ratios:
a) Debt/equity = total liabilities / equity.
b) Debr ratio = total liabilities / total assets.
c) Interest coverage $=$ net profit . interest expense $/$ interest expense.

SOURCE: Small Business and Special Surveys Division, Statistics Canada.

TABLE 4. Statement of changes in financial position for incorporated businesses only, 1987
Canada, Insurance and Real Estate Agencies (SIC 7611)

(11) These estimates are based on a sample of incorporated businesses reporting sales between $\$ 25,000$ and $\$ 2,000.000$. Sample count includes only those businesses reporting a statement of changes.
See fable 1 for symbols and notes.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the

Survey of Employment. Payroll and Hours. Statistics Canada, Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
13) Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes.

SDURCE: Small Business and Special Surveys Division, Statistics Canada.

TABLE 1. Selected operating ratios, in percent of sales, 1987
Canada, Janitorial Services (SIC 9953)

## Symbols

- zero or no observations
-. too small too be expressed
... not applicable
$\times$ confidential
Footnotes
(1) These estimetes are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2.000,000$
(2) Value in aach cell = Total weighted expenditure on a given item
$\left(21\right.$ Value in ach cell $=\frac{\text { Total weighted expenditure on agiven item }}{\text { Total weighted sales of all businesses in the sample }} \times 100$ for each quartile. Total weighted expenditure on a given item
131 Value in eacn cell $=\overline{\text { Total weighted sales of businessas reporting this itam of expenditure }} \times$ for quartile.
This portion of the table pertains only to the businesses reporting the specific expense item. therefore these ratios are calculated individually and the total will not necessarily equal 100\%.

## Notes

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item
Records were ranked in ascending order according to saies size. Each quartile (i.e. bottom 25\%, lower middle 25\%, ete.) represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. For comparison purposes, the high and low values of sales are shown

How to use the tables
(i) Locate the appropriate sales range that is displayed on the two lines entitled "Low sales value" and wigh sales valuen.
(2) The selected range will indicate the propar quartile, i.e. the bottom $25 \%$, the lower middle $25 \%$, the upper middle $25 \%$ or the top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartile.

## Standard Industrial Classification Dsfinition (SIC 1980):

SIC 9953 - Janitorial Services
Businesses primarily engaged in cleaning and maintenance of buildings and dwellings such as char service, floor waxing. janitorial services, janitorial maintenance of buildings and dwellings and office cleaning.

TABLE 2. Balance sheet profile for incorporated businesses only, 1987
Canada, Janitorial Services (SIC 9953)

(1) These estimates are based on a sample of businesses reporting saies between $\$ 25,000$ and $\$ 2,000,000$.

See Table 1 for symbols and notes.

## Footnotes

(1) These estimetes are based on a sample of businesses reporting sales between $\$ 25.000$ and $\$ 2,000.000$.
(2) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of all businesses in the sample }} \times 100$ for each quartile.
(3) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Totel weighted sales of businesses reporting this item of expenditure }} \times 100$ for each quartile.
this portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal $100 \%$.

Notes
Data are shown by quartiles when at least 13 of the sampled businesses feport the specific item.
Records ware ranked in ascending order according to sales size. Each quartile li.e. bottom 25\%, lower middle $25 \%$, etc.l pepresents one quarter of the total number of businesses. Hithin each quartile, the average ratio is presented. for comparison purposes, the high and low values of sales are shown

How to use the tables
(1) Locate the appropriate sales range that is displayed on the two lines entitled "Low sales valuen and "High sales value".
(2) The selected range will indicate the proper quartile, i.e. the bottom $25 \%$, the lower middle $25 \%$, the upper middle $25 \%$ or the top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartile.

Standard Industrial C(assification Definition (SIC 1980):
SIC 6561 - Jewellery Stores
Businesses primarily engaged in retail dealing in new jewellery. Many such businesses have a department engages in watch, clock and jewellery repair, Businesses engaged in retall costume jewellery, custom jewellery. retail precious metal flatware and hollow ware. retail jewellery, retail precious metal jewellery. retail precious stone jewellery and retail watches and clocks are also included in this industry.

(1) These estimates are basad on a sample of incorporated businesses reporting sales between $\$ 25,000$ and $\$ 2,000.000$. Sample count includes only those businesses reporting a statement of changes.
Sae rable 1 for symbols and notes.
TABLE 5. Employment changes by size of business, 1984-1987 based on sic ciassification in 1987 Canada, Jewellery Stores (SIC 6561)

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment. Payroll and Hours. Statistics Canada. Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
12) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingiy.

See Table 1 for symbols and notes.

Symbols -

- zero or no observations
-- too small too be expressed
... not applicable
$\times$ confidential
Footnotes
111 These estimates are based on a sample of businesses reporting seles between $\$ 25,000$ and $\$ 2,000,000$
$(2)$ Value in $\quad$ lotal weighted expenditure on a given item
(3) Value in each cell $=\frac{\text { Total waighted expenditure on a given item }}{\text { Tatal waighted sales of businesses reporting this item of expenditure } \times 100}$ for each quartile.

This portion of the tabla pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal 100\%.

## Notes

Data are shown by quartiles when at last 13 of the sampled businesses report the specific item.
Records were renked in ascending order accopding to sales size. Each quartile (i.e. bottom 25\%, lower midde 25\%, etc.l represents one quarter of the total number of businesses. Within egch quartile, tha average ratio is presented. For comparison purposes, the high and low values of sales are shown.

How to use the tables
(1) Lacate the appropriate sales range that is displayed on the two lines entitled "Low sales value" and "High sales value"
(2) The selectad range will indicate tha proper quartile, i.e. the botom 25\%, the lower middle $25 \%$, the upper midde $25 \%$ or the top 25\%.
(3) Date partaining to the selected sales size range will be in that quartile.

Standard Industrial Classification Definition (SIC 1980):
SIC 9720 - Laundries and Cleaners
Businesses primarily engaged in providing laundering, dry cleaning, valet, carpet cleaning and linen supply services.

TABLE 2. Balance sheet profile for incorporated businesses only, 1987

## Footnotes

(1) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
12) Value in each call $=$ Total weighted expenditure on a given item
(3) Value in aach cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weightad sales of businesses reporting this item of expenditure }} \times$ ioo for each quartile.

This portion of the table pertains only to the businasses reporting the specific expense item. Therefore these ratios are calculat individually and the total will not necessarily gqual 100\%.

Notes
Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascanding order according to sales size. Each quartile fi.e. bottom 25\%, lower midde 25\%, etc.l represents one quartar of the total number of businesses. Within each quartile, the average ratio is presented. For comparison purposes, the high and low values of sales are shown.

How to use the tables
(11) Locate the appropriate sales range that is displayed on the two linas entitled "Low sales value" and "High sales value".
(2) The selected range will indicate the proper quartile, i.e. the bottom $25 \%$, the lower middle $25 \%$, the upper midde $25 \%$ or the top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartile.

Standard Industrial Classification Definition (SIC 1980):
SIC 9211 - Licensed Restaurants
Businesses primarily engaged in preparing and serving meals for consumption on the premises with a license to serve alcoholic beverages. licensed food and beverage service restaurants, licensed restaurants and licensed restaurant services are included in this industry.

(2) These estimates are based on a sample of businesses reporting sales between \$25,000 and \$2,000,000.

See Table $\mid$ for symbols and notes.

## Definitions

1. Liquidity ratio:

Current = current assets / current liabilities.
2. Leverage ratios:
a) Debt/equity = total liabilities / equity.
b) Debt ratio $=$ total liabilities / total assets.
c) Interest coverage $=$ net profit + interest expense / interest expense.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours. Statistics Canada. Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes.

## Footnotes

(1) These estimates are based on a sample of businesses peporting sales batween $\$ 25,000$ and $\$ 2,000,000$.
(2) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of all businesses in the sample }} \times 100$ for each quartile.
(3) Value in each cell $=$ $\qquad$
Total weighted sales of businesses reporting this item of expenditure $\times 100$ for each quartile
This portion of tha table pertains only to the businesses reporting the spacific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal $100 \%$.

## Notes

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile (i.e. bottom 25\%, lower middle $25 \%$. etc.) represents one quarter of the total number of businesses. Hithin each quartile, the average ratio is presented. For comparison purposes, the high and low values of sales are shown.

## How to use the tables

(1) Locate the appropriate sales range that is displayed on the two lines entitled "Low sales value" and "High sales value"
(2) The selected range will indicate the proper quartile, i.e. the bottom $25 \%$, the lower middle $25 \%$, the upper middle $25 \%$ or the top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartile.

## Standard Industrial Classification Definttion (SIC 1980):

SIC 0411 - Logging Industry
Businesses primarily engaged in harvesting hardwood and softwood trees on an own-account basis. Included are businesses primarily
angaged in the combined activities driving, booming, sorting and rafting and towing of wood. Barking mills are also included.
These businesses include barking (rossingl logs, booming logs, bucking trees, bunching logs. chipping logs, Christmas tree cutting.
contract logging. felling trees lloggingl, fuelwood cutting. log salvaging, log scaling. logs and bolts. untreated wooden pit props.
untreated wooden poles and pilings, pulpwood cutting, sawlogs, veneer logs and wood chips.

(1) These estimates are based on a sample of incorporated businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$. Sample count includes only those businesses reporting a statement of changes.
See Table 1 for symbols and notes.

TABLE 5. Employment changes by size of business, 1984-1987 based on SIC ciassifieation in 1987 Canada, Logging Industry (SIC 0411)

| Business size expressed in |
| :--- | :--- | :--- | :--- |
| average labour units(1) |

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment. Payroll and Hours, Statistics Canada. Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
121 Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See lable $\mid$ for symbols and notes.

SOURGE: Small Business and Special Surveys Division. Statistics Canada.

## Footnotes

(1) These estimetes are based on a sample of businesses reporting sales between $\$ 25.000$ and $\$ 2,000.000$
(2) Value in each cell $=\frac{\text { Total weighted expenditure on a given itent }}{} \times 100$ for eech quartile.
(3) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100$ for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these retios are calculated individually and the total will not necesserily equal $100 \%$.

Notes
Oata are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile li.e. bottom 25\%. lower middle 25\%, etc. 1 represents one quarter of the total number of businesses. Hithin each quartile, the average ratio is presented. For comparison purposes, the high and low values of sales are shown.

How to use the tables
11) locate the appropriate sales range that is displayed on the two lines entitled "Low sales value" and "High sales value".
(2) The selected range will indicate the proper quartile. i.e. the botom $25 \%$, the lower middle $25 \%$. the upper middle $25 \%$ or the top $25 \%$.
(3) Data pertaining to the selected sales size range will be in that quartile.

Standard Industrial Classification Definition (SIC 1980):

## SIC 3081 - Machine Shop Industry

Businesses primarily engaged in manufacturing machine parts and equipment, other than complete machines. for the trade. This industry includes machine shops providing custom and repair services. Businesses primarily engaged in rebuilding or remanufacturing automotive engines are included here.

(1) The ratios represent the average of ratios for each business in the group and cannot be calculated from the figures shown in table 2 .
(2) Thase estimates are based on a sample of businesses reporing sales between $\$ 25,000$ and $\$ 2,000,000$.

See Table 1 for symbols and notes.

## Definitions:

1. Liquidity ratio:

Current $=$ current assets / current liabilities.
2. Leverage ratios:
a) Debt/equity $=$ total liabilities / equity.
b) Debt ratio $=$ total liabilities / total assets.
c) Interest coverage = net profit $\operatorname{linterest~expense~/~interest~expense.~}$

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the

Survey of Employment. Payroll and Hours. Statistics Canada. Catalogue 72-002. An average labour unit could be interpreted as a
full-time amployae, Note that the business size groups used are determined at the canada level Thus if a business has at leas 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
2) Refers to businesses reporting no payroll deductions in the previous year.

31 Refers to businesses reparting no payroll deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See table 1 for symbols and notes.

SMALL BUSNESS OFFICE

TABLE 1. Selected operating ratios, in percent of sales, 1987
Canada, Management Consulting Services (SIC 7771)

## Symbols

- zero or no observations
-- too small too be expressed
... not applicable
$\times$ confidential

## Footnotes

(1) These estimates are based on a sample of businesses reporiing sales between $\$ 25,000$ and $\$ 2,000,000$. Total weighted expenditure on a given item
(2) Value in each cell $=\frac{\text { Total weighted sales of all businesses in the sample }}{} \times 100$ for each quartile
$\left\{31\right.$ Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this iten of expenditure }} \times$ foo for each quartile.
This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculat individually and the total will not necessarily equal $100 \%$.

Notes
Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile fi.e. bottom 25\%, lower middle 25\%, etc.) represents one quarter of the total number of businesses. Hithin each quartile, the average ratio is presented. For comparison purposes, the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range that is displayed on the two lines entitled "low sales value" and "High sales value".
$(2)$ The selected range will indicate the proper quartile, i.e. the bot tom $25 \%$, the lower middle $25 \%$, the upper middle $25 \%$ or the top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartile.

Standard Industrial Classification Definition (SIC 1980):
SIC 7771 - Management Consulting Services
Businesses primarily engaged in providing business and management consulting services such as: business management consulting services. customs consultants. financial management consultants, manager development consultants. office systems management consultants, organization management consultants, personnel management consultants and tariff and customs consultants.

111 The ratios represent the average of ratios for each business in the group and cannot be calculated from the figures shown in table 2 .
12) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.

See Table 1 for symbols and notes.

## Definitions:

1. Liquidity ratio:

Current = current assets / current liabilities.
2. Leverage ratios:
a) Debt/equity $=$ total $\mid$ iabilities / equity.
bl Debt ratio = iotal liabilities / total assets
c) Interest coverage $=$ net profit + interest expense $/$ interest expense.

## Footnotes

（1）These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$
（2）Value in each cell $=$ Total weighted expenditure on a given item
（3）Velue in eech cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times$ loo forh quartile．
This portion of the table pertains only to the businesses reporting the specific expense item．Therefore these ratios are calculated individually and the total will not necessarily equal $100 \%$ ．

## Notes

Data are shown by quartiles when at least 13 of the sampled businessas report the specific item．
Records were ranked in ascending order according to sales size．Each quartile（i．e．bottom 25\％，lower middle 25\％，etc．）represents one quarter of the total number of businesses．Hithin each quartile，the average ratio is presented．for comparison purposes，the high and low values of sales are shown．

## How to use the tables

（1）Locate the appropriate sales range that is displayed on the two lines entitled wow sales valuen and＂high sales value＂．
（2）The selected range will indicate the proper quartlle，i．e．the bottom $25 \%$ ，the lower midde $25 \%$ ．the upper midde $25 \%$ or the top $25 \%$ ．
（3）Data perteining to the selected sales size range will be in that quartile．

## Standard Industrial Classification Definition（SIC 1980）：

SIC 4231 －Masonry Contractors
Businesses primarily engaged in conventional or specialty masonry work，except interior marble work．Installation of architectural stone． blocklaying，brick or stone lining lchimney，kiln，boiler，etc．j bricklaying，installation of granite lexterior work）．installation of marble lexterior work）．masonry work，installation of ornamental stone，pointing masonry，installation of slate lexterior workl，stone cutting and setting and the installation of veneer facing stone or brick are included．

(1) These estimates are based on a sample of incorporated businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$. Sample count includes only those businesses reporting a statement of chenges.
See Table 1 for symbols and notes.

TABLE 5. Employment changes by size of business, 1984-1987 based on SIC classification in 1987
Canada, Masonry Work (SIC 4231)

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment. Payroll and Hours. Statistics Canada, Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
121 Refers to businesses reporting no payroll deductions in the previous year.
131 Refers to businesses reporting no payroll deductions in the following year
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbots and notes.

Footnotes
(11) These estimates are based on a sample of businesses reporting sales between $\$ 25.000$ and $\$ 2.000,000$.
(2) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of all businesses in the sample }} \times 100$ for each quartile.
(3) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100$ for each quartile.

This portion of the tabla pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal $100 \%$.

Notes
Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile li.e. botom 25\%. lower middie $25 \%$, etc.l represents one quarter of the total number of businesses. Within each quartile. the average ratio is presented. For comparison purposes, the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range that is displayed on the two lines entitled "Low sales value" and "high sales value"
(2) The selected range will indicete the proper quartile, i.e. the botiom $25 \%$. the lower middie $25 \%$, the upper middie $25 \%$ or the top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartile.

## Standard Industrial Classification Definition (SIC 1980):

## SIC 6121 - Men's Clothing Stores

Businesses primarily engaged in retail dealing in men's and boys' clothing lexcept athleticl and accessories. Businesses primarily engaged in custom tailoring are included here. Businesses engaged in retail men's and boys' apdarel, retail men's and boys' beachwear, retail men's and boys' clothing. men's custom tailored clothing. men's retail gloves, haberdashery. retail men's and boys' hats and caps, retail men's and boys' hosiery, retail men's and boys' jackets. retail men's and boys' neckwear, men's clothing stores. retail men's furnishings, retail men's and boys' overcoats, retail men's and boys' pants and slacks, retail men's and boys'shirts. retail men's and boys' sleep and loungewear, retail men's and. boys' sportswear, retail men's and boys' suits, retail men's and boys' sweaters. retail men's and boys' swimwear, retall men's and boys' underclothing, retail men's and boys' uniforms lexcept athleticl and retail men's and boys clothing are included in this industry.

$\times$ confidential

## Footnotes

(1) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2.000,000$
(2) Value in , Total weighted expenditure on a given item

Value in each cell $=\overline{\text { Total weighted sales of all businesses in the samplo }}$ $\times 100$ for each quartile.

131 Vaiue in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100$ for each quartile.
This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal 100\%.

## Notes

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile (i.e, bottom 25\%, lower middle $25 \%$, etc.) represents one quarter of the total number of businesses. Within each quartile. the average ratio is presented. For comparison purposes, the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range that is displayed on the two lines entitled "how sales value" and "High sales value".
(2) The selected range will indicate the proper quartile, i.e. the botom $25 \%$, the lower middle $25 \%$, the upper middle $25 \%$ or the top $25 \%$.
(3) Data pertaining to the selected seles size range will be in that quartila.

Standard Industrial classification Definition (SIC 1980):
SIC 9112 - Motels
Businesses primarily engaged in short term accommodation to the public with or without food, beverage and other services. A motel-type room has access from the exterior only and generally has parking facilities in close proximity. these businesses include motel accommodation services, motel lodging services and motels.

SOURCE: Small 8usiness and Special Surveys Division, Statistics Canada.

(1) The ratios represent the average of ratios for each business in the group and cannot be calculated from the figuras shown in table 2 .
(2) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.

See Table 1 for symbols and notes.

Definitions:

1. Liquldity ratio:

Current = current assets / current liabilities.
2. Leverage raxios:
a) Debt/equity = total liabilities / equity
b) Debt ratio $=$ total liabilities / total assets.
c) Interest coverage $=$ net profit - interest expense / interest expense.

SOURCE: Small 8usiness and Special Surveys Division, Statistics Canada.

TABLE 4. Statement of changes in financial position for incorporated businesses only, 1987
Canada, Motels (SIC 9112)

(i) These estimates are based on a sample of incorporated businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$. Sample. count includes only those businesses reporting a statement of changes.
See Table 1 for symbols and notes.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment. Payroll and Hours. Statistics Canada, Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table $i$ for symbols and notes.

SOURCE: Small Business and Special Surveys Division. Statistics Canada.

(1) The ratlos represent the average of ratios for each business in the group and cannot be calculated from the figures shown in table 2.
(2) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.

See rable 1 for symbols and notes.

Definitions:

1. Liquidity ratio:

Current $=$ current assets $/$ current liabilities.
2. Leverage ratios:
al Debt/equity = total liabilities $/$ equity.
b) Debt ratio = total liabilities/total assets.
c) Interest coverage $=$ net profit , interest expense $/$ interest expense.

| Total | 1.230 | 88,815 | 5,849 | 196 | 143 |
| $\begin{aligned} & \text { less than } 20 \\ & 20-99 \\ & 100-499 \\ & 500 \text { and over } \end{aligned}$ | 1.169 48 13 - | $\begin{array}{r}44.199 \\ 14.433 \\ 8.183 \\ \hline\end{array}$ | $\begin{array}{r} 3,865 \\ 1.258 \\ 726 \end{array}$ | $\begin{array}{r}192 \\ 3 \\ 1 \\ \hline\end{array}$ | 135 2 6 - |
| 1987 |  |  |  |  |  |
| Total | 1,257 | 90,262 | 6,704 | 186 | $\cdots$ |
| $\begin{aligned} & \text { less than } 20 \\ & 20-99 \\ & 100-499 \\ & 500 \text { and over } \end{aligned}$ | $\begin{array}{r}1.179 \\ 53 \\ 25 \\ \hline\end{array}$ | 52.484 18.880 18.898 | 3.892 1.404 1.408 | 180 4 2 | $\cdots$ $\cdots$ $\ldots$ |

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours, statistics Canada, Catalogue 72-002. An average labour unit could be interpreted as a fuli-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See rabie 1 for symbois and notes.

# OPERATORS OF BUILDINGS \& DWELLINGS 

$\frac{\operatorname{CANADA}}{1987}$

SMALL BUSHNESS OFFICE

TABLE 1. Selected operating ratios, in percent of sales, 1987
Canada, Dperators of Buildings and Owellings (SIC 751)

## Symbols

zero or no observations

- too small too be expressed
... not applicable
$x$ confidential

## Footnotes

(1) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of all businesses in the sample }} \times 100$ for each quartile.
(3) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100$ for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therafore these ratios are calculated individually and the total will not necessarily equal $100 \%$.

## Notes

Data are shown by quartiles when at least 13 of the sampled businesses report the spacific itam.
Records ware ranked in ascending order according to sales size. Each quartile (i.e. bottom 25\%, lower midde 25\%, etc.l represents one quarter of the total numbar of businesses. Within each quartile, the average ratio is presented. for comparison purposes, the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriata salas range that is displayed on the two lines entitled "Low sales value" and "High sales value".
(2) The selected range will indicate the proper quartile, i.a. the bottom $25 \%$, the lower middle $25 \%$, the upper middle $25 \%$ or the top 25\%.
(3) Data pertaining to the selected sales siza range will be in that quartile.

Standard Industrial Classification Definition (SIC 1980):
SIC 7510 - Operators of Buildings and Dwellings
Businesses primarily,engaged in operating, or in owning and operating buildings and dwellings.

Footnotes
(1) These estimates are besed on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of all businesses in the sample }} \times 100$ for each quartile,

(3) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100$ for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total wil! not necessarily equal 100\%.

Notes
Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile li.e. bottom 25\%, lower middle 25\%, ete.l represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. for comparison purposes, the high and low values of sales are shown.

How to use the tables
(11 Locate the appropriate sales range that is displayed on the two lines entitled "Low sales value" and "High sales value".
(2) The selected range will indicate the proper quartile. i.e. the bottom $25 \%$, the lower middle $25 \%$, the upper middle $25 \%$ or the top $25 \%$.
$(31$ Data pertaining to the selected salas size range will be in that quartile.

## Standard Industrial Classification Definition (SIC 1980):

SIC 7512 - Operators of Non-Residential Buildings
8usinesses primarily engaged in operating, or owning and operating non-residential buildings, This industry includes arena operating, conference/convention centre operating, leasing non-residential buildings. mesting hall operating. office buliding rental, operating non-residential buildings real estate. shopping centre operating, stadium operating and theatre building operating

## Symbols

- zero or no observations
-- too small too be expressed
... not applicable
$\times$ confidential

## Footnotes

(1) These astimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$
(2) Value in each celi $=$ Total weighted expenditure on a given item
$\qquad$
Total weighted sales of all businesses in the sample
(3) Value in each cell

Total weighted expenditure on a given item

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal $100 \%$.

## Notes

Data are shown by auartiles when at least 13 of the samplad businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile (i.e. bottom 25\%, lower midde 25\%, etc.) represents one quarter of the total number of businesses. Hithin each quartile, the average ratio is presented. For comparison purposes, the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range thet is displayed on the two lines entitled "Low sales value" and "High sales value".
(2) The selected range will indicate the proper quartile, i.e. the bottom $25 \%$, the lower middle $25 \%$, the upper midde $25 \%$ or the top $25 \%$.
13) Data pertaining to the selected sales size range will be in that quartile.

Standard Industrial Classification Definition (SIC 1980):
SIC 3030 - Drnamental and Architectural Metal Products Industries
Businesses primarily engaged in manufacturing metal windows and doors; prefabricated, portable metal buildings; and other ornamental and architectural metal products.

SOURCE: Small 8usiness and Special Surveys Division. Statistics Canada.

(1) The ratios represent the average of ratios for each business in the group and cannot be calculated from the flgures shown in Table 2 .
(2) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.

See Table 1 for symbols and notes.

Definitions:

1. Liquidity ratio:

Current $=$ current assets / current liabilities.
2. Leverage ratios:
a) Debt/equity = total liabilities / equity.
b) Debt tatio = otal liabilities/total assets.
c) Interest coverage $=$ net profit + interest expense / interest expense.

| 1987 |  |  |  |  |  |
| Total | 1.161 | 438.758 | 16,972 | 135 | ... |
| $\begin{aligned} & \text { less than } 20 \\ & 20-99 \\ & 100-499 \\ & 500 \text { and over } \end{aligned}$ | 878 227 46 10 | 114.533 213.894 76.059 34.272 | 4.420 8.181 3.008 1.363 | 105 24 6 | $\ldots$ $\ldots$ $\ldots$ |

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours. Statistics Canada. Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
121 Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer feporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.
See Table 1 for symbols and notes.

SOURCE: Small 8usiness and Special Surveys Division, Statistics Canada.

## Symbols

- zero or no observations
-- too small too be expressed
... not applicable
$x$ confidential

## Footnotes

11) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of all businesses in the sample }} \times 100$ for each quartile.
(3) Value in each cell $=$
$\frac{\text { Total waighted expenditure on a given item }}{\text { Total weightad sales of businesses reporting this } i t e m \text { of expenditure }} \times 100$ for each quartile.

This portion of the table pertains only to the businesses reporting the specific expensa item. Therefore these ratios are calculated individually and the total will not necessarily equal $100 \%$.

## Notes

Data ere shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile (i.e. botom 25\%. lower midde 25\%, etc.l represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. for comparison purposes, the high and low values of sales are shown.

How to use the tables
(11. Locate the appropriate salas range that is displayed on the two lines entitled "Low sales value" and "High sales value".
(2) The selected range will indicate tha proper quartile, i.e. the botom $25 \%$, the lower midde $25 \%$, the upper middle $25 \%$ or the top $25 \%$.
(3) Data pertaining to the selected sales size range will be in that quartile.

## Standard Industrial Classification Definition (SIC 1980):

SIC 4292 - Drnanental and Miscellaneous fabricated Metal Installers
Businesses primarily engaged in the installation and repair of standard or custom fabricated sheet metal components fexcept for roofing and duct workl. decorative iron or steel work, ornamental or architectural metal work. Businesses engaged in the installation of architectural metal work, installation of metal balconies. installation of metal decks and grates. installation of decorative iron and steel work. installation of metal fire escapes and stairways. installation of metal hollow work. installation of metal partitions loffice. washroom, etc.l. installation of ornamental metal work, installation of sheet metal components lexcept roofing and duct. workl, metal stairs installation and the installation of metal store front frames are included in this industry.

(1) The ratios represent the average of ratios for ach business in the group and cannot be calculated from the figures shown in table 2 .
(2) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.

See Table 1 for symbols and notes.

Definitions:

1. Liquidity ratio:

Current = current assets / current liaoilities.
2. Leverage ratios:
al Debt/equity $=$ total liabilities $/$ equity.
bl Debt ratio = total liabilities/total assets.
c) Interest coverage $=$ net profit + interest expense / interest expense.

TABLE 4. Statement of changes in financial position for incorporated businesses only, 1987
Canada, Ornamental and Miscellaneous Fabricated Metal Installation (SIC 4292)

(1) These estimates are based on a sample of incorporated businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$. Sample count includes only those businesses reporiting a statement of changes.
See Table 1 for symbols and notes.
TABLE 5. Employment changes by size of business, 1984-1987 based on SIC elassification in 1987 Canada, Ornamental and Miscellaneous Fabricated Metal Installation (SIC 4292)

| 8usiness size expressed in average labour units(1) | Number of businesses | $\begin{array}{r} \text { Total payroll } \\ (\$ 000 ' s) \end{array}$ | Average labour units(1) | Changes in number of businesses with paid employees |  |

| 1987 |  |  |  |  | . . |
| Total | 198 | 21,917 | 785 | 32 | $\cdots$ |
| $\begin{aligned} & \text { less than } 20 \\ & 20-99 \\ & 100-499 \\ & 500 \text { and over } \end{aligned}$ | 192 5 1 - | $15,320$ | $\begin{array}{r}556 \\ 177 \\ 52 \\ \hline\end{array}$ | 31 | $\because$ $\because$ $\square$ |

(11 Avarage labour units are calculated by dividing total payroll by the average annual wege and salary rate as reported in the
Survey of Employment Payroll and Hours, statistics Canada, Catalogue 72-002, An average abour unit could be interpreted as a
full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least
500 employees in Canada as a whole but less'than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year
(3) Refers to businessas reporting no payrall deductions in the following year
"Newly reporting" and "no longer revorting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes.

| Leverage ratios <br> Debt/equity ratio (times) <br> Interest coverage ratio (times) <br> Debt ratio (times) | 2.0 2.0 0.7 | 4.5 0.8 | 1.7 1.8 0.6 | 2.0 0.9 0.7 | 1.7 3.0 0.6 |

(11) The ratios represent the average of ratios for each business in the group and eannot be calculated fram the figures shown in Table 2 .
(2) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.

See rable ifor symbols and notes.

Definitions:

1. Liquidity ratio:

Current = current assets / eurrent liabilities.
2. Leverage ratics:
a) Debt/equity $=$ zatal |iabilities / equity.
b) Debt ratio = total liabilities/total assets.
c) Interest coverage = net profit + interest expense / interest expense.

See table 1 for symbols and notes

## OTHER SITE WORK

## CANADA

1987

SMALL BUSNESS OFFICE

TABLE 1. Selected operating ratios, in percent of sales. 1987
Canada, Other Site Work (SIC 4219)

## Symbols

- zero or no observations
-- too small too be expressed
$\ldots$ not applicable
$\times$ confidential

## Footnotes

(1) These astimatas are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Value in sach call
$=\frac{\text { Total weighted expenditure on a given item }}{\text { rotal weighted sales of all businesses in the sample }} \times 100$ for each quartile.
(3) Value in each call $=\frac{\text { Total weighted expenditure on a given item. }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100$ for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal $100 \%$.

## Notes

Data are shown by quartiles when at least 13 of the samplad businesses report the specific item.
Records were ranked in ascending order according to sales.size. Each quartile (i,e. bottom $25 \%$, lower midde 25\%. etc.) represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. For comparison purposes, the high and low values of sales are shown.

How to use the tables
11 Locate the appropriate sales range that is displayed on the two lines entitled "Low sales value" and "High sales value".
121 The selected range will indicate the proper quartiie, i.e. the bottom 25\%, the lower midde $25 \%$, the upper middle $25 \%$ or the top $25 \%$.
(3) Data pertaining to the selected sales size range will be in that quartile.

Standard Industrial Classification Definition (SIC 1980):
SIC 4219 - Other Site Work
Businesses primarily engaged in site work not elsewhere classified. Included in this industry are businesses primarily engaged in landscape contracting who purchase nursery stock. These businesses include landscape contractors and riprapping installation.

only those businesses reporting a statement of changes.
See Table 1 for symbols and notes.

TABLE 5. Employment changes by size of business, 1984-1987 based on SIC classification in 1987 Canada, Other Site Work (SIC 4219)

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours. Statistics Canada, Catalogue 72-002. An average labour unit could be interpreted as a full-time employes. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers 10 ousinesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See table 1 for symbols and notes.

## Footnotes

(1) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Value in each cell $=$ Total weighted expenditure on a given item Total weighted sales of all businesses in the sample $\times 100$ for each quartile.
(3) Value in each cell= Total weighted expenditure on a given item
Total weighted sales of businesses reporting this iten of expenditure $\times 100$ for each quartile.
This portion of the table pertains only to the businesses reporting the specific expense item. therefore these ratios are calculated individually and the total will not necessarily equal $100 \%$.

Notes
Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sates size. Each quartile (i.e. bottom 25\%. lower middle 25\%, etc.) represents one quarter of the total number of businesses. Hithin each quartile, the average ratio is presented. For comparison purposes, the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range that is displayed on the two lines entitied Mlow sales value" and "High sales value".
(2) The selected range will indicate the proper quartile, i.e. the bottom $25 \%$, the lower middle $25 \%$, the upper middie $25 \%$ or the top $25 \%$.
(3) Data pertaining to the selected sates size range will be in that quartile.

Standard Industrial Classlfication Definltion (SIC 1980):
SIC 6352 - Paint and Body Repairs
gusinesses primarily engaged in repairing and/or repainting motor vehicle bodies. fenders and doors. Businesses in this industry may be secondarily engaged ín mechanical repairs. Motor vehicie body reoairs, motor vehicle collision repairs. motor vehicle frame straightening and the painting of motor vehicles are businesses also included in this industry.

TABLE 5．Employment changes by size of business，1984－1987 based on SIC ciassification in 1987
Canada，Paint \＆Body Repalr Shops（SIC 6352）

| Business size expressed in average labour units（1） | Number of businesses | $\begin{array}{r} \text { Total payroll } \\ \left(\$ 000^{\prime} \text { s }\right) \end{array}$ | Average labour units（1） | Changes in number of businesses with paid employees |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | $\begin{array}{r} \text { Newly } \\ \text { reporting }\langle 2\rangle \end{array}$ | No longer reporting（3） |
| 1984 |  |  |  |  |  |
| Total | 5.751 | 346，206 | 20.859 | 1.068 | 538 |
| $\begin{aligned} & \text { less than } 20 \\ & 20-99 \\ & 100-499 \\ & 500 \text { and over } \end{aligned}$ | $\begin{array}{r} 5,629 \\ 119 \\ 3 \\ \hline \end{array}$ | $\begin{array}{r} 284,073 \\ 55,255 \\ 6.878 \end{array}$ | $\begin{array}{r} 17.197 \\ 3.265 \\ 397 \end{array}$ | $\begin{array}{r} 1.053 \\ 15 \\ - \\ - \end{array}$ | $\begin{array}{r}533 \\ 5 \\ \hline\end{array}$ |
| 1987 |  |  |  |  |  |
| Total | 5，888 | 456．928 | 24.230 | 887 | ．$\cdot$ |
| $\begin{aligned} & \text { less than } 20 \\ & 20-99 \\ & 100-499 \\ & 500 \text { and over } \end{aligned}$ | $\begin{array}{r}5.733 \\ 152 \\ 3 \\ \hline\end{array}$ | $\begin{array}{r}359.943 \\ 89.304 \\ 7.681 \\ \hline\end{array}$ | $\begin{array}{r}19.177 \\ 4.667 \\ 386 \\ \hline\end{array}$ | $\begin{array}{r}873 \\ 14 \\ \hline\end{array}$ | $\cdots$ $\cdots$ $\cdots$ |

（1）Average labour units are calculated by dividing total payroll by the average annual wege and salary rate as reported in the Survey of Employment，Payroll and Hours．Statistics Canada，Catalogue 72－002．An average labour unit could be interpreted as a full－time employee．Note that the business size groups used are determined at the Canada level．Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group．
12）Refers to businesses reporting no payroli deductions in the previous year．
（3）Refers to businesses reporting no payrall deductions in the following year．
＂Newly reporting＂and＂no longer reporting＂businesses are assumed to have been in acsivity for six months and the information is adjusted accordingly．

See Table 1 for symbols and notes．

Footnotes
(1) These estimates are besed on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Total weighted expenditure on a given item
(3) Value in each cell $=\frac{\text { Total weighted sales of all businesses in the sample expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times$ loo for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal $100 \%$

## Notes

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile di.e. botom 25\%. lower midde 25\%, etc. represents one quarter of the total number of businesses. Within each quartile. the average ratio is presented. for comparison purposes, the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range thet is displayed on the two lines entitled how sales valuen and "High sales value".
12) The selected range will indicate the proper quartile, i.e. the bot tom $25 \%$, the lower middle $25 \%$, the upper midde $25 \%$ or the top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartile.

## Standard Industrial Classification Definition (SIC 1980):

SIC 4275 - Painting and Decorating Contractors
Businesses primarily engaged in painting. paperhanging and decorating in buifdings and painting of heavy lengineering structures.
Included are businesses primarily engaged in paint or paper stripping and parking lot or road surface marking. this industry includes the painting of bridges and structures, interior decorating, paint stripping lexcept furniturel, interior and exterior painting of buildings. paper hanging (interior decoratingl and wallpaper hanging and removal.

| Total | 4,439 | 251.889 | 10,478 | 1,001 | 549 |
| $\begin{aligned} & \text { less than } 20 \\ & 20-99 \\ & 100-499 \\ & 500 \text { and over } \end{aligned}$ | $\begin{array}{r}4.347 \\ 87 \\ 5 \\ \hline\end{array}$ | $\begin{array}{r}182.931 \\ 58.715 \\ 10.243 \\ \hline\end{array}$ | $\begin{array}{r} 7.510 \\ 2.482 \\ 486 \end{array}$ | $\begin{array}{r}991 \\ 8 \\ 2 \\ \hline\end{array}$ | $\begin{array}{r}539 \\ 4 \\ 6 \\ \hline\end{array}$ |
| 1987 |  |  |  |  |  |
| Total | 5,305 | 373.000 | 13.945 | 1.226 | . . |
| less than 20 <br> 20 - 99 <br> $100-499$ <br> 500 and over | $\begin{array}{r}5.175 \\ 114 \\ 16 \\ \hline\end{array}$ | $\begin{array}{r}267.715 \\ 88.637 \\ 16.648 \\ \hline\end{array}$ | $\begin{array}{r}9.862 \\ 3.224 \\ 859 \\ \hline\end{array}$ | $\begin{array}{r}1.207 \\ 18 \\ 1 \\ \hline\end{array}$ | $\cdots$ $\cdots$ $\cdots$ |

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours, Statistics Canada, Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
13) Refers to businesses reporting no payrall deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumad to have been in activity for six months and the information is adjusted accordingly.

See rable 1 for symbols and notes.

## Symbols

- zero or no observations
-- too small too be expressed
... not applicable
$x$ confidantial

## Footnotes

(1) These estimates are based on a sampie of businesses reporting sales between $\$ 25,000$ and $\$ 2.000,000$
2) Value in each call = Total waighted expenditure on a given item
(3) Value in each cell $=\frac{\text { Total weighted sales of all businesses in the sample }}{\text { Total weighted sales of businesses reporting this item of expenditure } \times 100}$ for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal $100 \%$.

## Notes

Data are shown by quartiles when at least 13 of the sampled businesses. report the spacific item.
Records were ranked in ascending order according to sales size. Each quartile (i.e. bottom 25\%, lower middle 25\%, etc.l represents one quarter of the total number of businesses. Hithin each quartile, the average ratio is presented. For comparison purposes. the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range that is displayed on the two lines antitied "low sales value" and "High sales value".
(2) The selected range wili indlcate the proper quartile, i, e. the bottom $25 \%$. the lower middle $25 \%$, the upper middle $25 \%$ or the top 25\%.
(3) Data pertaining to tha selected sales size range will be in that quartile.

## Standard Industrial Classification Definition (SIC ig80):

## SIC 6031 - Pharmacies

Businesses primarily engaged in retail dealing in drugs, pharmaceuticals and patent medicines and drug sundries. Prescribed medicines must be sold but are not necessarily the source of greatest revenue. They may be secondarily engaged in selling other lines such as cosmetics. toiletries, tobacco products, confectionery, stationery, giftware and novelty merchandise. This industry includes prescription drug stores. retail pharmaceuticals, prescription pharmacies and retail prescription medicines.

| Leverage ratios Debt／equity ratio（times） Interest coverage ratio（times） Debt ratio（times） | 1.2 6.7 0.5 | 1.4 5.0 0.6 | 1.1 5.8 0.5 | 1.2 6.5 0.6 | 1.2 7.8 0.5 |

（1）The ratios represent the average of ratios for each business in the group and cannot be calculated from the figures shown in table 2 ．
121 these estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$ ．
See Table 1 for symbols and notes．

Oefinitions：
1．Liquidity ratio：
Current $=$ current assets／current liabilities．

2．Leverage ratios：
al Debt／equity＝total liabilities／equity．
b）Debt ratio＝total liabilities／total assets．
c）Interest．coverage $=$ net profit －interest expense $/$ interest expense．

TABLE 4. Statement of changes in financial position for incorporated businesses only, 1987
Canada, Pharmacies (SIC 6031)

11) These estimates are based on a sample of incorporated businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$. Sample count inciludes only those businesses reporting a statement of changes.
See Table 1 for symbols and notes.

TABLE 5. Employment changes by size of business, 1984-1987 based on SIC ciassification in 1987
Canada, Pharmacies (SIC 6031)

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment. Payroll and Hours. Statistics Canada. Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business.size groups usad are determinad at the Canada level. Thus if a business has at ieast 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
12) Refers to businesses reporting no payroll deductions in the previous year.

131 Refers to businesses reporting no payroll deductions in the following year.
"Newly reperting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes.

SOURCE: Small Business and Special Surveys Division. Statistics Canada.

## footnotes

11) These estimates are based on a sample of businesses reporting sales between $\$ 25.000$ and $\$ 2.000 .000$.
(2) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of all businesses in the sample }} \times 100$ for each quartile.
(3) Value in each cell

Total weighted expenditure on a given item

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal $100 \%$.

## Notes

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile (i.e. bottom 25\%, lower middle 25\%, etc.) represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. For comparison purposes, the high and low values of sales are shown.

## How to use the tables

(1) Locate the appropriate sales range that is displayed on the two lines entlted "Low sales value" and "High sales value"
(2) The selected range will indicate the proper quartile, i.e. the bottom $25 \%$, the lower midde $25 \%$, the upper middle $25 \%$ or the top $25 \%$.
(3) Data partaining to the selected sales size range will be in that quartile.

## Standard Industrial Classification Deflnition (SIC 1980):

SIC 2820 - Platemaking, Typesatting and 8indery lndustry
Businesses primarily engaged in providing specialized services to the printing and publishing trades, advertising agencies or
others; the making of image bearing photographic films. plates and printers' dies of all types; typeseting for the printing trade: making binders or covers: hand or machine bindery work and allied posteprinting, converting or finishing operations. Included are businesses engaged in photogranhic film developing, printing and enlarging.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and sa!ary rate as reported in the Survey of Employment. Payroll and Hours. Statistics Canada. Catalogue 22-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
3) Refers to businesses reporting no payroll deductions in the following year
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes.

SDURCE: Small 8usiness and Special Surveys Division. Statisṭics Canada.

## Footnotes

(1) These estimetes ara besed on a sampla of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of all businesses in the sample }} \times 100$ for each quartile.
(3) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100 \quad$ for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item, Therefore these ratios are calculated individually and the total will not necessarily equal $100 \%$.

## Notes

Data are shown by quartiles when at least 13 of the sampled businesses raport the specific item.
Records were ranked in ascending order according to sales size. Each quartila (i.e. bottom 25\%, lower middle 25\%, etc.) represents one quarter of the total number of businesses. Within each quertile, the average ratio is presented. For comparison purposes. the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate salas range that is displayed on the two lines entitled "Low sales valuer and "High sales value".
(2) The selected range will indicate the proper quartile. i.e. the bottom $25 \%$, the lower midde $25 \%$, the upper middle $25 \%$ or the top $25 \%$.
(3) Data pertaining to the selected sales size range will be in that quartile.

Standard Industrial Classification Definition (SIC 1980):
SIC 4241 - Plumbing Contractors
Businesses primarily engaged in the installation and repair of primary hot and cold water piping systems (i.e. except space heatingl such as: installation of waste and vent drain systems, installation of hot water heaters and plumbing tanks, installation of water meters. installation of piping systems, installation of plumbing fixtures, installation of primary hot water. installation of roof drainage systems lexcept eavestroughingl and installation of sanitary ware.

See Table 1 for symols and notes.

TABLE 3. Financial ratios(1) for incorporated businesses only, 1987
Canada, Plumbing (SIC 4241)

(1) The ratios represent the average of ratios for each business in the group and cannot be calculated from the figures shown in table 2 . (2) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000.000$.

See Table 1 for symbols and notes.

Definitions:

1. Liquidity ratio:

Current = current assets / current liabilities,
2. Leverage ratios:
a) Debt/equity = total liabilities / equity.
b) Debt ratio = total liabilities / total assets.
c) Interest coverage = net profit + interest expense / interest expense.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reportad in the Survey of Employment. Payroll and Hours. Statistics Canada, Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table $\mid$ for symbols and notes.

## Footnotes

(1) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Value in each celt $=\frac{\text { lotal weighted expenditure on a given item }}{\text { Total weighted sales of al! businesses in the sample }} \times 100$ for each quartile.
(3) Value in each call $=\frac{\text { lotal weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times$ loo for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal $100 \%$.

Notes
Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile (i.e. bottom 25\%, lower middle 25\%, etc.l represents one quarter of the totai number of businesses. Within each quartile, the average ratio is presented. for comparison purposes. the high and low values of sales are shown.

How to use the tables
(1) Locate the eppropriate sales range that is displayed on the two lines entited "Low sales value" and "High sales value"
(2) The selected range will indicate the proper quartile, i.e. the bottom $25 \%$, the lowar middle $25 \%$. the upper midde $25 \%$ or the top 25\%.
(3) Data pertaining to the selected sales size pange will be in that.quartile.

## Standard Industrial Ciassification Definition (SIC 1980):

SIC 4841 - postal Service Industry
Businesses primarily engaged in operating a postal service. in the main. this industry contains businesses of the post office. but it also covers businesses . lincluding individuals working on their own accountl primarily engaged in carrying on one or more functions of the postal service on a contract basis. e.g. rural mail cariers or postmasters. These businesses incluce contract mail service, government mail service, post office box service, contract post office operations, government post office operations and rural mail carrier services.

(1) These estimates are based on a sample of incorporated businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$. Sampie count includes only those businesses reporting a statement of changes.
See Table 1 for symbols and notes.

TABLE 5. Employment changes by size of business, 1984-1987 based on SIC classification in 1987
Canada, Postal Service Industry (SIC 4841)

| Business size expressed in |
| :--- | :--- | :--- |
| average labour units(1) |

(1) Average labour units are calculated by dividing total payroll by the avarage annual wage and salary rate as reported in the Survey of Employment. Payroll and Hours, Statistics Canada, Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See table 1 for symbols and notes.

SOURCE: Small Business and Special Surveys Division, Statistics Canada.

Footnotes
(1) Thase estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.

21 Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of all businesses in the sample }} \times 100$ for each quartile.
(3) Value in each cell $=\frac{\text { Total weighted axpenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100$ for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calcuiated individually and the total will not necessarily equal 100\%.

Notes
Data are shown by quartiles when at least 13 of the samplad businesses report the specific item.
Records were ranked in ascending order according to sales siza. Each quartile (i.e. bottom 25\%, lower middle 25\%, etc.) represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. for comparison purposes. the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range that is displayad on the two lines entitled low sales value" and "High sales value".
(2) The selectad range will indicate the proper quartile, i.e. the bottom $25 \%$, the lower middle $25 \%$, the upper middie $25 \%$ or the top $25 \%$.
(3) Data pertaining to the selected soles size range will be in thet quartile.

## Standard Industrisl Classification Definition (SIC 1980):

SIC 9721 - Power Laundries and/or Dry Cleaners
Businesses primarily engaged in operating mechanical laundries and plants which dry clean and/or dye apparel and household fabrics. These businesses include dry cleaners lexcept self-servicel. power laundry services lexcept self-servicel and power laundry and dry cleaning plants.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours. Statistics Canada. Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.

131 Refers to businesses reporting no payroll deductions in the following year
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes.

## Footnotes

(1) These estimates are besed on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Value in each cell $=$ Total weighted expenditure on a given item
Total weighted expenditure on a given item Total weighted sales of all businesses in the sample $\times 100$ for each quartile.
(3) Value in each celt $=$ lotal weighted expenditure on a given item Total weighted sales of businesses reporting this item of expenditure $\times 100$ for each quartile.

This pprtion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal $100 \%$.

## Notes

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked, in ascending order according to sales size. Each quartile (i.e, bottom 25\%. lower middie 25\%. etc.) represents one quarter of the total number of businesses. Within each quartile. the average ratio is presented. For comperison purposes. the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range that is displayed on the two lines entited "Low sales valuel and "High sales value".
(2) The selected range will indicate the proper quartile, i.e. the bottom 25\%, the lower middle $25 \%$, the upper middle $25 \%$ or the top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartile.

Standard Industrial Classification Definit)on (SIC 1980):
SIC 6030 - Prescription Drugs and Patent Medicine Stores
Businesses primarily engaged in retail dealing in prescription drugs and patent or proprietary and herbal medicines. sick room supplies. cosmetics and toiletries.

SOURCE: Small Business and Special Surveys Division, Statistics Canada.

TABLE 2. Balance sheet profile for incorporated businesses only, 1987
Canada, Prescription Drugs \& Patent Medicine Stores (SIC 503)

11 These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
See Table 1 for symbols and notes.

TABLE 3. Financial ratios(1) for incorporated businesses only, 1987
Canada, Prescription Drugs \& Patent Medicine Stores (SIC 603)

| Leverage ratios Debt/equity ratio (times) Interestcoverage, ratio (times) Debt ratio (times) | 1.3 6.3 0.6 | 2.1 2.7 0.7 | 1.1 6.0 0.5 | 1.3 6.2 0.6 | 1.2 7.8 0.5 |

(1) The ratios represent the average of ratios for each business in the group and cannot be calculated from the figures shown in table 2 .
(2) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.

See rabie 1 for symbols and notes.

Dofinitions:

1. Liquidity ratio:

Current $=$ current assets $/$ current liabilities.
2. Leverage ratios:
a) Debt/equity $=$ total liabilities / equity.
b) Debt ratio = total liabilities / total assets.
c) Interest coverage = net profit + interest expense / interest expense.

TABLE 4. Statement of changes in financial position for incorporated businesses only, 1987
Canada, Prescription Orugs \& Patent Medicine Stores (Sic 603)

11) These estimates are based on a sample of incorporated businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$. Sample count includes only those businesses reporting a statement of changes.
See rable 1 for symbols and notes

## ootnotes

111 These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$
(2) Value in each ceil $=\frac{\text { Totai weighted expenditure on a given item }}{\text { Total weighted sales of ali businesses in the sampie }} \times 100$ for each quartile.
(3) Velue in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100 \quad$ for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individualiy and the total will not necessarily equal $100 \%$.

Notes
Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile (i.e. bottom 25\%, iower middle 25\%. etc.) represents one quarter of the total number of businesses. Within each quartile. the average ratio is presented. For comparison purposes. the high and low values of sales are shown.

## How to use the tables

(1) Locate the appropriate sales range that is displayed on the two lines entitied "Low sales value" and "High sales value"
(2) The salectad range will indicate the proper quartile, i.e. the botom 25\%, the lower middie 25\%, the upper middle $25 \%$ or the top 25\%:
(3) Data pertaining to the selected sales size range will be in that quartile.

## Standard Industrial Classification Definition (SIC 1980 )

SIC 2830 - Publishing Industries
Businesses primarily engaged in publishing and which do no printing. The term "publishing" as applied in this industry group includes the publishing of books, other reading matter, maps, guides and the like.

SDURCE: Smal| Business and Special Surveys Division, Statistics Canada.

(1) These estimates are based on a sample of businessas reporting sales between $\$ 25,000$ and $\$ 2,000,000$.

See iable 1 for symbols and notes.

TABLE 3. Financial ratios(1) for incorporated businesses only, 1987
Canada, Publishing Industries (SIC 283)

|  | Total(2) |  |
| :--- | :--- | :--- | :--- | :--- | :--- |

(1) The ratios represent the average of ratios for each business in the group and cannot be calculated from the figures shown in table 2 .
(2) These estimates are based on a sample of businesses reporting sales between $\$ 25.000$ and $\$ 2,000,000$.

See Table 1 for symbols and notes.

## Definitions:

1. Liquidity ratio:

Current = current assets / current liabilities.
2. Leverage ratios:
al Debt/equity = total liabilities / equity.
b) Debt ratio $=$ total liabilities / total assets.
c) interest coverage = net profit + interest expense / interest expense.

(1) These estimates are based on a sample of incorporated businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$. Sample count inciudes only those businesses reporting a statement of changes
See Table 1 for symbols and notes.

TABLE 5. Employment changes by size of business, 1984-1987 based on SIC classification in 1987 Canada, Publishing Industries (SIC 283)

| Business size expressed in average labour units(1) | Number of businesses | $\begin{array}{r} \text { Total payroli } \\ \left(\$ 000^{\prime} \mathrm{s}\right) \end{array}$ | Average labour units(1) | Changes in number of businesses with paid employees |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | $\begin{array}{r} \text { Newly } \\ \text { reporting(2) } \end{array}$ | No longer reporting(3) |
| 1984 |  |  |  |  |  |
| Total | 1,395 | 455,809 | 23,131 | 246 | 147 |
| $\begin{aligned} & \text { less than } 20 \\ & 20-99 \\ & 100-499 \\ & 500 \text { and over } \end{aligned}$ | 1.131 157 91 16 | $\begin{array}{r} 75.464 \\ 80.297 \\ 110.749 \\ 189.299 \end{array}$ | $\begin{aligned} & 3.924 \\ & 4.118 \\ & 5.525 \\ & 9.564 \end{aligned}$ | $\begin{array}{r}224 \\ 15 \\ 7 \\ \hline\end{array}$ | 128 14 4 1 |
| 1987 |  |  |  |  |  |
| Total | 1,583 | 644.602 | 27.166 | 273 | . . |
| $\begin{aligned} & \text { less than } 20 \\ & 20-99 \\ & 100-499 \\ & 500 \text { and over } \end{aligned}$ | 1.254 210 97 22 | $\begin{array}{r} 96,803 \\ 121,119 \\ 133,726 \\ 292,954 \end{array}$ | $\begin{array}{r} 4.435 \\ 5.551 \\ 5.873 \\ 11.307 \end{array}$ | 248 20 4 1 | $\ldots$ $\cdots$ $\ldots$ |

(1) Avarage labour units are calculated by dividing totai payroll by the averaga annuai wage and salary rate as reported in the Survey of Employment, Payroll and Hours. Statistics Canada. Catalogue 72-002. An average labour unit couid be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada levei. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year
(3) Refers to businesses reporting no payroll deductions in the following year.
"Newiy reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes.

## Symbols

- zero or no observations
-- too small too be expressed
... not applicable
$x$ confidential

## Footnotes

11) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Vaiue in each celi = Total weighted expenditure on a given item Total weighted sales of all businesses in the sample $x$ for each quartile. Total weighted expenditure on a given item
(3) Value in each cell $=\frac{\text { fotal weighted sales of businesses reporting this item of expenditure }}{} \times 100$ for $\quad$ quartile.

This portion of the tabie pertains only to the businesses reporing the specific expense item. Therefore these ratios are calculated individuelly and the total will not necessarily equal $100 \%$.

## Notes

Data are shown by quartiles when at least 13 of the sampied businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile li.e. bottom 25\%. lower middie 25\%, etc.l represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. For comparison purposes. the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range that is displayed on the two lines entitled "Low sales value" and "High sales value".
(2) The selected range will indicate the proper quartile, i.e. the bottom $25 \%$, the lower middle $25 \%$, the upper midde $25 \%$ or the top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartile.

## Standard Industrial Classification Definition (SIC 1980):

SIC 4013 - Residential Renovation Contractors
Businesses primarily engaged in residential additions. major improvements and repairs, renovation, rehabiiitation. retro-fitting and conversions involving more than one trade such as: general contractors for residential additions, general contractors for home improvements and repairs, general contractors for house alterations and general contractors for residential renovations.

SOURCE: Small Business and Special Surveys Division. Statistics Canada.

## Footnotes

(1) These estimates are based on a sample of businesses reporting sales betwaen $\$ 25,000$ and $\$ 2,000,000$.

1 Value in each cell $=$ Total weighted expenditure on a given item
(3) Value in each cell $=\frac{\text { Total weighted expenditure on a given iten }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100 \quad$ for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal 100\%.

Notes
Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending ordar according to sales size. Each quartile (i.e. bottom 25\%, lower middle 25\%, etc.l reoresents one quarter of the total number of businesses. Hithin each quartile, the average ratio is presented. For comparison purposes, the high and low values of sales are shown

How to use the tables
(11 Locate the appropriate sales range that is displayed on the two lines entited ${ }^{\text {L }}$ Low sales valuen and nigh sales value"
12 The selected range will indicate the proper quartile, i.e. the botom $25 \%$, the lower middle $25 \%$. the upper middle $25 \%$ or the top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartile.

## Standard Industrial Classification 0efinition (SIC 1980):

SIC 2510 - Sawmill, Planing Mill and Shingie Mill Products Industries
Businesses primarily engaged in manufacturing lumber. both rough and dressed. shingles and other sawmill or other planing mill products.

11 These estimates are based on a sample of incorporated businesses reporting sales between $\$ 25,000$ and $\$ 2.000,000$ ．Sample count includes only those businesses reporting a statemant of changes．
See Table 1 for symbols and notes．

TABLE 5．Employment changes by size of business，1984－1987 based on SIC classifieation in f987
Canada，Sawmill，Planning Mill \＆Shingle Mill Products industries（SiC 251）

（1）Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment，Payroll and Hours，Statistics Canada．Catalogue 72－002．An average labour unit could be interpreted as a full－time employee．Note that the business size groups used are determined at the Canada level．Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group．
（2）Refers to businesses reporting no payroll deductions in the previous year．
（3）Refers to businesses reporting no payroll deductions in the following year．
＂Newly reporting＂and＂no longer reporting＂businesses are assumed to have been in activity for six months and the information is adjusted accordingly．
See Table 1 for symbols and notes．

SMALL BUSNNESS OFFICE

TABLE 1. Selected operating ratios, in percent of sales, 1987
Canada, School Bus Operations Industry (SIC 4573)

Symbols

- zero or no obsarvations
-- too small too be expressed
... not applicable
$x$ confidential
Footnotes
(1) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Value in each cell $=\frac{\text { Total weighted expenditura on a given item }}{\text { Total weighted sales of all businesses in the sample }} \times 100$ for each quartile.
(3) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of bisinesses reporting this item of expenditure }} \times 100 \quad$ for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item, Therefore these ratios are calculated individually and the total will not necessarily equal 100\%.

## Notes

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile (i.e. bottom 25\%. lower middle 25\%. etc.) represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. for comparison purposes, the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range that is displayed on the two lines entited "low sales value" and "High sales value".
(2) The selected range will indicate the proper quartile, i.e. the bottom $25 \%$. the lower midde $25 \%$, the upper middle $25 \%$ or the top 25\%
(3) Data pertaining to the selected sales size range will be in that quartile.

Standard Industrial Classification Definition (SIC 1980):
SIC 4573 - School Bus Operations Industry
Businesses primarily engaged in operating buses and other motor vehicles to transport pupils to and from school such as school bus services.

(2) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.

See Table 1 for symbols and notes.

Defir: :ions:

1. Liquidity ratio:

Current = current assets / current liabilities.
2. Leverage ratios;
a) Debt/equity $=$ total liabilities / equity.
b) Dabt ratio = total liabilities / total assets
c) Interest coverage = net profit - interest expense / interest expense.

(11) These estimates are based on a sample of incorporated businesses reporting sales between $\$ 25,000$ and $\$ 2.000,000$. Sample count includes only those bus inesses reporting:a statement of changes.
See Table 1 for symbols and notes.

TABLE 5. Employment changes by size of business, 1984-1987 based on SIC classification in 1987
Canada, School Bus Operations industry (Sic 4573)

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as raported in the Survey of Employment, Payroll and Hours. Statistics Canada, Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Reiers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See rable 1 for symbols and notes.

SDURCE: Small Business and Special Surveys Division. Statistics Canada.

## Symbols

- zero or no observations
-- too small too be expressed
... not applicable
$\times$ confidential

## Footnotes

(1) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
2) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { lotal weighted sales of all businesses in the sample }} \times 100$ for each quartile.
(3) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { rotal weighted sales of businesses reporting this item of expenditure }} \times 100$ for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individualiy and the total will not necessarily equal $100 \%$.

## Notes

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile li.e. bottom 25\%, lower middle 25\%. etc.l represents one quarter of the total number of businesses. Within each quartlle, the average ratio is presented. For comparison purposes. the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range that is displayed on the two lines entitled "Low sales value" and "High sales value"
(2) The selected range will indicate the proper quartile, i.e. the bottom $25 \%$, the lower middle $25 \%$. the upper middle $25 \%$ or the top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartile.

Standard Industrial Ciassification Definition (SIC 1980):
SIC 6591 - Second-Hand Merchandise Stores n.e.c
Businesses primarily engaged in retail dealing in used merchandise, not elsewhere classified. Pawnshops are included in this industry. This industry includes retail antiques, retail used appliances. retail used books, retail used clothing, retail used crockery, retail used furniture, retail used glassware and china, retail used jewellery, retail used musical instruments, pawnshops and retail second-. hand merchandise.

Footnotes
(1) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Value in aach cell $=\frac{\text { Total weighted expenditure on a givan item }}{\text { Total waighted sales of all businesses in the sample }} \times 100$ for each quartile.
(3) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times$ for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are ealculated individually and the total will not necessarily equal $100 \%$.

## Notes

Data are shown by quartiles when at lass 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile (i.e. bottom 25\%, lower middle 25\%, etc.) represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. for comparison purposes, the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate salas range that is displayed on the two lines entitad "Low sales valuen and "High sales value".
(2) The selected range will indicete the proper quartile, i.e. the bot tom $25 \%$, the lower midde $25 \%$, the upper middle $25 \%$ or the top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartile

## Standard Industrial Classification Definition (SIC 1980):

SIC 9723 - Self-Serve Laundries and/or Dry Cleaners
Businesses primarily engaged in providing coin-operated automatic laundry and/or dry cleaning facilities for the use of the public. included in this industry are businesses engaged in coin-operated dry cleaners, coin-operated laundries, self-serve dry cleaners and self-serve laundries.

| ```Leverage ratios Debt/equity ratio (times) Interest coverage ratio (times) Oebt ratio (times)``` | 5.3 1.9 0.8 | -- | -- | $\cdots$ | -- |

(1) The ratios represent the average of ratios for each business in the group and cannot be calculated from the figures shown in table 2 .
(2) These estimates are based on a sample of businesses reporting sales between $\$ 25.000$ and $\$ 2,000.000$.

See Table 1 for symbols and notes.

Definitions:

1. Liquidity ratio:

Current = current assets / current liabilities.
2. Leverage ratios:
a) Debt/equity = total liabilities / equity.
b) Debtratio = total liabilities / total assets.
c) Interest coverage = net profit - interest expense / interest expense.

| Total ! | 4,380 | 407.545 | 36,775 | 710 | 420 |
| $\begin{aligned} & \text { less than } 20 \\ & 20-99 \\ & 100-499 \\ & 500 \text { and over } \end{aligned}$ | 4,064 246 50 20 | $\begin{array}{r} 148,980 \\ 99,478 \\ 77,689 \\ 81,398 \end{array}$ | $\begin{array}{r} 13.471 \\ 9.0017 \\ 6,887 \\ 7,400 \end{array}$ | $\begin{array}{r} 674 \\ 22 \\ 10 \\ 4 \end{array}$ | $\begin{array}{r} 411 \\ 8 \\ 1 \\ \hline \end{array}$ |
|  |  |  |  |  |  |
| 1987 |  |  |  |  |  |
| Total | 4,802 | 521.124 | 38,533 | 894 | $\cdots$ |
| $\begin{aligned} & \text { less than } 20 \\ & 20-99 \\ & 100-499 \\ & 500 \text { and over } \end{aligned}$ | 4,482 254 51 15 | $\begin{aligned} & 188,597 \\ & 125,794 \\ & 106.535 \\ & 100.198 \end{aligned}$ | 14,154 9.319 7.886 7.174 | $\begin{array}{r}864 \\ 25 \\ 5 \\ \hline\end{array}$ | $\ldots$ |

(1) Average labour units are calculated by dividing total payroll by the everage annual wage and salary rate as reported in the Survey of Employment. Payroll and Hoirs, Statistics Canada. Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at leas 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.

131 Refers to businesses reporting no payroll deductions in the following year.
"Newiy reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes.

## Symbols

- zero or no observations
-- too small too be expressed
... not applicable
$\times$ confidential
Footnotes
(1) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { lotal weighted sales of all businesses in the sample }} \times 100$ for each quartile
(3) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100 \quad$ for each quartile.

This portion of the table pertains oniy to the businesses reporting the specific expense item. Therefore these ratios are calculated individualiy and the total will not necessarily equal $100 \%$.

## Notes

Data are shown by quartiies when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile li.e. bottom 25\%, lower middle $25 \%$, etc.l represents one quarter of the totai number of businesses. Within each quartile, the average ratio is presented. For comparison purposes, the high and low values of sales are shown.

How to use the tables
11 Locete the appropriate sales range that is displayed on the two lines entitied "Low sales valuen and "High sales valuen.
(2) The selected range wili indicate the proper quartile. i.e. the botom $25 \%$, the iower middle $25 \%$, the upper middie $25 \%$ or the top $25 \%$.
(3) Data pertaining to the selected sales size range will be in that quartife.

Standard Industrial Classification Definition (SIC 1980):
SIC 0910 - Service Industries Incidental to Crude Petroleum and Natural Gas
Businesses primariiy engaged in providing contract driliing and other services to petroieum and natural gas industries.

(1) The ratios represent the average of ratios for each business in the group and cannot be calculated from the figures shown in table 2 . (2) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.

See Table 1 for symbols and notes.

Definitions:

1. Liquidity ratio:

Current = current assets / current liabilities.
2. Leverage ratios:
al Debt/equity $=$ total liabilities / equity.
b) Debtratio = total liabilities / total assets.
cl Interest coverage $=$ net profit + interest expense / interest expense.

(1) These estimates are based on a sample of incorporated businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$. Sample count includes only those businessas reporting a statement of changes.
See Tabls 1 for symbols and notes.

TABLE 5. Employment changes by size of business, 1984-1987 based on SIC classification in t987
Canada, Service Industries Incidental to Crude Petroleum and Natural Gas (SIC 091)

| Business size expressed in average labour units(1) | Number of businesses | $\begin{array}{r} \text { Total payroll } \\ \left(\$ 000^{\prime} s\right) \end{array}$ | Average labour units(1) | Changes in number of businesses with paid employees |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | $\begin{array}{r} \text { Newly } \\ \text { reporting(2) } \end{array}$ | No longer reporting(3) |
| 1984 |  |  |  |  |  |
| Total | 1.429 | 1,012,389 | 34,474 | 354. | 249 |
| $\begin{aligned} & \text { less than } 20 \\ & 20-99 \\ & 100-499 \\ & 500 \text { and over } \end{aligned}$ | 1.105 164 104 56 | $\begin{aligned} & 106,508 \\ & 161,832 \\ & 254,589 \\ & 489,460 \end{aligned}$ | $\begin{array}{r} 3,063 \\ 5,227 \\ 8,303 \\ 17.881 \end{array}$ | $\begin{array}{r} 305 \\ 20 \\ 24 \\ 5 \end{array}$ | 229 10 8 2 |
| 1987 |  |  |  |  |  |
| Total | 1,681 | 939,363 | 31.381 | 296 | . $\cdot$ |
| $\begin{aligned} & \text { less than } 20 \\ & 20-99 \\ & 100-499 \\ & 500 \text { and over } \end{aligned}$ | 1.383 166 76 56 | $\begin{aligned} & 124,686 \\ & 162,075 \\ & 177,067 \\ & 475,535 \end{aligned}$ | $\begin{array}{r} 4.016 \\ 5.112 \\ 5.477 \\ 16.776 \end{array}$ | 259 31 3 3 | $\cdots$ $\cdots$ $\cdots$ |

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as.reported in the

Survey of Employment, Payroll and Hours, Statistics Canada. Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
12) Refers to businesses reporting no payroll deductions in the previous year.
13) Refers to businesses reporting no payroll deductions in the following year.
"Newiy reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See fable 1 for symbols and notes.

## Symbals

- zero or no observations
.- too small too be expressed
... not applicable
$x$ confidential
Foatnotes
(1) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Value in eech cell = Total weighted expenditure on a given item Total weighted sales of all businesses in the sample $\times 100$ for each quartile.
(3) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100$ for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal $100 \%$.

## Notes

Data are shown by quartiles when at least 13 of the sampled businesses. report the specific item.
Records were ranked in ascending order according to sales size. Each quertile (i.e. bottom 25\%, lower middle 25\%, etc.) represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. For comparison purposes. the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range thet is displayed on the two lines entitled "Low sales value" and "High sales value".
(2) The selected range will indicate the proper quartile, i.e. the bottom $25 \%$, the lower midde $25 \%$, the upper midde $25 \%$ or the top $25 \%$.
(3) Data pertaining to the selacted sales size range will be in that quartile.

Standard Industrial Classification Definition (SIC 1980):
SIC 0920 - Service Industries Incidental to Mining
8usinesses primarily engaged in contract drilling and other services incidental to mining establishments.

See Table 1 for symbols and notes.

TABLE 5. Employment changes by size of business, 1984-1987 based on SIC classification in 1987
Canada, Services Industries Incidental to Mining (SIC 092)

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours, Statistics Canada, Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year.
"Newty reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes.

## SERVICES TO BUILDINGS \& DWELLINGS

## SMALL BUSINESS OFFICE

TABLE 1. Selected operating ratios, in percent of sales, 1987
Canada, Services to Buildings and Dwellings (Sic 995)

## Symbols

zaro or no obsarvations
-- too small too be expressad
... not applicablo
$\times$ confidential

## Footnotes

(1) These estimates are based on a semple of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Value in each call $=\frac{\text { Total waightad expenditura on a givan item }}{\text { Total weighted sales of all businessas in the sample }} \times 100$ for each quartile.
13) Value in each cell $=\frac{\text { Total weighted expenditure on a given } i t e m}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100$ for each quartile.

This portion of the table partains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal $100 \%$.

## Notes

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile (i.e. bottom 25\%. lower middle 25\%, etc.) represents one quarter of the total number of businesses. Within eech quartile, the average ratio is presented. for comparison purposes, the high and low values of sales are shown.
How to use the tables
if Locate the appropriate sales range thet is displayed on the two lines entitied "low sales value" and "High sales value"
(2) The selected range will indicate the proper quartile, i.e. the botom $25 \%$, the lower midde $25 \%$, the upper middle $25 \%$ or the top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartile.

## Standard Industrial Classifieation Definition (SIC 1980):

SIC 9950 - Services to Buildings and Dweilings
Businesses primarily engaged in disinfecting and exterminating, window cleaning, janitorial and other services to buildings and dwellings.

| $\begin{aligned} & \text { less than } 20 \\ & 20-99 \\ & 100-499 \\ & 500 \text { and over } \end{aligned}$ | 8.851 454 111 49 | 288.821 191.595 170.935 192.160 | 22.141 15.600 13.860 16.247 | 2.157 37 12 3 | $\cdots$ $\cdots$ $\cdots$ |

(1) Average iabour units are calcuiated by dividing total payroli by the average annual wage and salary rate as reported in the Survey of Employment. Payroll and Hours, Statistics Canada, Catalogue 72-002. An average labour unit could be interpreted as a fuil-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shawn in the 500 and over graup.
(2) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes:

## Footnotes

(1) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { lotal weighted sales of all businesses in the sample }} \times 100$ for each quartile.
(3) Value in each cell =

Total weighted expenditure on a given item
lotal weighted sales of businesses reporting this item of expenditure $x$ for each quartile.
This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal 100\%.

Notes
Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quar tile (i.e, bottom 25\%, lower middle 25\%, etc.l rapresents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. For comparison purposes, the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range that is displayed on the two lines entitled "tow sales value" and "High sales valuen.
(2) The selected range will indicate the proper quartile, i.e. the bottom 25\%, the lower middle $25 \%$. the upper middle $25 \%$ or the top $25 \%$.
(3) Data pertaining to the selected sales size range will be in that quartile.

## Standard Industrial Classification Definition (SIC 1980):

SIC 4232-Siding Contractors
Businesses primarily angaged in the installation and repair of siding, cladding, metal doors amd window frames and related work. Included are businesses dealing in the installation of metal awnings. canopies and shutters; installation of cladding lexcluding glassl: installation of curtain walls; installation of metal doors and window frames: installation of metal, hardboard and vinyl exterior siding; installation of metal and plastic fascia and soffit and the installation of aluminum, steel. asbestos. cement. plastic and hardboard siding.

(2) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.

See Table $\mid$ for symbols and notes.

Definitions:

1. Liquidity ratio:

Current = current assets / current liabilities.
2. Leverage ratios:

[^5]TABLE 4. Statement of changes in financial position for incorporated businesses only, 1987
Canada, Siding Work (SIC 4232)

(1) These estimetes are based on a sample of incorporated businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$. Sample count includes only those businesses reporting a statement of changes.
See Table 1 for symbols and notes.

TABLE 5. Employment ehanges by size of business, 1984-1987 based on SIC ciassification in i987
Canada, Siding Work (SIC 4232)

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours. Statistics Canada, Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer reparting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes.

| Total | 25,718 | 2.003.006 | 76,444 | 5.948 | $\ldots$ |
| $\begin{aligned} & \text { less than } 20 \\ & 20-99 \\ & 100-499 \\ & 500 \text { and over } \end{aligned}$ | $\begin{array}{r}25.181 \\ 479 \\ 58 \\ \hline\end{array}$ | 1.415 .770 393.823 193.413 | $\begin{array}{r}54.198 \\ 15.030 \\ 7.216 \\ \hline\end{array}$ | $\begin{array}{r}5.859 \\ 76 \\ 13 \\ \hline\end{array}$ | $\cdots$ $\cdots$ $\cdots$ |

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the

Survey of Employment. Payroll and Hours. Statistics Canada. Catalogue 72-002. An average labour unit could be interpreted as a
fuli-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least
500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes.

## Footnotes

(1) These estimates are based on a sampla of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$
(2) Value in each call $=$ Total weighted expenditure on a given item
(3) Value in each cell $=\frac{\text { Total weighted sales of all businesses in the sample }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100 \quad$ for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calalat individually and the total will not necessarily equal $100 \%$.

## Notes

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile (i.e. bottom 25\%, lower middle 25\%. etc.) represents one quarter of the total number of businesses. Within each quartile, the averege ratio is presented. for comparison purposes, the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range that is displayed on the two lines entitled "Low sales value" and "High sales value".
(2) The selected range will indicate the proper quartile, i.a, the bottom 25\%, the lower middle $25 \%$, the upper midde $25 \%$ or the top $25 \%$.
(3) Data pertaining to the selected sales size range will be in that quartila.

Standard Industrial Classification Definition (SIC 1980):
SIC 5541 - Soorting Goods Stores
Businesses primarily engaged in retail dealing in sporting goods. playground and gymnasium equipment. Businesses may be described by product line such as: retail archery equipment. retail athletic clothing (including uniformsl. retail athletic footwear. retail baseball equipment, retail bowling equipment. retail camping equipment lexcept tent trailersl, retail sports and fishing tackle, retail football equipment, retail golf equipment, retail hockey equipment. retail hunting equipment. retail piayground equipment, retail skiing equipment. retail soccer equipment. retail softball equipment. sporting goods stores, retail tennis equipment, and retail track and field equipment.

(1) Average labour units are calculated by dividing total payroli by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours. Statistics Canada. Catalogue 72-002. An average labour unit could be interpreted as a fuli-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.
See table 1 for symbols and notes.

## Symbols

- zero or no observations
- too small too be expressed
... not applicable
$\times$ confidential

## Footnotes

(1) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
2) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of all businesses in the sample }} \times 100$ for each quartile.
(3) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100$ for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal 100\%.

Notes
Data are shown by quartiles when at least 13 of the sampled businesses report the specific iten.
Records were ranked in ascending order according to sales size. Each quartile (i.e. bottom 25\%, lower middle 25\%, etc.) represents one quarter of the total number of businesses. Hithin each quartile, the average ratio is presented. for comparison purposes. the high and low values of sales are shown.

How to use the tables
(11) Locate the appropriate sales range that is displayed on the two lines entitled "Low sales value" and "High sales value".
(2) The selected range will indicate tha proper quartile. i.e. the botom $25 \%$, the lower midde $25 \%$, the upper midde $25 \%$ or the top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartile.

## Standard Industrial Classification Definition \{SIC 1980]:

SIC 9650 - Sports and Recreation Clubs and Services
Businesses primarily engaged in operating golf courses. curling clubs. skiing facilities. boat rentals, marinas and other sports and recreation clubs and services.

-- too small too be expressed
... not applicable
$x$ confidential

## Footnotes

(1) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Value in each cell $=\frac{\text { Iotal weighted expenditure on a given item }}{\text { rotal weighted sales of all businesses in the sample }} \times 100$ for each quartile
(3) Value in each cell $=\frac{\text { Total weighted axpenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100$ for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal $100 \%$.

## Notes

Nata are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile li.e. bot tom 25\%, lower middle 25\%, etc.) represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. For comparison purposes, the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range that is displayed on the two lines entitled "Low sales value" and "High sales value".
(2) The selected range will indicate the proper quartile. i.e. the botiom 25\%, the lower middle 25\%, the upper middle $25 \%$ or the top 25\%.
(3) Data pertaining to the selected sales size range will be in thet quartile.

## Standard Industrial C(assification Definition (SIC 1980):

SIC 3040 - Stamped, Pressed and Coated Metal Products Industries
Businesses primarily engaged in custom metal coating. manufacturing metal closures and containers and other stamped u.d pressed metal products.

$11 i$ The ratios represent the average of ratios for each business in the group and cannot be calculated from the figures shown in fable 2 .
(2) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2.000 .000$.

See Table 1 for symbols and notes.

Definitions:

1. Liquidity ratio:

Curren: = current assets / current liabilities.
2. Leverage ratios:
a) Dedt/equity = total liabilities / equity.
ol Deb: ratio $=$ total liabilities / total assets.
c) interest coverage $=$ net profit * interest expense / interest expense.

| 1987 |  |  |  |  |  |
| Total | 1，397 | 1．173．137 | 45，435 | 145 | －•• |
| $\begin{aligned} & \text { less than } 20 \\ & 20-99 \\ & 100-499 \\ & 500 \text { and over } \end{aligned}$ | 906 313 108 70 | 124.762 287.447 277.468 483.450 | 4.864 11.153 10.747 18.671 | 121 15 8 1 | $\cdots$ |

（1）Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the
Survey of Employment．Payroll and Hours，Statistics Canada．Catalogue 72－002．An average labour unit could be interpreted as a full－time employee．Note that the business size groups used are determined at the Canada level．Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group．
（2）Refers to businesses reporting no oayroll deductions in the previous year．
（3）Refers to businesses reporting no payroll deductions in the following year．
＂Newly redorting＂and＂no longer reporting＂businesses are assumed to have been in activity for six months and the information is adjusted accordingly．

See Table 1 for symbols and notes．

## Footnotes

(1). These estimatas are based on a sample of businesses reporting salas between $\$ 25,000$ and $\$ 2,000,000$.
2) Value in each cell $=$ Total weighted expenditure on a given item
(3) Value in each cell $=\frac{\text { Total weighted sales of all businesses in the sample }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100 \quad$ for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. fherefore these ratios are calculatad individually and the total will not necessarily equal $100 \%$.

## Notes

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Eech quartile (i, e. bottom 25\%, lower midda 25\%, etc.l represents one quarter of the total number of businesses. Within each quartila, the avarage ratio is presented. for comparison purposes, the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range, that is displayed on the two lines entitled "Low sales value" and "High sales value"
(2) The salected range wil! indicate the proper quartile, i.e. the bottom $25 \%$, the lower midde $25 \%$, the upper midde $25 \%$ or the top 25\%.
(3) Data pertaining to the selected salas size range will be in that quartile.

Standard Industrial Classification Definition (SIC 1980):
SIC 9213 - Take-Out Food Services
Businesses primarily engaged in preparing and selling packaged or wrapped food to the public for consumption away from the premises such as: take-out chinese foods, doughnut shops, take-out fish and chips. take-out fried chicken, hot dog stands, ice cream stands, take-out pizzerias, refreshment booths and prepared food take-out services lexcept caterers and mobile food servicesl

| 1987 |  |  |  |  |  |
| Total | 8.535 | 477,788 | 52,757 | 2,582 | . |
| ```less than 20 20-99 100 - 499 500 and over``` | 8.075 411 42 7 | $\begin{array}{r} 262,102 \\ 114,741 \\ 36.965 \\ 63,980 \end{array}$ | $\begin{array}{r} 28,990 \\ 12,643 \\ 4,145 \\ 6,979 \end{array}$ | 2,498 75 8 1 | $\cdots$ $\cdots$ $\cdots$ |

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the

Survey of Employment, Payrall and Hours. Statistics Canada. Catalogue 72-002. An average labour unit could be interpreted as a
full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least
500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes

## Footnotes

（1）These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\mathbf{\$ 2 , 0 0 0 , 0 0 0}$
（2）Value in each cell＝Total weightad expenditure on a given item
（3）Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times$ foo forh quartile．
This portion of the table pertains only to the businesses raporting the specific expense item．Therefore these ratios are calculated individually and the total will not necessarily equal 100\％．

Notes
Data are shown by quartiles when at least 13 of the sampled businesses report the specific item．
Records were ranked in ascending order according to sales size，Each quartile（i，e．bottom 25\％，lower midde 25\％，etc，represents one quarter of the total number of businesses．Within each quartile，the average ratio is presented．for comparison purposes，the high and low values of sales are shown．

## How to use the tables

（1）Locate the appropriate sales range that is displayad on the two lines entitlad wow sales value＂and＂High sales value＂．
（2）The selected range will indicate the proper quartile，i．e．the bottom $25 \%$ ，the lower middle $25 \%$ ，the upper midde $25 \%$ or the top 25\％．
（3）Data pertaining to the selected sales size range will be in thet quartile．

Standard Industrial Classification Definition（SIC 1980）：
SIC 9221 －Taverns，Bars and Night Clubs
8usinesses primarily engaged in selling alcoholic beverages for consumption on the premises．food may be sold as a secondary activity． Bars（drinking places）．beer gardens．beer parlours，brasseries（beer gardensl．cabarets lnight clubsl and cocktail lounges are included in this industry．

TABLE 2. Balance sheet profile for incorporated businesses only, 1987

Footnotes
(1) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.

12) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of all businesses in the sample }} \times 100$ for each quartile.
(3) Value in each cell $=$ Total weighted expenditure on a given item
Total weighted sales of businesses reporting this item of expenditure $\times 100$ for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal $100 \%$.

## Notes

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records wers ranked in ascending order according to sales size. Each quartile li.e. bottom 25\%, lower middle 25\%. etc.) represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. For comparison purposes, the high and low values of sales are shown.

## How to use the tables

|it Locate the appropriate salas range that is displayed on the two lines entitied "Low sales value" and "High sales value".
(2) The selected range will indicate the proper quartile, i.a. the botom $25 \%$, the lower middle $25 \%$, the upper midde $25 \%$ or the top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartile.

Standard Industrial Classification Definition (SIC 1980):
SIC 4581 - Taxicab Industry
Businesses primarily engaged in providing passenger transportation by automobiles not operated on regular schedules or between fixed terminals. Taxicab fleet owners and organizations are included regardless of whether drivers are hired, rent their cabs or are otherwise compensated. Also included are those who own and operate their own taxicabs. Taxi dispatching services. road motor vehicle taxi services and taxicab services are included in this industry.

SDURCE: Small Business and Special Surveys Division, Statistics Canada.

（1）These estimates are based on a sample of incorporated businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$ ．Sample count includes only those businesses reporting a statement of changes．
See Table 1 for symbols and notes．
TABLE 5．Employment changes by size of business，1984－1987 based on SIC classification in 1987
Canada，Taxicab Industry（SIC 4581）

（1）Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment．Payroll and Hours，Statistics Canada．Catalogue 72－002．An average iabour unit couid be interpreted as a full－time employee．Note that the business size groups used are determined at the Canada levei．Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group．
（2）Refers to businesses reporting no payroll deductions in the previous year．
（3）Refers to businesses reporting no payroll deductions in the following year．
＂Newly reporting＂and＂no longer reporting＂businesses are assumed to have been in activity for six months and the information is adjusted accordingly．

See table 1 for symbols and notes．

(1) The ratios represent the average of ratios for each business in the group and cannot be calculated from the figures shown in fable 2 .
(2) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.

See lable 1 for symbols and notes.

Definitions:

1. Liquidity ratio:

Current $=$ current assets / current liabilities
2. Leverage ratios:

Debt/equity = total liabilities / equity.
b) Dedt ratio $=$ total iiabilities / total assets.
c) Interest coverage $=$ net profit . interest expense / interest expense.

TABLE 4. Statement of changes in financial position for incorporated businesses only, 1987 Canada, Television, Radio \& Stereo Stores (SIC 6222)

(1) These estimates are based on a sample of incorporated businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$. Sample count inciudes only those businesses reporting a statement of changes.
See Table 1 for symbols and notes.

TABLE 5. Employment changes by size of business, 1984-1987 based on SIC ciassification in 1987 Canada, Television, Radio \& Stereo Stores (SIC 6222)

| Business size expressed in average labour units(1) | Number of businesses | $\begin{array}{r} \text { Total payroll } \\ \left(\$ 000^{\prime} s\right) \end{array}$ | Average labour units(1) | Changes in number of businesses with paid employees |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | Newly reporting(2) | No longer reporting(3) |
| 1984 |  |  |  |  |  |
| Total | 3,442 | 255,906 | 17,549 | 826 | 483 |
| $\begin{aligned} & \text { less than } 20 \\ & 20-99 \\ & 100-499 \\ & 500 \text { and over } \end{aligned}$ | 3,316 96 18 12 | 136.343 42.831 27.239 49.693 | 8.864 2.752 1.757 4.176 | 809 14 3 | 466 13 4 |
| 1987 |  |  |  |  |  |
| Total | 3.569 | 396,678 | 24.084 | 545 | $\cdots$ |
| less than 20 $20-99$ $100-499$ 500 and over | 3,362 163 26 18 | 177.663 72.327 51.028 95.660 | 10.460 4.222 2.959 6.443 | 511 28 7 1 | $\cdots$ $\cdots$ $\cdots$ |

(1) Avarage labour units are calculated by dividing tota! payroll by the average aninual wage and salary rate as reported in the Survey of Employment, Payroll and Hours. Statistics Canada, Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the .Canada level. Thus if a business has at least 500 employe $\quad$ in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six manths and the information is adjusted accordingly.

See Table 1 for symbols and notes.

## Symbols

Syabols or no observations
-- too small too be expressed
... not applicable
$\times$ confidential

## Footnotes

11) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Value in each cell $=\frac{\text { total weighted expenditure on a given iten }}{\text { total weighted sales of all businesses in the sampla }} \times 100$ for each quartile.
(3) Value in each cell $=$

Total weighted expenditure on a given item

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal $100 \%$.

## Notes

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile (i.e. bot tom 25\%, lower middle 25\%. etc.) represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. For comparison purposes. the high and low values of sales are shown.

How to use the tables
(11) Locate the appropriate sales range that is displayed on the two lines entitled "Low sales velue" and "High sales value".
(2) The selected range will indicate the proper quartile, i.e. the bottom $25 \%$, the lower midde $25 \%$, the upper middle $25 \%$ or the top $25 \%$.
(3) Data pertaining to the selected sales size range will be in thet quartile.

## Standard Industrial Classification Definition (SIC 1980):

SIC 9961- Ticket and Travel Agencies
Businesses primarily engaged in furnishing travel information, acting as agents in arranging tours. accommodation and transportation for traveliers or acting as independent agencies for transportation establishments. Included are businesses engaged in booking accomodation for travellers, booking transportation for travellers, travel arranging, travel booking and planning services, travel information services and vacation travel services.

SOURCE: Small Business and Special Surveys Division, Statistics Canada.

TABLE 2. Balance sheet profile for incorporated businesses only, 1987
Canada, Ticker and Travel Agencies (SIC 9961)

(1) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.

See Table 1 for symbols and notes.

(11 Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours. Statistics Canada, Catalogua 72-002. An average labour unit could be intarpreted as a Survey of employment, Nayron employee. Note that the business size groups used are determined at the Canada level. Thus if a businass has at least full-time employee. Note that the business size groups used are determined at the hanada ever in the 500 employees in Canada as a whole but less than that number in aner group.
121 Refers to businesses reporting no payroll deductions in the previous year.
131 Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.
See rable 1 for symbols and notes.

## Symbols

- zero or no observations
-- too smell too be expressed
... not applicable
$\times$ confidential

## Footnotes

(1) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$. Total weighted expenditure on a given item

13) Value in eech cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100$ for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal $100 \%$.

## Notes

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile li.e. bottom 25\%. lower midde 25\%, etc.l represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. for comparison purposes, the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range that is displayed on the two lines entitled "Low sales valuen and "High sales value".
(2) The selected range will indicate the proper quartile, i.e. the bottom $25 \%$, the lower middle $25 \%$, the upper midde $25 \%$ or the top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartile

Standard Industrial Ciassification Definition (SIC 1980);
S1C 6342-Tire, Battery, Parts and Accessories Stores
Businesses primarily engaged in retail dealing in new or used tires, tubes, batteries and other automodile parts and accessories separately or in combination. These businesses may be secondarily engaged in tire installation and repair as well as in automobile repair. this industry includes the following types of retail operations: retail automotive batteries, retail automotive parts and accessories. retail automotive cassettes and 8-track tape recorders. retail motor vehicle radios lincluding $\mathrm{C} . \mathrm{B}$. or GRSI, retail motor vehicle stereos, retail motor vehicle tape decks and retail tires and tubes.

(1) The ratios represent the average of ratios for each business in the group and cannot be calculated from the figures shown in fable 2 .
(2) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.

See Table 1 for symbols and notes.

Definitions:
i. Liquidity ratio:

Current = current assets / current liabilities.
2. Leverage ratios:
al Debt/equity $=$ total liabilities / equity.
bl Debt ratio = total liabilities / total assets.
c) Interest coverage $=$ net profit $+i n t e r e s t$ expense $/$ interest expense.

TABLE 4. Statement of changes in financial position for incorporated businesses only, 1987
Canada, Tire, Battery, Parts and Accessories Stores (SIC 6342)

(1) These estimates are based on a sample of incorporated businesses reporting sales between $\$ 25,000$ and $\$ 2,000,0.00$. Sample count includes anly those businesses reporting a statement of changes.
See rable 1 for symbols and notes.

TABLE 5. Employment changes by size of business, 1984-1987 based on SIC classification in i987 Canada, Tire, Battery, Parts and Accessories Stores (SIC 6342)

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment. Payroll and Hours, Statistics Canada. Catalogue 72-002. An average labour unit could be interpreted as a iull-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 emplayees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previaus year.
(3) Refers to businesses reporting no payroll deductions in the iollowing year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes.

## Symbols

- zero or no observations
-- too small too be expressed
... not applicable
$\times$ confidential

## Footnotes

(1) These estimates are based on a sampie of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Vaiue in each cell $=\frac{\text { Total welghted expenditure on a given itam }}{\text { Total weighted sales of all businesses in the sample }} \times 100$ for each quartile.
(3) Value in each cell $=\frac{\text { Total weighted expenditure on a givan item. }}{\text { Total weighted sales of businessas raporting this item of expenditure. }} \times$ for each quartile.
. This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal $100 \%$.

## Notes

Data are shown by quartiles when at least 13 of the samplad businesses report the specific item.
Records were renked in ascending order according to sales size. Each quartile li.e. bottom 25\%, lower middle 25\%, etc.l represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. For comparison purposes, the high and low values of sales are shown.

## How to use the tables

(1) Locate the appropriate sales range that is displayed on the two lines entitied "Low sales value" and "High sales value".
(2) The selected range will indicate the proper quertile, i.e. the botom $25 \%$, the lower middie $25 \%$, the upper middle $25 \%$ or the top $25 \%$.
(3) Data pertaining to the selected sales size range will be in that quartile.

Standard Industrial Classifigation Definition (SIC 1980):
SIC 6580 - Toy, Hobby. Novelty and Souvenir Stores
Businesses primarily engaged in retail dealing in toys, hobby supplies. gifts. novelties and souvenirs.

| 1987 |  |  |  |  | . |
| Total | 4.930 | 214,330 | 15,922 | 1.101 | -•• |
| $\begin{aligned} & \text { less than } 20 \\ & 20-99 \\ & 100-499 \\ & 500 \text { and over } \end{aligned}$ | 4.786 81 55 8 | 126,866 30,592 40.501 16,371 | $\begin{aligned} & 9.408 \\ & 2.263 \\ & 3.018 \\ & 1.233 \end{aligned}$ | 1.086 8 6 1 | $\cdots$ $\cdots$ $\cdots$ |

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the

Survey of Employment. Payroll and Hours. Statistics Canada, Catalogue 72-002. An average labour unit could be interpreted as a
full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes.

SOURCE: Small Business and Special Surveys Division. Statistics Canada.

## footnotes

(1) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.
(2) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total waighted sales of all businesses in the sample }} \times 100$ for each quartile.

131 Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100$ for each quartile.
This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal $100 \%$.

## Notes

Data are shown by quartiles when at least 13 of the sampled businessas.report the specific item.
Records were ranked in ascending order according to sales size. Each quartile (i.e. botom 25\%. lower middle 25\%, etc.) represents one quarter of the total number of businesses. Hithin each quartile, the average ratio is presented. For comparison purposes, the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range that is.displayed on the two lines entitled "Low sales value" and "High sales value"
(2) The salected range will indicate the proper quartile, i.e. the botom $25 \%$, the lower middle $25 \%$, the upper middle $25 \%$ or the top $25 \%$.
(3) Data pertaining to the selected sales size range will be in that quartile

## Standard Industrial Classification Definition iSIC 1980):

SIC 4560 - Truck Transport Industry
Businesses primarily engaged in the provision of all tyoes of trucking, transfer and related services. Truck "broker-operators" are included in this industry.

SOURCE: Small Business and Special Surveys Division, Statistics Canada.

(1) The ratios represent the average of ratios for eech business in the group and cannot be calculated from the figures shown in rable 2 .
$(2)$ These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2.000 .000$.
See Table 1 for symbols and notes.

Definitlons:

1. Liquidity ratio:

Current = curtent assets / cutrent liabilities.
2. Leverage ratios;
a) Debt/equity = total liabilities / equity.
b) Debt ratio $=$ total liabilities / total assets.
c) Interest coverage $=$ net profit + interest expense $/$ interest expense.

TABLE 5. Employment changes by size of business, 1984-1987 based on SIC classification in 1987
Canada, Truck Transport Industries (SIC 456)

(11) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the

Survey of Employment, Payroll and Hours. Statistics Canada. Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes.

Symbols

- zero or no observations
-- too small too be expressed
... not applicable
$\times$ confidential

Footnotes
(1) These estimates are based on a semple of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$. lotal weighted expenditure on a given item
(2) Value in each cell $=\overline{\text { Total weighted sales of all businesses in the sample }} \times 100$ for each quartile.
3) Value in each cell= Total weighted expenditure on a given item Total weighter sales of a $\times 100$ for each quartile.

This portion of the table pertatns only to the businesses reporting the specific expense item. Therefora these ratios ara calated individually and the total will not necessarily equal $100 \%$.

Notes
Data are shown by quartiles when at leest 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile (i.e. bottom 25\%. lower midde 25\%. etc.) represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. for comparison purposes. the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate salas range that is displeyed on the two lines entitlad "Low salas value" and "High sales valuen
(2) The selected range will indicate the proper quaptile, i.e. the botiom $25 \%$, tha lower middie $25 \%$, the upper midde $25 \%$ or the top $25 \%$.
(3) Data pertaining to the selected sales size range will be in thet quartile.

Standard Industrial Classiflcation Definition (SIC 1980):
SIC 9212 - Unlicensed Restaurants (Including Drive-Ins)
Businesses primarily engaged in preparing and serving meals for consumption on the premises but without a license to serve alcoholic beverages. Included are businesses commonly referred to as "driverins" where food is consumed either in customers" motor vehicles or at tables in or about the premises. Drive-in restaurants. unlicensed restaurant services and unlicensed restaurants are included in this industry.

(i) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the

Survey of Employment, Payroll and Hours, Statistics Canada, Catalogue 72-002, An average labour unit could be interpreted as a
fuli-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least
500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
2) Refers to businesses reporting no payrall deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes

$\times$ confidantial

## Footnotes

(1) These estimates are basad on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$
$12 \mid$ Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of all businesses in the sample }} \times 100$ for each quartile.
$\left(31\right.$ Value in each cell $=\frac{\text { Total weighted expenditura on a given item. }}{\text { Total weighted sales of businesses raporting this item of expenditure }} \times 100$
Fhis portion of the table pertains only to the businesses reporting the specific expense item. Therefore thase ratios are calculated individually and the total will not necessarily equal $100 \%$.

## Notes

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Racords were ranked in ascending ordar according to sales size. Each quartile (i.e. bottom 25\%. lower middle 25\%, etc.) represants one quarter of the total number of businesses. Within each quartile, the average ratio is presented. for comparison purposes, the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range that is displayed on the two lines entitled "tow sales value" and wigh sales vaiue".
(2) The selected ranga will indicate the proper quartile, i.e. the bottom 25\%, the lower midde $25 \%$, the upper midde $25 \%$ or the top 25\%.
(3) Data pertaining to the salacted sales size range will be in that quartila.

Standard Industrial Classification Definition (SIC 1980):
SIC 6911 - Vending Machine Operators
Businesses primarily engaged in retail dealing. using coin-operated vending machines to dispense a variety of products. Included are beverage vending machine operators, cigarette vending machine operators. confectionery vending machine operators. food vending machine operators and retail non-store vending machine merchandise.

SOURCE: Smali Business and Special Surveys Division. Statistics Canada.

(1) The ratios represent the average of ratios for each business in the group and cannot be calculated from the figures shown in table 2 .
(2) These estimates are based on a somple of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.

See Table 1 for symbols and notes.

Definitions:

1. Liquidity ratlo:

Current = current assets / current liabilities
2. Leverage ratios:
al Debt/equity = total liabilities / equity.
bl Debt ratio = total liabilities/rotal assets
c) Interest, coverage $=$ net profit interest expense / interest expense.

TABLE 4. Statement of changes in financial position for incorporated businesses onily, 1987
Canada, Vending Machine Operators (SIC 69i1)

11) These estimates are based on a sample of incorporated businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$. Sample count includes only those businesses reporting a statement of changes.
See Table $\mid$ for symbols and notes.

TABLE 5. Employment changes by size of business, 1984-i987 based on SIC classification in 1987
Canada, Vending Machine Operators (SIC 6911)

11) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reportad in the Survey of Employment. Payroll and Hours. Statistics Canada. Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
12) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes.

Footnotes
(1) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$. lotal weighted expenditure on a given item
(2) Value in each cell $=\frac{\text { Total weighted sales of all businesses in the sample }}{\times 100 \text { for each quartile. } . ~(1)}$
(3) Value in each cell $=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100$ for each quartile.

This portion of the tabie partains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal $100 \%$.

## Notes

Date are shown by quartiles when at least 13 of the sampled businessas report the specific item.
Racords were ranked in escending order eccording to sales size. Each quartile (i.e. bottom 25x, lower middle 25\%, etc.) represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. For comparison purposes, the high and low values of sales are shown.

How to use the tables
(11) Locate the appropriate sales range that is displayad on the two lines entitled "Low sales valuen and "high sales value".
(2) The selacted range will indicate the proper quartile, i.e. the bottom $25 \%$, the lower middla $25 \%$, the upoer middle $25 \%$ or the top 25\%.
(3) Data parteining to the selected seles size range will ba in that quartile.

Standard Industrial Classification Definition (SIC 1980):
SIC 9912 - Audio-Visual Equipment-Rental and Leasing
Businesses primarily engaged renting and leasing audio-visual equipment. Businesses angaged in audio-visual rental and leasing. projection equipment rental, public address system rental, rental of audio-visuai equipment. sound equipment rental, tape recorder rental and television rental are included in this industry.

(1) The ratios rapresent the average of ratios for each business in the group and cannot be calculated from the figures shown in table 2 .
(2) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.

See rable 1 for symbols and notes.

Definitions:

1. Liquidity ratio:

Current = current assets / current liabilities.
2. Leverage ratios:
a) Debt/equity = total iiabilities / equity.
b) Debtratio = total liabilities/total assets.
c) Interest coverage $=$ net profit interest expense / interest expense.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the

Survey of Employment. Payroll and Hours. Statistics Canada, Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employegs in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses raporting no payroll deductions in the previous year.
(3) Refers to businesses raporting no payroll deductions in the following year
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes.

## Symbols

. zero or no observations
.- too small too be expressed
... not applicable
$\times$ confidential
Footnotes
(1) Thesa estimates are based on a sample of businesses reporting sales betwean $\$ 25,000$ and $\$ 2,000,000$.
(2) Value Total weightad expenditure on a given item
(3) Value in each cell $=\frac{\text { Total weighted sales of all businesses in the sample }}{\text { Total weighted sales of businessas reporting this item of expenditure }} \times 100$ for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal $100 \%$.

## Notes

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile li.e. bottom 25\%, lower middle 25\%, etc.) represents one quarter of the total number of businesses. Hithin each quartile, the average ratio is presented. For comparison purposes, the high and low values of sales are shown.
How to use the tables
(1) Locate the appropriate sales range that is displayed on the two lines entitled "Low sales valuen and "High sales valuen.
(2) The salected range will indicate the proper quartile, i.e. the bottom $25 \%$, the iower middle $25 \%$, the upper middle $25 \%$ or the top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartile.

## Standard Industriai Classification Definition (SIC 1980):

SIC 9942 - Welding
Businesses primarily engaged in repair work by welding such as: acetylene welding services, biacksmith services, brazing fweldingl services. eiectric weiding services lexcept construction sitel, welding repair work and welding shops.

## WET HEATING AND AIR CONDITIONING WORK

CANADA

1987

TABLE 1. Selected operating ratios, in percent of sales, 1987
Canada, Wet Heating \& Air Conditioning Work (SIC 4243)

## Symbols

- zero or no observations
-- too small too be expressed
... not appiicable
$\times$ confidantial

## Footnotes

(1) These estimates are basad on a sample of businesses reporting sales betwean $\$ 25,000$ and $\$ 2,000,000$,

Total weighted expenditure on a given item
$\times 100$ for each quariile.
Total weighted sales of all businesses in the sample
(3) Value in each cell =

Total weighted expenditure on a given item
Total weighted sales of businesses reporting this item of expenditure $\times 100$ for each quariile.
This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculat individually and the total will not necessarily equal $100 \%$.

Notes
Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile (i.e. bottom 25\%, lower middle 25\%, etc.) represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. For comparison purposes, the high and low values of sales are shown.

## How to use the tables

(1) Locete the appropriate sales range that is displayed on the two lines entitled wow sales value" and migh sales value"
(2) The selected range will indicate the proper quartile, i.e. the bottom $25 \%$, the lower middle $25 \%$, the upper middle $25 \%$ or the top $25 \%$.
(3) Data pertaining to the selectad sales size range will be in that quartile.

## Standard Industrial Classification Definition (SIC 1980):

SIC 4243 - Het Heating and Air Conditioning Contractors
Businesses primarily engaged in the installation and repair of secondary hot water or system heating systems, cooling and air conditioning equipment and solar heating systems involving liquids. These businesses include: central air conditioning installation. contractors instaliing steam boilers lexcluding power boilersl. installation of central cooling equipment and piping, instatlation of cooling towers, heat pump installation; installation of hydronic heating systems, installation of secondary hot water and steam piping systems, installation of snow melting equipment lliquid systemsl, solar heating fluid systems installation. installation of unitary heating. cooling or air conditioning equipment, installation of heating and air conditioning water pumping systems and the installation of central wet heating equipment and piping.

TABLE 3. Financial ratios(1) for incorporated businesses only, 1987
Canada, Wet Heating \& Air Conditioning Work (SIC 4243)

(i) The ratios represent the average of ratios for each business in the group and cannot be calculated from the figures shown in table 2 .
(2) These estimates are based on a sample of businesses reporting sales between $\$ 25,000$ and $\$ 2,000,000$.

See rable $i$ for symbols and notes.

## Definitions:

1. Liquidity ratio:

Current $=$ current assets $/$ current liabilities.
2. Leverage ratios:
al 0ebt/equity $=$ total liabilities / equity.
b) 0ebt ratio = total liabilities / total assets.
c) Interest coverage = net profit + interest expense / interest expense.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment. Payroll and Hours, Statistics Canada. Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes.

2) Value in total weighted expenditure on a given item
(2) Value in each cell \(=\overline{\text { Total weighted sales of all businesses in the sample }} \times 100\) for each quartile.
(3) Value in each cell = Total weighted expenditure on a given item \(\times 100\) for each quartile. Total weighted sales of businesses reporting this item of expenditure

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal \(100 \%\).

\section*{Notes}

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile (i.e. bottom 25\%. lower midde 25\%, etc.) represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. For comparison purposes, the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range that is displayed on the two lines entitled "Low sales value" and "High sales value"
(2) The selected range will indicate the proper quartile, i.e. the bottom \(25 \%\), the lower middle \(25 \%\), the upper middle \(25 \%\) or the top \(25 \%\).
(3) Data pertaining to the selected sales size range will be in that quartile

\section*{Standard Industrial Classification Definition (SIC 1980):}

SIC 5310 - Wholesale Apparel
Businesses primarily engaged in wholesale dealing in men's and boys' clothing and furnishings; women's, misses' and children's outerwear, hosiery. underwear and apparel accessories: shoes and other footwear: and other apparel

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment. Payroll and Hours, Statistics Canada, Catalogue 72-002. An average labour unit could be interpreted as a full-time employer. Note that the business size groups used are determined at the canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes.

SDURCE: Small Business and Special Surveys Division. Statistics Canada.

Footnotes
(11) These estimates are based on a sample of businesses reporting sales between \(\$ 25,000\) and \(\$ 2,000,000\).
2) Value in each cell \(=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of all businesses in the sample }} \times 100\) for each quartile.
(3) Value in each cell \(=\frac{\text { Total weighted expenditure on a given item }}{\text { Total waighted sales of businesses reporting this item of expenditure }} \times 100\) for each quartile.

Total waighted sales of businesses reporting this item of expenditure
This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal 100\%.

Notes
Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile fi.e. bottom \(25 \%\), lower middle \(25 \%\), etc.l represents one quarter of the total number of businesses. Within each quertile, the average ratio is presented. For comparison purposes, the high and low values of sales are shown.

How to use tha tables
(11 Locate the appropriate sales range that is displayed on the two lines entitied "Low sales value" and "High sales value".
(2) The selacted range will indicate the proper quartile. i.e. the bot tom \(25 \%\), the lower midde \(25 \%\), the upper midde \(25 \%\) or the top 25\%.
(3) Deta pertaining to the selected sales size range will be in that quartile.

\section*{Standard Industrial Classification Definltion (SIC 1980):}

SIC 5711 - Wholesale Farm Machinery, Equipment and Supplies
Businesses primarily engaged in wholesale dealing in new or used farm machinery, equipment, supplies and parts. ihis incustry includes businesses primarily engaged in selling such equipment directly to farmers as well as those selling to farm equipment dealers. Also included are businessas primarily engaged in the repair of farm machinery and equipment as well as those orimarily engaged in wholesaling garden and lawn tractors and equipment. Wholesale barn machinery and equipment lincluding elevatingl: wholesale comoines; wholesale crop preparation machinery fleaning, drying, conditioningl.; wholesale farm cultivators. seeders and spreaders: wholesale dairy farm machinery: wholesale farm implements: farm machinary and equipment repairs: wholesale farm machinery and equipment: wholesale garden and lawn tractors: wholesate farm grinders. mixers and crushers: wholesale farm crop harvesting machinery; wholesale haying machinery: wholesale irrigation equipment: wholesale farm crop planting machinery; wholesale farmandgarden ploughs, harrows and tillers; wholesale farm sprayers and dusters: wholesale farm swathers and windrowers and wholesale farm and garden tractors are also included in this industry.

(I) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment. Payroll and Hours. Statistics Canada, Catalogue 72-002. An average labour unit could be interpreted as a fuli-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group,
(2) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes.

\(\xrightarrow{\ldots} \frac{\text { CANADA }}{1987}\)

SMALL BUSINESS OFFICE

TABLE 1. Selected operating ratios, in percent of sales, 1987
Canada, Wholesale Food (SiC 521)

\section*{Symbols}
```

- zero or no observations
-= too smell too be expressed
... not applicable
x confidential

```

\section*{Footnotes}
(1) These estimates are based on a sample of businesses reporting sales between \(\$ 25,000\) and \(\$ 2,000,000\).
(2) Value in each cell \(=\) Total weighted expenditure on a given item
\(\left(31\right.\) Value in each cell \(=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100 \quad\) for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal \(100 \%\).

\section*{Notes}

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item
Records were ranked in ascending order according to sales size. Each quartile li.e. bottom \(25 \%\). lower middle \(25 \%\), etc. represents one quarter of the total number of businesses. Within each quartile. the average ratio is presented. For comparison purposes, the high and low values of sales are shown.

\section*{How to use the tables}
(1) Locate the appropriate sales range that is displayed on the two lines entited \({ }^{\text {n }}\) Low sales valuen and "High sales valuen.
(2) The selected range will indicate the proper quartile. i.e. the bot tom \(25 \%\), the lower middle \(25 \%\), the upper middle \(25 \%\) or the top \(25 \%\).
(3) Data pertaining to the selected sales size range will be in that quartile.

Standard Industrial Classification Definition (SIC 1980):
SIC 5210 - Wholesale Food
Businesses primarily engaged in wholesale dealing in confectionery, frozen foods (packaged), dairy products. poultry and eggs. fish and seafood. fresh fruits and vegetables. meat and meat products or other specialty lines of food.

\section*{Footnotes}
（1）These estimates are based on a sample of businessas reporting sales between \(\$ 25,000\) and \(\$ 2,000,000\) ．
（2）Value in each cel：\(=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of all businesses in the sample }} \times 100\) for each quartile．
（3）Value in each cell \(=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times\) loo for each quartile．
This portion of the table pertains only to the businessas reporting the specific expense item．Therefore these ratios are calculated individually and the total will not necessarily equal 100\％．

\section*{Notes}

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item．
Records were ranked in ascending order according to sales size．Each quartile li．e．bottom 25\％，lower middle 25\％，etc．l represents one quarter of the total number of businesses．Within each quartile，the average ratio is presented．for comparison purposes，the high and low values of sales are shown．

How to use the tables
（1）Locate the appropriate sales range thet is displayed on the two lines entitled＂low sales value＂and＂High sales value＂．
（2）The selected range will indicate the proper quartile，i，e．the bottom \(25 \%\) ，the lower middle \(25 \%\) ，the upper middle \(25 \%\) or the top 25\％．
（3）Data pertaining to the selected sales size range will be in that quartile．

Standard Industrial Classification Definition（SIC 1980）：
SIC 5980 －Wholesale General Merchandise
Businesses primarily engaged in wholesale dealing in a diversified line of household merchandise of which hardware．foods，clothing．
sporting goods．toys and games tend to be the most important，but no line is sufficiently important to constitute a primary activity．

SOURCE：Small Business and Special Surveys Division，Statistics Canada．

12) These estimates are based on a sample of businessas reposting sales between \(\$ 25,000\) and \(\$ 2,000,000\).

See Table 1 for symbols and notes.

Definitions:
1. Liquidity ratio:

Current = current assets / current liabilities.
2. Leverage ratios:
al Debt/equity = total liabilities / equity.
b) Debt ratio \(=\) total liabilities / total assets.
c) Interest coverage \(=\) net profit \(+i n t e r e s t ~ e x p e n s e ~ / ~ i n t e r e s t ~ e x p e n s e . ~\)

TABLE 4. Statement of changes in financial position for incorporated businesses only, 1987
Canada, Wholesale General Merchandise (SIC 598)

(1) These estimates are based on a sample of incorporated businesses reporting sales between \(\$ 25.000\) and \(\$ 2.000 .000\). Sample count includes only those businesses reporting a statement of changes.
See Table \(\{\) for symbols and notes

TABLE 5. Employment changes by size of business, 1984-1987 based on SIC ciassification in 1987
Canada, Wholesale General Merchandise (SIC 598)
\begin{tabular}{llll}
\hline
\end{tabular}
(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the

Survey of Employment. Payroll and Hours, Statistics Canada. Catalogue 72-002. An average labour unit could be interpreted as a
full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least
500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and notes.

TABLE 1. Selected operating ratios, in percent of sales, 1987
Canada, Wholesale Industrial Machinery Equipment and Supplies (SIC 5731)

Symbols
- zero or no observations
.- too small too be expressed
... not applicable
\(\times\) confidential

\section*{Footnotes}
(1) Thase estimates are based on a sample of businesses reporting sales between \(\$ 25,000\) and \(\$ 2,000,000\)
2) Value in Tal weighted expenditure on a given item
(3) Value in each cell \(=\frac{\text { Total weighted sales of alt businesses in the sample }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times\) lote on given iten \(\quad\) for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Fherefore these ratios are calculated individually and the total will not necessarily equal \(100 \%\)

\section*{Notes}

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item
Records were ranked in ascending order according to sales size. Each quartile (i.e. bottom 25\%, lower midde 25\%, etc.) fepresents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. For comparison purposes, the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriste sales range that is displayed on the two lines entitled "Low sales value" and "High sales value"
12) The selected range will indicate the proper quartile, i.e. the bottom \(25 \%\), the lower midde \(25 \%\), the upper middle \(25 \%\) or the top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartile.

\section*{Standard Industrial Classification Definition (SIC 1980):}

SIC 5731 - Wholesale Industrial Machinery, Equipment and Supplies
Businesses primarily engaged in wholesale dealing in any type of new and used industrial machinery, equipment, supplies and parts, including non-electric powerhouse and power transmission equipment, materials handing equipment and industrial tractors. ihis industry also includes wholesale chemical industries machinery, equipment and supplies; wholesale compressors and vaccuum pumps; wholesale conveying equipment lexc farml; wholesale elevating machinery lexcept farmi: wholesale food and beverage processing machinery: wholesale foundry machinery and equipment: wholesale hoisting machinery and equipment lexcept construction and forestryl: wholesale industrial furnaces. kilns and ovens: wholesale industrial machinery. equipment and supplies; wholesale lift trucks lexcept construction and forestiry: wholesale mechanical and power transmission equipment: wholesale metal working machinery: wholesale power plant machinery; wholesale power transmission equipment lexcept electricall: wholesale powerhouse equipment lexcept electricall; wholesale printing and lithographing industries machinery: wholesale pulp and paper industry machinery; wholesale industrial pumps: wholesale textile industries machinery, equipment and supplies and wholesale welding and machinery.

(1) The ratios represent the average of ratios for each business in the group and cannot be calculated from the figures shown in Table 2 .
12) These estimates are based on a sample of businesses reporting sales between \(\$ 25,000\) and \(\$ 2,000,000\).

See Table 1 for symbols and notes.
.efinitions:
1. Liquidity ratio:

Current \(=\) current assets / current liabilities.
2. Leverage ratios:
al Debt/equity = total liabilities / equity
b) Oebt ratio = total liabilities / total assets
c) Interest coverage \(=\) net profit - interest expense / interest expense.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment. Payroll and Hours. Statistics Canada. Catalogue 72-002. An average labour unit could be interpreted as a
full-time employee. Note that the business size grcups used are determined at the Canada level. Thus if a business has at least
500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table \(\mid\) for symbols and notes.

\section*{Symbols}
- zero or no observations
-- too small too be expressed
... not applicable
\(\times\) confidential
Footnotes
(i) These estimates are based on a' sample of businessas reporting sales between \(\$ 25,000\) and \(\$ 2,000,000\).
(2) Value in each cell \(=\frac{\text { Total waighted expenditure on a given item }}{\text { Total weighted sales of all businesses in the sample }} \times 100\) for each quartile.
(3) Value in each cell \(=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100\) for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios ara calculated individually and the total will not necessarily equal \(100 \%\).

Notes
Data are shown by quartiles when at last 13 of the samplad businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile (i.e. bottom \(25 \%\), lower middle \(25 \%\), etc.) represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. For comparison purposes, the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales.range that is displayed on the two lines entitied "Low sales value" and "high sales value".
(2) The selected range will indicate the proper quartile, i.e. tha bottom \(25 \%\), the lower middle \(25 \%\), the upper middie \(25 \%\) or the top \(25 \%\).
(3) Data pertaining to the selected sales size range will be in that quartile.

\section*{Standard Industrial Classification Definition (SIC 1980):}

SIC 5630 - Wholesale Lumber and Building Materials
Businesses primarily engaged in dealing in lumber. plywood and miliwork; paint, glass and wallpaper; and other building materials.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment. Payroll and Hours. Statistics Canada. Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previaus year.
(3) Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adiusted accordingly.

See Table 1 for symbols and notes.

\section*{Symbols}
- zero or no observations
-- too small too be expressed
... not applicable
\(\times\) confidential

\section*{footnotes}
(1) These estimates are based on a sample of businesses reporting sales between \(\$ 25,000\) and \(\$ 2,000,000\).
(2) Value in each oell = rotal weighted expenditure on a given item
(3) Value in each cell \(=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100\) for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal \(100 \%\).

Notes
Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartite li.e. bottom \(25 \%\). lower middle 25\%. etc.l represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. For comparison purposes, the high and low velues of sales are shown.

\section*{How to use the tables}
(1) Locate the appropriate seles range that is displayed on the two lines entitled "Low sales value" and "high sales value".
(2) The selected range will indicate the proper quartile, i.e. the botom \(25 \%\). the lower middle \(25 \%\), the upper middle \(25 \%\) or the top \(25 \%\).
(3) Data pertaining to the selected sales size range will be in that quartile.

Standard Industrial Classification Definition (SIC 1980):
SIC 5520 - Wholesale Motor Vehicle Parts and Accessories
Businesses primarily engaged in wholesale dealing in tires, tubes and other motor vehicle parts and accessories.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours. Statistics Canada, Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
12) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers io businesses reporting no payrall deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See rable I for symbols and notes.

\section*{rooknotes}
(1) These estimates are based on a sample of businesses reporting sales between \(\$ 25,000\) and \(\$ 2,000,000\).
(2) Value in each cell \(=\) Total weighted expenditure on a given item
(3) Value in each cell \(=\frac{\text { Total waighted expenditura on a given item }}{\text { Total waighted sales of businesses reporting this item of expenditure }} \times 100 \quad\) for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculate individually and the total will not necessarily equal \(100 \%\).

\section*{Notes}

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item
Records were ranked in ascending order according to salas size. Each quartile (i.e. bottom 25\%, lower middle \(25 \%\). etc.) represents one quar ter of the total number of businesses. Within each quartile, the average ratio is presented. For comparison purposes. the high and low values of sales are shown.

How to use the tables
(11 Locate the appropriate sales range that is displayed on the two lines entitled "Low sales value" and "High sales value".
(2) Tha selected range will indicate the proper quartile, i.e. the botom 25\%, the lower middle \(25 \%\), the upper middle \(25 \%\) or the top \(25 \%\).
(3) Data pertaining to the selacted sales siza range will be in that quartile.

\section*{Standard Industrial Classification Definition (SIC 1980)}

SIC 5111 - Wholesale Petroleum Products
Businesses primarily engaged in wholesale dealing in refined petroieum products. Businesses primarily engaged in dealing in fuel oil and liquefied petroleum gases are classified in this industry regardess of whether their sales are considered to be wholesale or retail. Included are businesses engaged in wholesale bulk tank station, wholesale diesel fuel, wholesale fuel oil. wholesale furnace oil, wholesale gasoline, wholesale heating oil. wholesale kerosene. wholesale liquified petroleum gases, wholesale lubricating oils and greases. wholesale petroleum products and wholesale of refined petroleum products.

\end{tabular}
(1) The ratios represent the average of ratios for each business in the group and cannot be calculated from the figures shown in lable 2 .
(2) These estimates are based on a sample of businesses reporting sales between \(\$ 25,000\) and \(\$ 2,000,000\).

See Table 1 for symbols and notes.

\section*{Definitions:}
1. Liquidity ratio:

Current = current assets / current liabilities.
2. Leverage ratios:
a) Debt/equity = total liabilities / equity.
b) Debi ratio \(=\) total liabilities / total assets.
c) Interest coverage = net profit . interest expense / interest expense.

(1) These estimates are based on a sample of incorporated businesses reporting sales between \(\$ 25,000\) and \(\$ 2,000,000\). Sample count includes anly those businesses reporting a statement of changes.
Ses Table 1 for symbols and notes.

TABLE 5. Employment changes by size of business, 1984-1987 based on SIC classification in 1987 Canada, Wholesale Petroleum Products (SIC 5111)
\begin{tabular}{llll}
\hline
\end{tabular}
(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the

Survey of Employment. Payroll and Hours, Statistics Canada, Catalogue 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses reporting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no langer reporting" businesses are assumed to have been in activity for six months and the information is adjusted accordingly.

See Table 1 for symbols and.notes.

\section*{Symbols}
zero or no observations
too small too be expressed
not applicable
\(\times\) confidential

\section*{Footnotes}
(1) These estimates ere based on a sample of businesses reporting sales between \(\$ 25,000\) and \(\$ 2,000,000\).

21 Value in eech cell = \(\frac{\text { Total weighted expenditure on a given ltem }}{} \times 100\) for each quartile Total weighted expenditure on a given item
(3) Value in each cell \(=\frac{\text { Total weighted sales of businesses reporting this item of expenditure }}{x}\) loo for guartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal \(100 \%\)

\section*{Notes}

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile (i.e. bottom 25\%, lower middte 25\%, etc.) represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. for comparison purposes. the high and low values of sales are shown.

\section*{How to use the tables}
(1) Locate the appropriate sales range that is displayed on the two lines entitled "Low sales value" and "High sales value".
(2) The selected range will indicate the proper quartile, i.e. the botom \(25 \%\), the lower midde \(25 \%\), the upper midde \(25 \%\) or the top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartile.

\section*{Standard Industrial Classification Definition (SIC 1980):}

SIC 5622 - Wholesale plumbing, Heating and Air Conditioning Equipment and Supplies
Businesses primarily engaged in whotesale dealing in plumbing goods; non-electric heating equipment: air conditioning and ventilating equipment lexcept smali window-type units). Included are businesses engaged in wholesale of air conditioning equipment lexcept window type unitsl: wholesale of bathtubs and sinks; wholesale of non-refrigerated drinking fountains; wholesale metal fireplaces: whotesale fuel burning equipment: wholesale of non-electric furnaces. stoves and heaters: wholesale gas and oil heating equipment: wholesale of non-electric heating and cooking equipment: wholesale non-electric heating boilers; wholesale non-electric heating radiators: wiolesale oil and gas hot water heaters: wholesale laundry tubs; wholesale pipe fittings: wholesale plumbing fixtures: wholesale sanitary ware: wholesale sauna equipment: wholesale non-electric space and water heating stoves; wholesale toilet bowls and tanks: wholesale urinals: wholesale water and steam systems valves; wholesale ventilating equipment lexcept domestic fansl: wholesale non-electric warm air heating equipment and water softening equipment.

... not applicable
\(\times\) confidential
Footnotes
(1) These estimates are based on a sample of businesses reporting sales between \(\$ 25,000\) and \(\$ 2.000,000\)
(2) Value in each cell \(=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of all businesses in the sample }} \times 100\) for each quartile.
(3) Value in each cell \(=\frac{\text { Total weighted expenditure on a given item }}{\text { Total waighted sales of businesses reporting this item of expenditure }} \times\) for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal \(100 \%\).

\section*{Notes}

Data are shown by quartiles when at least 13 of the sampled businesses report the specific itern.
Records were ranked in ascending order according to sales size. Each quartiie li.e. bottom 25\%, lower middle 25\%, etc.) represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. For comparison purposes. the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range that is displayed on the two lines entitled "Low sales value" and "High sales value".
(2) The selacted range will indicate the proper quartile, i.e. the bottom \(25 \%\), the lower middle \(25 \%\), the upper middle \(25 \%\) or the top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartile.

Standard Industrial Classification Definition (SIC 1980):
SIC 5910 - Wholesale Waste Materials
Businesses primarily engaged in automobiie wrecking and in buying and seiling waste materials.

SOURCE: Small Business and Special Surveys Division. Statistics Canada.

\section*{Footnotes}
(1) These estimates are based on a sample of businesses reporting sales between \(\$ 25,000\) and \(\$ 2,000,000\).

21 Value in each cell \(=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of all businesses in the sample }} \times 100\) for each quartile.
(3) Value in each cell, \(=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of businesses reporting this item of expenditure }} \times 100\) for earile.

This portion of the table pertains only to the businesses reporting the specific expense item. Therefore these ratios are calculated individually and the total will not necessarily equal \(100 \%\).

Notes
Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile li. a. bottom 25\%. lower middle 25\%, etc.l fepresents one quarter of the total number of businesses. Hithin each quartile, the average ratio is presented. for comparison purposes, the high and low values of sales are shown.

How to use the tables
(1) Locate the appropriate sales range that is displayed on the two lines entitled "Low sales value" and "High sales value".
(2) The selected range will indicate the proper quartile. i.e. the bot tom \(25 \%\), the lower midde \(25 \%\). the upper middle \(25 \%\) or the . top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartile.

Standard Industrial Classiflcation Definition (SIC 1980):
SIC 2440 - Women's Ciothing Industries
Businesses primarily engaged in manufacturing women's. misses' and juniors' outerwear, sportswear, dresses, blouses. shirts and similar products according to recognized size scales. Both "regular" factories and "contract" factories making women's clothing are classified in this.industry group.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the env: firiter

Survey of Employment. Payroll and Hours. Statistics Canada. Catalogue 72-002. An average labour unit could be interpreted as a
full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business hastat* least: ini,
500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.
(2) Refers to businesses regorting no payroll deductions in the previous year.
(3) Refers to businesses reporting no payroll deductions in the following year.
"Newly reporting" and "no longer reporting" businesses are assumed to have been in activity for six months and the information" is tot " adjusted accordingly.

See Table 1 for symbols and notes

\section*{Footnotes}
(1) These estimates are based on a sample of businesses reporting sales betwaen \(\$ 25,000\) and \(\$ 2,000,000\).
(2) Value in each cell \(=\frac{\text { Total weighted expenditure on a given item }}{\text { Total weighted sales of all businesses in the sample }} \times 100\) for each quartile.
(3) Value in each cell \(=\) Total weighted expenditure on a given item
\(\times 100\) for each quartile.

This portion of the table pertains only to the businesses reporting the specific expense item. iherefore these ratios are calculated individually and the total will not necessarily equal 100\%.

\section*{Notes}

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.
Records were ranked in ascending order according to sales size. Each quartile (i.e. bottom 25\%, lower middle 25\%. etc.) represents one quarter of the total number of businesses. Hithin each quartile, the average ratio is presented. For, comparison purposes, the. high and low values of sales are shown.

\section*{How to use the tables}

11 Locate the appropriate sales range that is displayed on the two lines entitled "Low sales value? and wigh seles value".
(2) The selected range will indicate the proper quartile, i.e. the bottom 25\%. the lower midde 25\%, the upper middle \(25 \%\) or the
top 25\%.
(3) Data pertaining to the selected sales size range will be in that quartile.

\section*{Standard Industrial Classification Definition (SIC 1980):}
sic 6131-Women's Clothing Stores
Businesses primarily engaged in retail dealing in women's clothing lexcept athleticl and accessoriesi. Included are businesses engaged in etail women's clothing and accessories. retail women's apparel, retail women's clothing, retail women's coats, women's clothing custom' tailoring, retail dresses, retail women's dressing gowns, retail foundation garments, retail women's gloves, retail women's. headwear. retail women's hosiery, retail lingerie. retail millinery, retail women's neckwear. retail skirts, retail women's slacks end pants, retail women's sleepwear, retail women's sportswear lexcept athleticl, retail women's suits. retait women's sweaters. retail women's undergarments, retail women's uniforms lexcept athletiol and women's clothing stores.
