AUTOMOTIVE DEVELOPMENTS IN 1991

Continuing flat vehicle sales dominated the Canadian, and the North American automotive industry throughout 1991. A slight decline in Canadian sales (1.3 percent in passenger vehicles and 4 percent in trucks) was overshadowed by a larger decline in the U.S. market (12 percent in passenger cars and 9 percent in trucks) that affected Canadian production of vehicles and parts. Despite this market situation, the Canadian share of vehicle production rose to 17.5 percent of the total North American volume, although the value of vehicle exports remained stable.

As in 1990, some Canadian assembly plants experienced considerable downtime as excess capacity continued to plague the North American market, particularly for the *Big Three*. At the Sainte-Thérèse plant of General Motors, production was halted while preparations were made for the change-over to the new generation of *Camaro* and *Firebird*. At Chrysler, production continued at high levels for the minivan in Windsor, while the Bramalea plant continued to prepare for introduction of the LH series of vehicles in 1992.

Flat vehicle sales, especially for the *Big Three*, continued to affect the Canadian parts sector. Both production of parts and employment in the sector are estimated to have declined, although capital expenditures in the industry increased by more than 5 percent. Parts exports declined by more than 16 percent, reflecting the reduced demand by the *Big Three* in the U.S. Many companies in the sector continued to make improvements in productivity and quality, often

assisted by the Automotive Components Initiative, developed by Industry Science and Technology Canada (ISTC). A major turnaround was made by Magna International, where corporate adjustments led to a profitable year-end.

The Automotive Advisory Committee (AAC), reporting to the Minister of Industry, Science and Technology and Minister for International Trade continued to promote communication and cooperation among industry, labour and government. Major activities of the AAC included: continuing sectoral advice to the Minister for International Trade during negotiations for a North American Free Trade Agreement; the establishment of a committee to review the competitiveness of the Canadian automotive retail distribution system; and the firm establishment of the Automotive Parts Sector Training Council under the guidance of the Automotive Parts Manufacturers Association and the Canadian Autoworkers Union, with initial support of the federal and provincial governments.
