Directory of

Made in Canada

Health Care Products

Prepared by the Business Opportunities Sourcing System (BOSS) and the Health Care Products Division, Chemicals Branch, Department of Industry, Trade and Commerce. *LC Canada*

I am pleased to introduce the Directory of Made in Canada Health Care Products to members of the Canadian health care profession, and also to those engaged in the manufacture and distribution of products in this important sector.

The purpose of this publication, prepared by my department, is to facilitate sourcing of made in Canada health care products for the domestic and export markets. I hope that, by assisting purchasers to identify and take advantage of the well-established Canadian capabilities in this field, this directory will contribute to the further growth and development of a strong and competitive health care products industry in Canada.

I would like to acknowledge with thanks the assistance received from the officials of Health and Welfare Canada, the provincial departments of industry and the Canadian Association of Manufacturers of Medical Devices. Their co-operation and encouragement contributed greatly to the preparation of this directory.

Hon. Herb Gray
Minister of Industry, Trade and Commerce

Introduction

The Directory of Made in Canada Health Care Products is designed to provide purchasers of health care equipment and supplies with a comprehensive, easy reference guide to sources of made in Canada products. The information it contains on about 300 companies and approximately 1,500 products was obtained through a survey of all known manufacturers of health care products in Canada. Assistance was generously provided by the Bureau of Medical Devices, Health and Welfare Canada; the provincial departments of industry; and the Canadian Association of Manufacturers of Medical Devices.

The directory is distributed free of charge to Canadian health care institutions and the related professions, and will also be used by Canadian Trade Commissioners abroad to develop export markets.

Products and their manufacturers are listed in four sections. A fifth section provides further information on the companies and lists their products.

A simplified cross-reference system based on a classification of preferred names for health care products is used. Products are listed in a dictionary-like format, grouped under headings composed of keywords that also appear in the name of the products.

The letter [E] indicates that a product is available for export, but not always to all countries.

To find a specific item the reader should look in the relevant section of the directory for possible keywords that may form the preferred name of the product. If a product cannot be found in the most likely section, other likely sections should be consulted.

For example, *catheter, suction tracheobronchial* could be found in the Medical Devices section under keyword headings such as *catheter, suction, and tracheobronchial*.

A list of the keywords is provided at the beginning of the directory.

The product information contained in this directory was provided by the respondents to a questionnaire sent to all known manufacturers of health care products in Canada. Every effort has been made to contact all Canadian makers of health care products.

Companies that would like to be listed in future editions of this directory or that wish to update their present listing and readers with any other enquiries or comments about the publication should write to:
