# Canadian Equipment and Services for the Oil and Natural Gas Industries

In more than a quarter of a century since the first major Canadian petroleum discovery at Leduc, Alberta, Canadian companies have developed considerable expertise in engineering services and equipment manufacture for the petroleum industry. Today Canadian expertise and equipment rank among the finest in the world.

This directory is intended to provide the world's oil and gas industries with a detailed cross-reference to more than 2,500 products and services available from Canadian companies together with the addresses and key personnel of the companies concerned.

Further information on services and equipment from Canada may be obtained by writing to the firms themselves, contacting the nearest Canadian government trade office or by writing to:
