CONSUMER COMPLAINTS AND ENQUIRIES

PLAINTES ET DEMANDES DE RENSEIGNEMENTS DES CONSOMMATEURS

Department of consumer and corporate affairs / Ministère de la consommation et des corporations

## annual repori

## 1969

## rappori annuel

Department of consumer and corporate affairs/Ministère de la consommation et des corporations

This is the second Annual Report of Complaints and Enquiries, as prepared by the Consumer Service and Information Branch of the Bureau of Consumer Affairs.

Consumers have continued to present their complaints and problems to "The Consumer, Box 99, Ottawa" a mailing address which was established in 1968. The total of Complaints received in 1969 increased by $115 \%$ over the preceding year. 6,683 complaints were processed in 1969; 3109 in 1968; making a total of 9792 since the inception of Box 99.

The Consumer Service and Information Branch has met with manufacturers, trade associations, and service industries in an effort to resolve the areas of difficulty that exist relative to commodity and service purchasing. For the most part, the business community has been most helpful in resolving consumer complaints.

Cooperation with provincial agencies has been strengthened. The appointment, in the second half of 1969 , of Regional Consumer Consultants with headquarters in Halifax, Montreal, Toronto, Winnipeg and Vancouver has
increased the exchange of information between federal and provincial offices. Consumer Consultants have also been handling complaints and enquiries in their respective Regions. Their proximity to the complainant and their familiarity with regional problems add to the effectiveness of their role in this activity.

## Analysis

Appended to this report are the following Tables:

1. Complaints monthly by subject.*
2. Complaints monthly by category:*
3. 

(a) Complaints monthly by subject and category - 1969.
(b) Complaints monthly by subject and category - 1968-69.
4. Complaints monthly by subject and province.
5. Complaints monthly by category and province.

Brief comments are presented on the above tables after which a number of problem areas will be reviewed.

[^0]Table I Complaints monthly by subject

It is interesting to note that the three subjects which lead the statistical tabulation in 1969 are the same subjects and in the same order as in 1968. They are: Foods; Motor Vehicles and Accessories; Wearing Apparel. Real Estate-Housing and Appliances exchanged 4 th and 5th spots.

## Table II Complaints monthly by category

Prices again lead the list in total number of complaints, followed by quality, compensation, alleged unethical practices, and advertising. In 1968, guarantees and warranties was in fourth spot, but in 1969 it dropped to sixth place. In 1969 complaints against advertising increased by $140 \%$ over 1968. Alleged unethical practices which did not appear in the top five in 1968 and which occupies 3rd spot in 1969 includes complaints relative to fraud and deception, bait and switch, itinerant sales, referral sales, and attempted collection of non-owing accounts.

Basically this Table is self-explanatory. However, some examples will be given. Three hundred and thirty-three (333) complaints were received in 1969 concerning appliances. From this Table it will be seen that the largest number, 84 , referred to the quality of appliances, with repairs and servicing at 71 running a close second. Fifty-four (54) complaints were recorded on guarantees and warranties. Related to appliances, it is evident that consumers who write to Box 99 are not satisfied with (a) the quality; (b) repairs and servicing; and (c) guarantees and warranties.

Of the 622 complaints recorded in 1969 against motor vehicles and accessories, by far the largest number (164) concerned guarantees and warranties, with repairs and servicing (116) and quality (111) coming next. Guarantees and warranties will be discussed later in this report.

The above examples will illustrate the trends indicated in Table III.

With the exceptions of Prince Edward Island and Northwest Territories-Yukon, food complaints predominated from all provinces. In seven provinces, motor vehicles and accessories came second. Wearing Apparel complaints rank among the top five subjects of complaint in Quebec, Ontario, Saskatchewan, Alberta and British Columbia.

In 1969, Ontario produced the largest number of complaints, followed by British Columbia, Quebec, Alberta, Nova Scotia, and Saskatchewan.

Table V. Complaints monthly by category and province

While Newfoundland, Quebec, Ontario and British Columbia complained most often about prices, Nova Scotia, New Brunswick, Prince Edward Island, Manitoba, Saskatchewan and Alberta recorded the majority of their complaints about quality.

## Problem Areas

A review is presented of a number of problem areas that appeared to be significant, as indicated by Box 99 complaints.

Problems related to textiles and wearing apparel primarily fall under three headings: drycleaning; quality and wearability; care and fibre labeliing. Many problems relative to drycleaning and quality and wearability could have been avoided if adequate care and fibre information had been available to the consumer.

It is evident from the drycleaning complaints received at Box 99 that consumers do not always receive compensation for articles damaged at the drycleaners. While it is difficult, due to lack of care and fibre labelling, to determine the area of responsibility when problems arise as a result of drycleaning, it does seem that (1) an obvious need exists for greater understanding between the consumer and the drycleaning industry as to the responsibility of the latter; and (2) problems, that may be inherent in the garment, become known only during the cleaning process. The establishment of a mediation board authorized to arbitrate disputes between a customer and the drycleaning industry might well be a useful instrument for settling disputes. Such a committee already exists in Toronto.

From an analysis of complaints relative to quality and wearability of textiles and apparel, several problems are revealed: workmanship which results in poor fit and loss of shape; less than adequate stitching combined with poor-quality thread; fading, running and rubbing off of colour; zippers and fasteners which do not last; poor material used in pockets; and permanent press garments which are indeed not so. A number of complaints were related to imported garments where the consumer felt that the quality and workmanship were inferior and the sizes were not the same as with domes-tically-produced garments.

The lack of adequate care and fibre labelling has concerned Canadian consumers. It is obvious that a need exists for care and fibre identification labels to be permanently affixed to garments so that they will be available to the consumer and the drycleaner for the lifetime of the article.

A discussion of textiles and wearing apparel would be incomplete without mention of the flammability of materials. Unsuspected combustion involving garments
has been the subject of a number of complaints. The development of a standard that will reduce this hazard is being given high priority.

## Hazardous Products

In addition to the hazard of flammability, referred to above, other areas of concern are revealed by Box 99 letters. The largest area relates to the toxicity of products. Among the letters are those requesting a ban on the distribution of free samples of cleansing agents to residences. Other consumers request control of the retail sale of glue and nail polish remover. Still others express alarm over the use of toxic substances in toys.

A significant number of complaints related to sharp and piercing properties of toys, especially dolls and baby rattles. Other consumers were alarmed over the Zack of safety features in child "safety" harnesses, and the dangerous spacing of crib slats. One mother complained of the nylon mesh used in a child's playpen where a button on the little girl's dress caught in the mesh causing the child to choke.

A variety of products prompted consumers to write requesting regulations to enforce the use of a clearly-stated warning on containers of toxic substances.

In addition, consumers have written regarding life jackets, demanding that all manufactured life-jackets, both domestic and imported, meet government safety standards.

The Hazardous Products Regulations, which will be issued in the next few weeks, and the standards for toys and life jackets that are under development, will solve many of these problems.

Food Packaging and Labelling

Food packaging complaints, in 1969, totalled $64.3 \%$ of all packaging complaints. This constituted a rise of $16 \%$ over the preceding year. In $1968,6 \%$ of all food complaints involved packaging. In 1969, the figure rose to $18 \%$.

Food labelling complaints, in 1969, made up 60\% of all labelling complaints, a rise of $24 \%$ over 1968. Of all food complaints in 1969, 9\% were on food labelling; an increase of $4 \%$ over 1968.

Food Packaging and Labelling Complaints as Percentage of All Complaints on Packaging and Labelling

Food Packaging and Labelling Complaints as Percentage of All Food
Complaints

Complaints on food packaging reveal several major areas of concern: gimmicks in food packages; fancy packaging and slack-fill; proliferation of package sizes; allegedly deceptive packaging and vignettes.

Foods which were the main target of criticism relative to gimmicks were cereals, fruit dessert powders; dry beverages, and flour.

Complaints on fancy packaging and slack-fill run numerically at approximately the same rate as in 1968. Consumers expressed the opinion that fancy packaging contributes to an increase in cost for the product, sometimes accompanied by a decrease in package satisfaction. An example of this combination is a spice container where the design hampers the inserting of a measuring spoon. Slack-fill complaints involved, for the most part, foods such as cereals, potato chips and chocolate bars.

Closely related to fancy packaging are complaints that refer to the proliferation of package sizes.

Approximately 6 per cent of all food packaging complaints are recorded against the long-standing problem of aでegedly deceptive vignettes.

Complaints about alregedly deceptive packages include disapproval of the cardboard trays used in the packaging of meat because consumers feel that such a method of packaging often hides inferior portions from view.. A number of complaints are recorded on bacon where the purchaser complained of the quality being inferior to that of the slice shown by regulation.

Other points raised about food packaging include requests for special indicators to register whether or not a food has thawed; complaints against returnable plastic milk containers where the containers become pitted or have picked up odours from the storage of a product other than milk; packages that are hard to open and close; and the use of staples in closing packages.

Allegedly misleading advertising of foods through the media has accounted for a small number of complaints.

Food labelling complaints can be broken down into several specific areas. Consumers writing to Box 99 have requested the following improvements, whịch are listed below, not necessarily according to importance or volume of complaints received:

1: The elimination of fractional weights.
2. Complete listing of ingredients.
3. Elimination or clarification of cents-off deals.
4. Accurate labelling of cut-up poultry; for example, packages labelled chicken breasts should not contain neck or backbone:
5. Indication of the price per unit.
6. Datemarking, particularly of perishable foods.
7. Change in the nomenclature for grades of processed fruits and vegetables:

## Non-returnable Bottles

Of the total of complaints received on nonreturnable bottles in 1968 and 1969, the majority wanted outright banining of these bottles. The remainder drew attention to the litter problem, the hazard from breakage, and the lack of choice of container.

However, complaints received on non-returnable bottles dropped in 1969 by $87 \%$.

## Soaps and Detergents

More than a third, or $38 \%$, of the complaints on
household products have been on soaps and detergents.

$$
-14-
$$

The following table gives an approximate percentage breakdown of the subject matter of the complaints on soaps and detergents for 1969.

## Drug Products

Complaints on this subject can be classified under the following headings:

1. High price.
2. Canadian vs foreign prices.
3. Price variations from store to store.
4. Suggested free medication for pensioners.
5. Exaggerated claims of effectiveness of a product.
6. Slack-fill and container design.
7. Allergic reactions.

Guarantees and Warranties

In 1968, complaints on guarantees and warranties totalled slightly over $9 \%$ of the total. In 1969, only $5.5 \%$ of the total complaints related to guarantees and warranties.

Below are comparisons for 1968 and 1969 showing the percentage of guarantee and warranty complaints as related to the total complaints on motor vehicles and accessories; electrical and electronic equipment; and appliances.

COMPLAINTS ON GUARANTEES AND WARRANTIES
AS PERCENTAGE OF TOTAL COMPLAINTS

From the complaints recorded on guarantees and warranties, the following observations have been made:

1. In most guarantees, there always appears to be a grey area which is subject to misinterpretation and is the cause of disputes.
2. Warranty repair service is often inadequate and delayed.
3. Consumers often are not compensated for delayed or poor service.
4. Repair parts may not be available or not as good as original parts.
5. Excessive servicing required.
6. Purchasers encounter problems in rejecting defective goods and claiming a refund of purchase price.
7. Guarantor usually has final decision on application of warranty and is sole judge of the presence of defects in material or workmanship.
8. Guarantees often exclude components.
9. If guarantor stipulates that maintenance requirements must be performed by a specific dealership, charges may be excessive.
10. Often guarantees are not transferable to second owner.
11. Guarantee provisions are blown up and used as sales and advertising gimmicks.
12. Responsibility for predelivery inspection work is not covered by manufacturer's guarantee.
13. Clear and precise guarantee information is difficult to obtain prior to purchase.
14. Some guarantees are not honoured due to change of management, merger or bankruptcy.
15. The consumer should have recourse to an impartial board of appeal to review cases of refused guaranty claims.

Quality

It may be significant to note that in 1968, $13.5 \%$ of all complaints received by Box 99 had to do with product quality. In 1969, the percentage of complaints regarding quality rose to $17 \%$, with the quality of food and wearing apparel leading the list.

The responsibility of the Consumer Service and Information Branch extends beyond assistance in the resolution of individual complaints. While this function obviously is a necessary one, the recommendation of remedial measures must remain a foremost objective if abuses in the marketplace are to be corrected.

Many consumers have complained about the lack of fibre content labelling on wearing apparel and other textile articles. The Textile Labelling Bill recently Introduced in the Senate is designed to meet this problem.

Consumers have cited their individual problems relative to washing and cleaning garments and household textiles, where the absence of care instructions has caused disastrous results. The proposed Care Labelling System, about to be introduced, will help in this area of concern.

It should be noted that hazardous products, either in the form of toxic substances, dangerous toys, poorly designed children's furniture, and flammable fabrics, have been recorded as major problems. The Hazardous Products Act is now on the statute books and regulations are being drafted to control various hazards.

The Department of Consumer and Corporate Affairs is vigorously promoting the use of Canada Standard Sizes in the manufacture of children's clothing. Clothes manufactured to Canada Standards Sizes are designed to body measurements rather than age specifications, as formerly used. Parents are urged to ask retailers for CSS garments.

From complaints on packaging and labelling, the Consumer Service and Information Branch is able to report the views of consumers on these matters. Such representations are of significant value in any legislative proposal that may be forthcoming.

The areas cited provide examples of one use made of Box 99 complaints. In addition, analyses of complaints form the basis of representations to industry and trade associations, to indicate to the manufacturers where the problems exist, as reported through Box 99.

The letters received from consumers make up a valuable bank of consumer opinion, the impact of which is reflected in measures being taken to improve consumer protection in the marketplace.

## CONSUMER ENQUIRIES

$$
1969
$$

General

A continuing function of the Consumer Service and Information Branch is the answering of enquiries directed to the Bureau of Consumer Affairs and the Branch. Enquiries are distinguished from complaints in that they are requests for information rather that appeals for assistance or the registration of an alleged problem. While enquiries usually do not require the process of intercession that follows many complaints, often a considerable amount of research is needed to secure the information requested.

Enquiries are processed by the Information Division of the Branch. During the year, $1 ; 594$ enquiries were received and processed. This represents an increase of 66 per cent over 1968.

## What Do Consumers Enquire About?

More than 40 per cent of all enquiries fall into three subject areas: foods -17.25 per cent, Government
functions and services - 15.43 per cent, and publications 10.28 per cent.

In the food area, consumers write requesting information on the handling of food, e.g. recipes ranging from cooking fish to making wine, freezing foods, food grading, etc. They also enquire about ingredients in standardized foods, nutrition, and how to secure the most for their food dollar. Many of these enquiries are referred to other government departments that have specialists in these flelds. Food enquiries rose sharply over 1968. In fact they almost tripled.

Governmental functions and services prompted the second largest number of enquiries and were received at about the same rate as in 1968. In this area, consumers request information about the organization and function of the Department of Consumer and Corporate Affairs particulariy, and about consumer protective legislation in general. When answering such enquiries, it is often necessary to explain the jurisdictional positions of the various levels of government. Many enquiries are received from secondary school students who have been assigned projects involving consumer matters.

More than 10 per cent of enquiries are requests for publications on a wide range of topics. These enquiries are often general requests asking if certain publications exist and where publications on certain topics may be secured:

The fourth most frequent subject of enquiry is detergents and household products, representing 5.27 per cent of the total. The most popular topic is biodegradable detergents and their effect on water pollution.

The general subject of finance attracted 5.2 per cent of the enquiries which range from the subject of credit cards to cost-of-living surveys and family money management.

Wearing apparel accounted for 4.45 per cent of enquiries with fibre content labelling, care of garments, and standardization of sizes being the subjects of most questions.

The following subjects each attracted between 3 and 4 per cent of the total enquiries: electrical and electronic equipment, motor vehicles and accessories, appliances, textiles, and education. In most of these cases, the consumer requested information on the performance
or quality of certain commodities. While the Division. cannot put itself in the position of recommending one manufacturer'ṣ product or another, references containing the desired information are sought out and passed on to the consumer to assist him to be more knowledgeable in his selection of purchases.

The remaining 25 per cent of the enquiries are divided in decreasing numbers among 14 other general subject areas and miscellaneous. These subjects and the numbers of enquiries involved are presented in Table VI, entitled Consumer Enquiries, accompanying this report.

A general examination of categories into which enquiries fall is not as significant as in the case of complaints, since they do not represent problem areas. Enquiries reflect the curiosity of consumers on some specific subject. These general areas of curiosity were expressed in the following order of frequency: prices, quality, labelling, safety, standardization, alleged unethical practices, advertising, repairs and servicing, compensation, and guarantees and warranties. A substantial number are categorized as miscellaneous because they cover an extremely broad number of individual subjects.

## Conclusion

In the 1968 Annual Report, it was observed that enquiries fall into two general areas of consumer interest:
(1) Enquiries regarding consumer goods, services, and practices initiated by consumers in their own self-interest, i.e. for the purpose of gaining advantage in their own dealings in the marketplace and with business.
(2) Enquiries regarding the responsibilities and operation of various governments, and the availability of legislation, regulations and information which affect the consumer interest.

The 1969 consumer enquiries confirm this observation.
