	Seed, stalk and fiber, root, grain derivatives containing <10µg/g THC	These parts of the industrial hemp plant can be sold to anyone												

¹ Any cannabis sold to a Sale for Medical Purposes licence holder or a Provincially- or territorially- authorized retail seller must be packaged and labelled according to Section 106 of the *Cannabis Regulations*. All other cannabis sold intra-industry can be sold according to Sections 106 or 137 and 138.

² One organization can have more than one class of federal licence at the same site, with some exceptions. Authorized activities are subject to conditions on licence.

³ Must be packaged and labelled according to Section 106 of the *Cannabis Regulations*.

⁴ 'Other cannabis' covers forms of cannabis outside of the defined product classes, such as cannabis extracts.

⁵ A reference standard is a highly purified form of cannabis used to test the chemical characterization of cannabis, such as strength, quality and purity.

⁶ A test kit is used to test for the presence or quantity of cannabis. The cannabis in a test kit is denatured or altered in a way to make it unsuitable for consumption by humans.

⁷ The sale of a drug containing cannabis is not permitted for any licence holder except a Cannabis Drug Licence holder. These drugs are further regulated under the *Food and Drugs Act* and have additional regulatory requirements. Distribution of a drug containing cannabis is permitted for Research licence holders.

⁸ No industrial hemp license holder can process industrial hemp flowers, leaves, or branches (e.g., produce cannabidiol). Such activities would require a cannabis processing licence.
