Re-evaluation Decision

Under the authority of the *Pest Control Products Act*, all registered pesticides must be regularly re-evaluated by Health Canada's Pest Management Regulatory Agency (PMRA) to ensure that they continue to meet current health and environmental safety standards and continue to have value. The re-evaluation considers data and information from pesticide manufacturers, published scientific reports, and other regulatory agencies. The PMRA applies internationally accepted risk assessment methods as well as current risk management approaches and policies.

Fluroxypyr is a post-emergent herbicide that offers control of annual broadleaved weeds in small grain cereals, rangeland, permanent pasture, industrial and other non-cropland areas. It is applied with both ground and aerial equipment. Currently registered products containing fluroxypyr are listed in Appendix I.

This document summarizes the final regulatory decision¹ of fluroxypyr, and all pest control products containing fluroxypyr registered in Canada are subject to this final re-evaluation decision. Prior to finalizing this decision, Health Canada published the Proposed Re-evaluation Decision PRVD2017-11, *Fluroxypyr (present as ester) and Its Associated End-use Products*, for a 90-day consultation.² One comment was received during the consultation process, and it was taken into consideration for this final regulatory decision. The comment did not result in changes to the proposed decision of fluroxypyr. Therefore, this final decision is consistent with the proposed re-evaluation decision stated in PRVD2017-11. Appendix II of this document summarizes the comment received during consultation period and provides the PMRA's response.

A reference list of all data used as the basis for the re-evaluation decision is included in Appendix IV.

Outcome of Science Evaluation

Health risks from the use of fluroxypyr and its associated end-use products have been shown to be acceptable for all uses, when used according to current label directions. The environmental risks associated with the use of fluroxypyr and its associated end-use products are considered to be acceptable when used according to the revised label directions (updated buffer zones). Fluroxypyr has value with respect to weed management program for cereal (wheat, barley, and oats) and seed production of forage grasses, and for the management of pasture, rangeland, and industrial non-crop areas.

Regulatory Decision for Fluroxypyr

Health Canada has completed the re-evaluation of fluroxypyr. Under the authority of the *Pest Control Products Act*, Health Canada has determined that continued registration of products containing fluroxypyr is considered to be acceptable. An evaluation of available scientific information found that uses of fluroxypyr products meet current standards for protection of

¹ "Decision statement" as required by subsection 28(5) of the *Pest Control Products Act*.

² "Consultation statement" as required by subsection 28(2) of the *Pest Control Products Act*.

human health and/or the environment when used according to the conditions of registration, which include the required label updates summarized below. Refer to Appendix III for details.

Human Health Label Updates

- Updated restricted-entry interval; and
- Updated label statements to minimize bystander exposure from spray drift.

Environmental Label Updates

- Updated buffer zones;
- Updated environmental hazard label statements; and
- Updated storage label statements.

Next Steps

To comply with this decision, the required label updates must be implemented on all product labels sold by registrants no later than 24 months after the publication date of this decision document. Products containing fluroxypyr that are registered under the authority of the *Pest Control Products Act* are listed in Appendix I.

Other Information

Any person may file a notice of objection³ regarding this decision on fluroxypyr within 60 days from the date of publication of this re-evaluation decision. For more information regarding the basis for objecting (which must be based on scientific grounds), please refer to the Pesticides section of Canada.ca (Request a Reconsideration of Decision) or contact the PMRA's Pest Management Information Service.

³ As per subsection 35(1) of the *Pest Control Products Act*

Appendix I Registered Fluroxypyr Products as of October 2018

Registration Number	Marketing Class	Registrant	Product Name	Formulation	Guarantee
24815	Commercial	Dow AgroSciences Inc.	STARANE HERBICIDE	Emulsifiable Concentrate	Fluroxypyr - 180 g a.e./L
24834	Commercial	Dow AgroSciences Inc.	ATTAIN A HERBICIDE	Emulsifiable Concentrate	Fluroxypyr - 180 g a.e./L
25465	Commercial	Dow AgroSciences Inc.	PRESTIGE A	Emulsifiable Concentrate	Fluroxypyr - 180 g a.e./L
27246	Commercial	Dow AgroSciences Inc.	TROPHY A EMULSIFIABLE CONCENTRATE HERBICIDE	Emulsifiable Concentrate	Fluroxypyr - 180 g a.e./L
28537	Commercial	Dow AgroSciences Inc.	BASELINE B HERBICIDE	Emulsifiable Concentrate	Fluroxypyr - 180 g a.e./L
29286	Commercial	Dow AgroSciences Inc.	GF-184 HERBICIDE	Suspension	Florasulam - 2.5 g/L Fluroxypyr - 100 g a.e./L
29450	Commercial	Syngenta Canada Inc.	PULSAR HERBICIDE	Emulsifiable Concentrate	Fluroxypyr - 113.3 g a.e./L Dicamba - 86.9 g/L
29462	Commercial	Dow AgroSciences Inc.	PRESTIGE XC A HERBICIDE	Emulsifiable Concentrate	Fluroxypyr - 333 g a.e./L
29463	Commercial	Dow AgroSciences Inc.	STARANE II HERBICIDE	Emulsifiable Concentrate	Fluroxypyr - 333 g a.e./L
29557	Commercial	Dow AgroSciences Inc.	RETAIN B HERBICIDE	Emulsifiable Concentrate	Fluroxypyr - 180 g a.e./L

* IMEP (import for manufacture of exported product): To be used only in the manufacture (formulating, repackaging, repouring) of a pest control product solely for export from Canada. Not subject to re-evaluation.

a.e. – acid equivalent

Appendix II Comments and Responses

The PMRA received the following comment relating to the Proposed Re-evaluation Decision PRVD2017-11, *Fluroxypyr (present as ester) and Its Associated End-use Products*. The comment received is presented below, in conjunction with the PMRA response.

Comment Related to Restricted-Entry Interval (REI) Language

Comment

The comment supported the requirement of a 12-hour REI for crop uses and requested that the PMRA maintain the current REI of “Until sprays have dried” for all non-crop uses.

PMRA Response

The PMRA agrees with the comment and clarifies the REI requirement for crop (12-hour REI) and non-crop uses (until sprays have dried). The amended label statements are included in Appendix III.

Appendix III Revised Label Amendments for End-use Products Containing Fluroxypyr

The label amendments presented below do not include all label requirements for individual end-use products, such as first aid statements, disposal statements, precautionary statements, and supplementary protective equipment. Information on labels of currently registered products should not be removed unless it contradicts the label statements provided below.

- I) Under **PRECAUTIONS**, the following statements must be included:

“For agricultural/crop scenarios: Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 12-hours. **For non-crop areas: Do not** enter or allow worker entry into treated areas until sprays have dried.”

“DO not use in residential areas. Residential areas are defined as any use site where bystanders, including children, could be exposed during or after application. This includes homes, schools, parks, playgrounds, playing fields, public buildings, or any other area where the general public, including children, could be exposed.”

“Apply only when the potential for drift to areas of human habitation or areas of human activity such as houses, cottages, schools and recreational areas is minimal. Take into consideration wind speed, wind direction, temperature inversions, application equipment and sprayer settings.”

- II) The following statements must be included in a section entitled **ENVIRONMENTAL PRECAUTIONS**:

“**TOXIC** to non-target terrestrial plants and aquatic organisms. Observe buffer zones specified under **DIRECTIONS FOR USE**.”

“To reduce runoff from treated areas into aquatic habitats avoid application to areas with a moderate to steep slope, compacted soil, or clay.”

“Avoid application when heavy rain is forecast.”

“Contamination of aquatic areas as a result of runoff may be reduced by including a vegetative strip between the treated area and the edge of the water body.”

- III) For products containing aromatic petroleum distillates, the following statement must be included in a section entitled **ENVIRONMENTAL PRECAUTIONS**:

“This product contains (an) active ingredient(s) and aromatic petroleum distillate(s) which are toxic to aquatic organisms.”

- IV) In a section entitled **STORAGE**, the following must be removed:

“Do not contaminate food, feedstuffs or domestic water supplies.”

- V) The following statement must be included in a section entitled **STORAGE**:

“To prevent contamination, store this product away from food or feed.”

VI) The following statements must be included in a section entitled **DIRECTIONS FOR USE:**

“As this product is not registered for the control of pests in aquatic systems, **DO NOT** use to control aquatic pests.”

“**DO NOT** contaminate irrigation or drinking water supplies or aquatic habitats by cleaning of equipment or disposal of wastes.”

VII) The following **buffer zone statements** must be included on the label:

Buffer Zone Related Label Statements Required for End-Use Product ARY 0548-019 Herbicide (PCP# 30580):

Add to DIRECTIONS FOR USE:

Field sprayer application: **DO NOT** apply during periods of dead calm. Avoid application of this product when winds are gusty. **DO NOT** apply with spray droplets smaller than the American Society of Agricultural Engineers (ASAE S572.1) coarse classification. Boom height must be 60 cm or less above the crop or ground.

DO NOT apply by air.

Buffer zones:

Spot treatments using hand-held equipment **DO NOT** require a buffer zone.

The buffer zones specified in the table below are required between the point of direct application and the closest downwind edge of sensitive terrestrial habitats (such as grasslands, forested areas, shelter belts, woodlots, hedgerows, riparian areas and shrublands), sensitive freshwater habitats (such as lakes, rivers, sloughs, ponds, prairie potholes, creeks, marshes, streams, reservoirs and wetlands) and estuarine/marine habitats.

Method of application	Crop	Buffer Zones (metres) Required for the Protection of:				
		Freshwater Habitat of Depths:		Estuarine/Marine Habitats of Depths:		Terrestrial habitat
		Less than 1 m	Greater than 1 m	Less than 1 m	Greater than 1 m	
Field sprayer	Spring wheat (including durum wheat)	1	0	1	1	3

For tank mixes, consult the labels of the tank-mix partners and observe the largest (most restrictive) buffer zone of the products involved in the tank mixture and apply using the coarsest spray (ASAE) category indicated on the labels for those tank mix partners.

The buffer zones for this product can be modified based on weather conditions and spray equipment configuration by accessing the [Buffer Zone Calculator](#) on the Pesticides section of the Canada.ca website.

Buffer Zone Related Label Statements Required for Fluroxypyr End-Use Products Requiring Applications with Spray Droplets of ASAE Coarse Classification (except for PCP# 30580):

Add to DIRECTIONS FOR USE:

Field sprayer application: **DO NOT** apply during periods of dead calm. Avoid application of this product when winds are gusty. **DO NOT** apply with spray droplets smaller than the American Society of Agricultural Engineers (ASAE S572.1) coarse classification. Boom height must be 60 cm or less above the crop or ground.

Aerial application: **DO NOT** apply during periods of dead calm. Avoid application of this product when winds are gusty. **DO NOT** apply when wind speed is greater than 16 km/h at flying height at the site of application. **DO NOT** apply with spray droplets smaller than the American Society of Agricultural Engineers (ASAE S572.1) coarse classification. To reduce drift caused by turbulent wingtip vortices, the nozzle distribution along the spray boom length **MUST NOT** exceed 65% of the wing- or rotorspan.

Buffer zones:

Spot treatments using hand-held equipment **DO NOT** require a buffer zone.

The buffer zones specified in the table below are required between the point of direct application and the closest downwind edge of sensitive terrestrial habitats (such as grasslands, forested areas, shelter belts, woodlots, hedgerows, riparian areas and shrublands), sensitive freshwater habitats (such as lakes, rivers, sloughs, ponds, prairie potholes, creeks, marshes, streams, reservoirs and wetlands) and estuarine/marine habitats.

Method of application	Crop		Buffer Zones (metres) Required for the Protection of:				
			Freshwater Habitat of Depths:		Estuarine/Marine Habitats of Depths:		Terrestrial habitat
			Less than 1 m	Greater than 1 m	Less than 1 m	Greater than 1 m	
Field sprayer	Spring wheat, durum wheat, winter wheat, spring barley, oats, seedling and established fescue and forage grasses for seed, canary seed, foxtail millet		1	0	1	1	1
Aerial	Wheat, barley, oats, canary seed	Fixed wing	4	0	1	1	70
		Rotary wing	1	0	1	1	55

For tank mixes, consult the labels of the tank-mix partners and observe the largest (most restrictive) buffer zone of the products involved in the tank mixture and apply using the coarsest spray (ASAE) category indicated on the labels for those tank mix partners.

The buffer zones for this product can be modified based on weather conditions and spray equipment configuration by accessing the [Buffer Zone Calculator](#) on the Pesticides portion of the Canada.ca website.

Buffer Zone Related Label Statements Required for Fluroxypyr End-Use Products Requiring Applications with Spray Droplets of ASAE Medium Classification:

Add to DIRECTIONS FOR USE:

Field sprayer application: **DO NOT** apply during periods of dead calm. Avoid application of this product when winds are gusty. **DO NOT** apply with spray droplets smaller than the American Society of Agricultural Engineers (ASAE S572.1) medium classification. Boom height must be 60 cm or less above the crop or ground.

Aerial application: **DO NOT** apply during periods of dead calm. Avoid application of this product when winds are gusty. **DO NOT** apply when wind speed is greater than 16 km/h at flying height at the site of application. **DO NOT** apply with spray droplets smaller than the American Society of Agricultural Engineers (ASAE S572.1) medium classification. To reduce drift caused by turbulent wingtip vortices, the nozzle distribution along the spray boom length **MUST NOT** exceed 65% of the wing- or rotorspan.

Buffer zones:

Spot treatments using hand-held equipment **DO NOT** require a buffer zone.

For application to rights-of-way, buffer zones for protection of sensitive terrestrial habitats are not required; however, the best available application strategies that minimize off-site drift, including meteorological conditions (for example, wind direction, low wind speed) and spray equipment (for example, coarse droplet sizes, minimizing height above canopy), should be used. However, applicators must observe the specified buffer zones for protection of sensitive aquatic habitats.

The buffer zones specified in the table below are required between the point of direct application and the closest downwind edge of sensitive terrestrial habitats (such as grasslands, forested areas, shelter belts, woodlots, hedgerows, riparian areas and shrublands), sensitive freshwater habitats (such as lakes, rivers, sloughs, ponds, prairie potholes, creeks, marshes, streams, reservoirs and wetlands) and estuarine/marine habitats.

Method of application	Crop		Buffer Zones (metres) Required for the Protection of:				
			Freshwater Habitat of Depths:		Estuarine/Marine Habitats of Depths:		Terrestrial habitat
			Less than 1 m	Greater than 1 m	Less than 1 m	Greater than 1 m	
Field sprayer	Spring wheat, durum wheat, winter wheat, spring barley, oats, seedling and established fescue and forage grasses for seed, canary seed, foxtail millet, new & established grass pastures		1	0	1	1	3
	Permanent pasture, rangeland, industrial areas, other non-crop areas		1	1	1	1	5*
Aerial	Wheat, barley, oats	Fixed wing	5	0	1	1	95
		Rotary wing	3	0	1	1	80

* Buffer zones for the protection of terrestrial habitats are not required for use on rights-of-way including railroad ballast, rail and hydro rights-of-way, utility easements, roads, and training grounds and firing ranges on military bases.

For tank mixes, consult the labels of the tank-mix partners and observe the largest (most restrictive) buffer zone of the products involved in the tank mixture and apply using the coarsest spray (ASAE) category indicated on the labels for those tank mix partners.

The buffer zones for this product can be modified based on weather conditions and spray equipment configuration by accessing the [Buffer Zone Calculator](#) on the Pesticides portion of the Canada.ca website.
