ANNUAL REPORT ON FIELD CROPS OF CANADA, 1925.

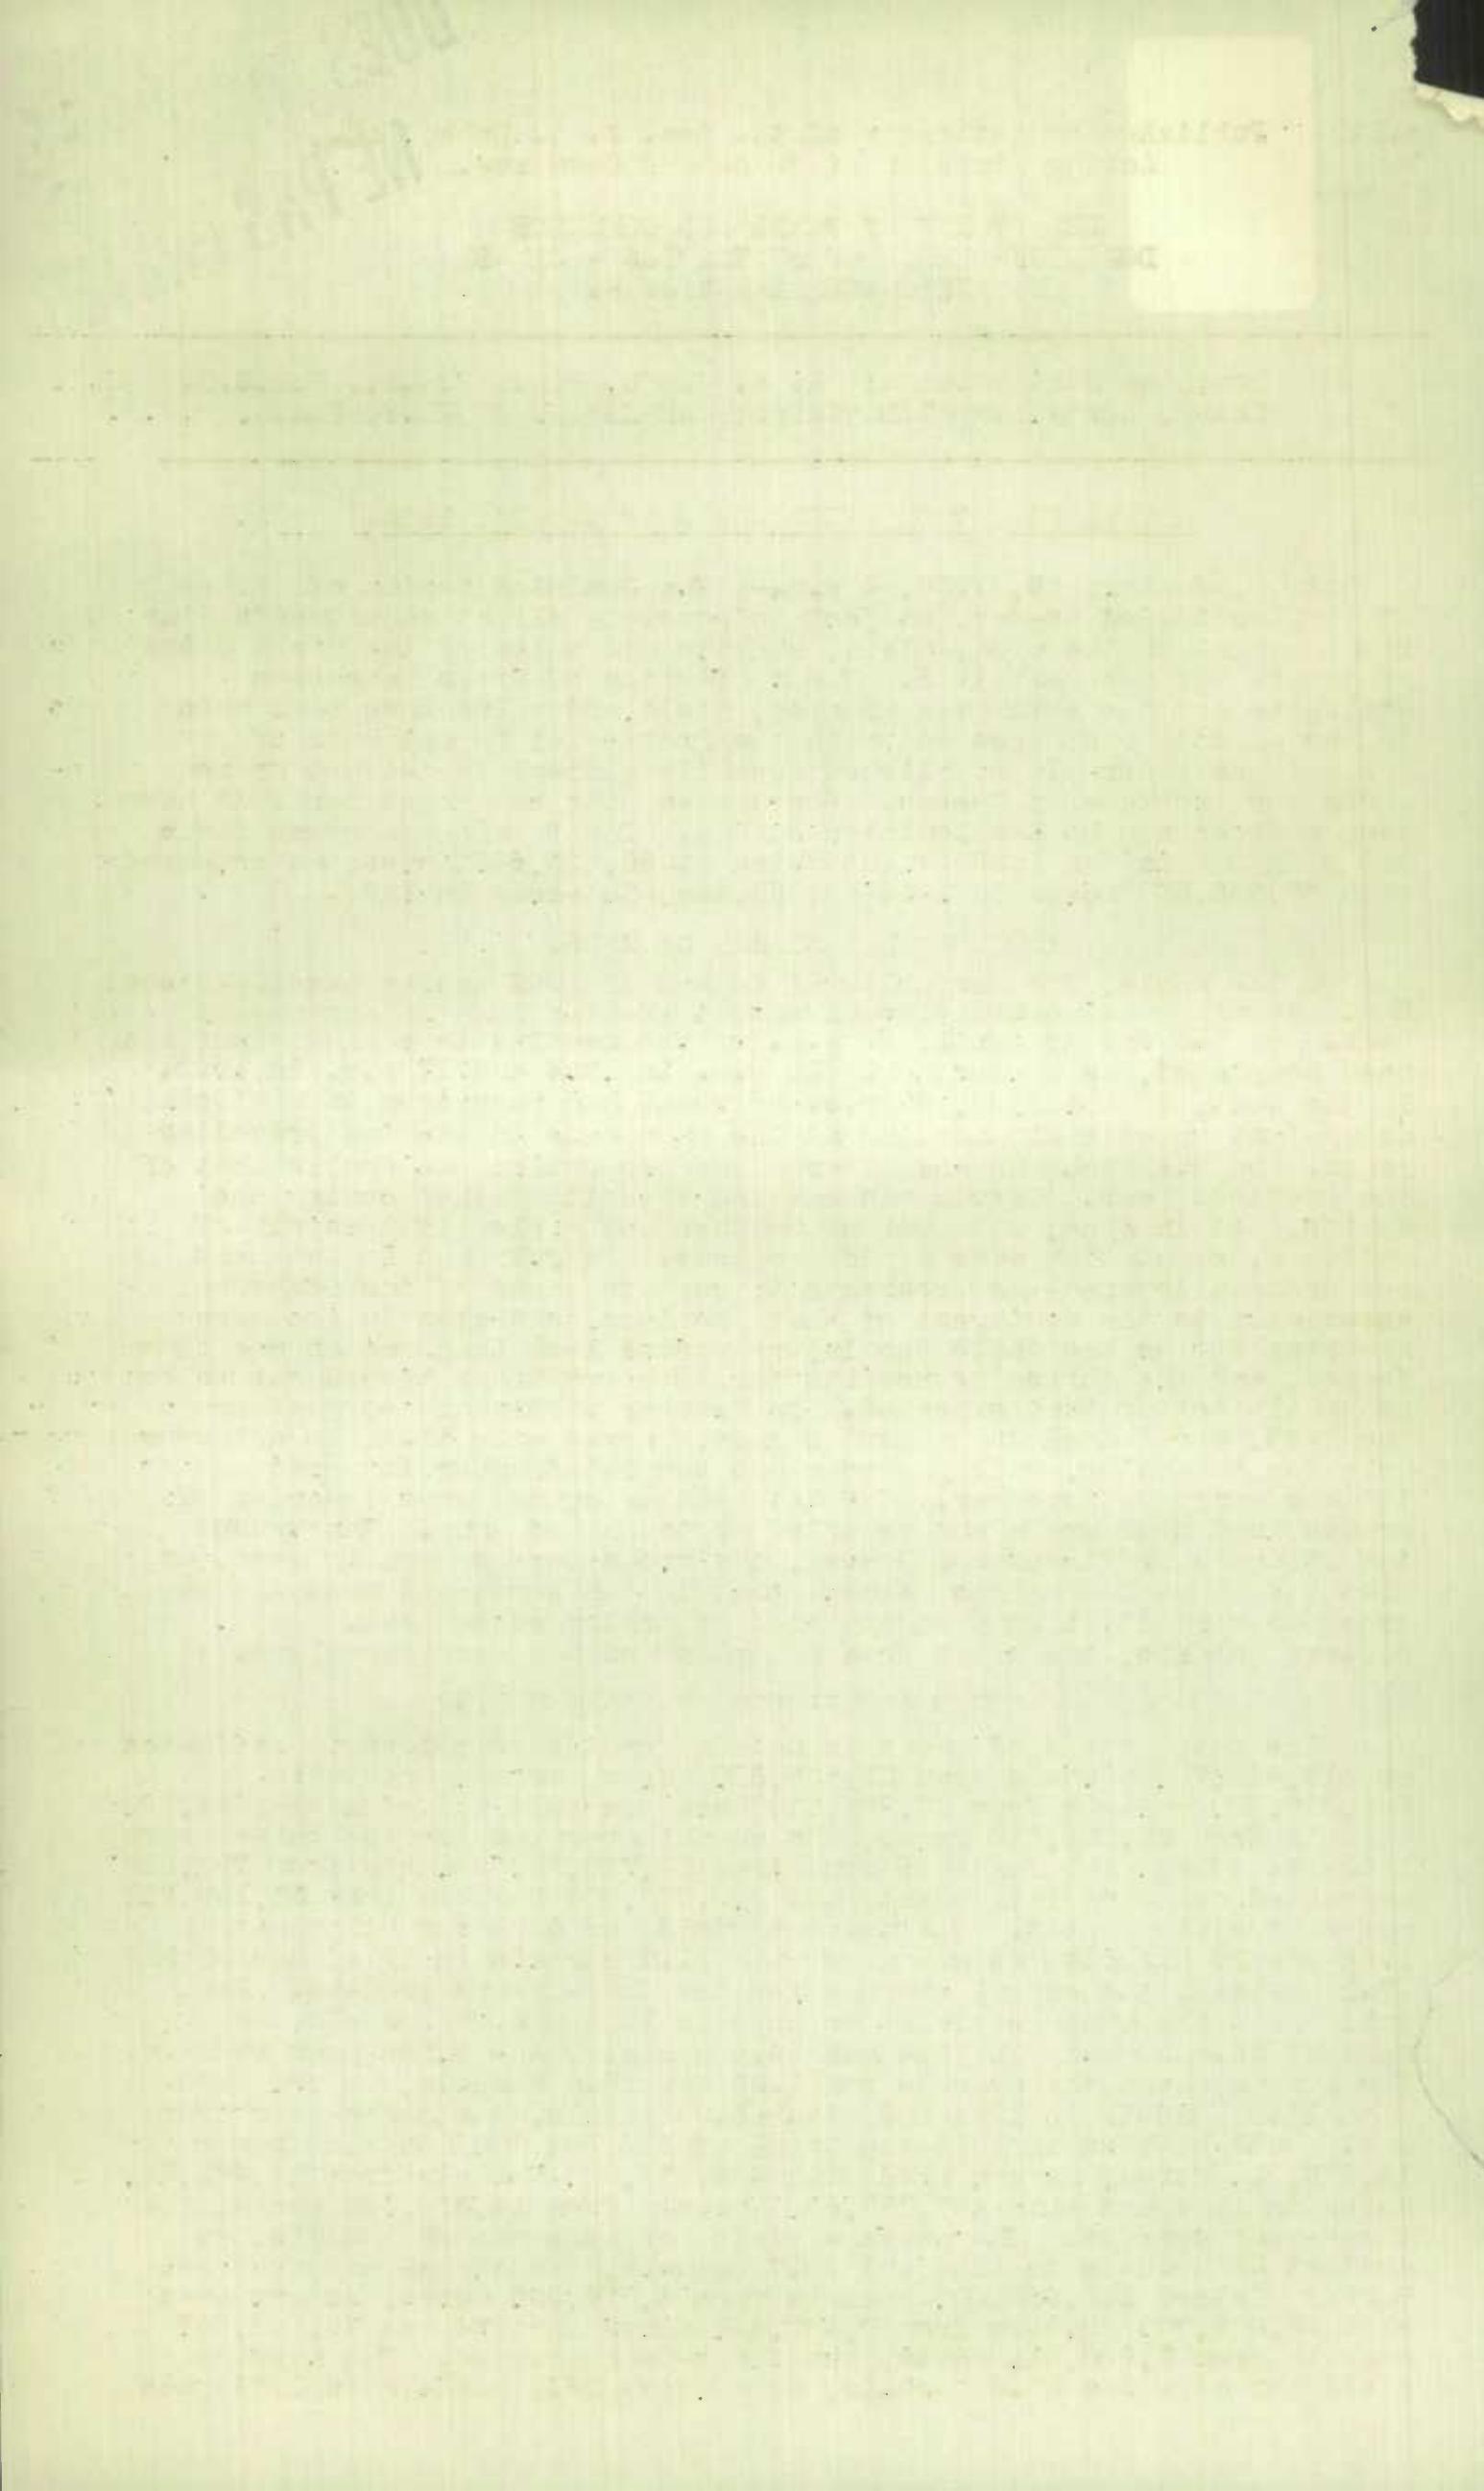

Ottawa, January 25, 1926, 4 p.m.- The Dominion Bureau of Statistics issued to-day, subject to possible slight adjustments, the final report on the area, yield, quality and value of the field crops of Canada for the year 1925. The statistics of areas have been collected and the estimates of area, yield and value have been made in cooperation and agreement with the Provincial Departments of Agriculture under plans followed annually since 1918, except as regards the province of Quebec. For Quebec, the estimates for 1925 have been made solely by the Dominion Bureau. The total area under field crops in Canada for 1925 is estimated at 58,225,465 acres, as compared with 57,852,550 acres in 1924 and 56,444,816 acres in 1923.

AGRICULTURAL SEASON OF 1925.

On the whole, the agricultural season of 1925 was an excellent one. Early seeding was possible to an extent greater than in any recent year. By the end of April, 33 p.c. of the seeding to spring wheat had been completed, as against only 12 p.c. in 1924 and 17 p.c. in 1923. In the West, by April 30, 60 p.c. of wheat had been sown in Manitoba, as against practically nothing at the same date in the two preceding years. In Saskatchewan and Alberta the proportion was double that of the previous year. Growth was checked by cold weather during the spring, but in June, with warmer weather and a plentiful supply of moisture, vegetation made rapid progress. In July and August heat and drought lowered the prospects in certain parts of Saskatchewan, especially to the southwest of that province, and also in southern Alberta; but on the whole the injury proved less than was at one time feared, and the threshing results for both provinces turned out to be generally better than expected. In October continual wet weather in the West, and indeed throughout Canada, proved exceptionally unfavourable for threshing, which however was completed under improved conditions early in November. The wet weather caused some lowering of grades, and much grain was reported as tough and damp. Throughout the Atlantic Provinces and Quebec, the crops were generally good, as also they were in Ontario, except that in the south and west the hay crop was very light as a consequence of prolonged drought. In eastern Ontario, the crops both of grain and hay were excellent.

AREAS AND YIELDS OF GRAIN CROPS.

The total yield of wheat in Canada for the year 1925 is estimated at 416,849,700 bushels from 21,957,550 acres, as compared with 262,097,000 bushels from 22,055,710 acres in 1924 and with 378,694,133 bushels from 22,121,516 acres, the annual averages for the three years 1922-24. The total for 1925 com rises 23,779,700 bushels from 793,819 harvested acres of fall wheat, and 393,070,000 bushels from 21,163,711 acres of spring wheat. The average yield per acre for all wheat in 1925 was 19 bushels, as compared with 11.9 bushels in 1924, and with 17.1 bushels, the annual average for the three years 1922-24. For fall wheat the average yield per acre in 1925 was 30 bushels, as against 28.8 bushels in 1924 and 24.4 bushels, the three-year average. For spring wheat the average for 1925 was 18.6 bushels, as compared with 11.3 bushels in 1924 and with 16.8 bushels, the three-year average. Oats yielded in 1925 the total of 513,584,000 bushels from 14,672,320 acres, as compared with 405,976,000 bushels from 14,491,289 acres in 1924 and with 487,070,855 bushels from 14,473,442 acres, the three-year average. The average yield per acre was 35 bushels, as against 28 bushels in 1924 and 33.7 bushels, the three-year average. Barley yielded 112,568,300 bushels from 4,075,995 acres, as compared with 88,807,000 bushels from 3,407,441 acres in 1924 and 79,225,367 bushels from 2,930,511 acres, the three-year average. The average yield per acre was 27.6 bushels, as against 26.1 bushels in 1924, and

27 bushels, the three-year average. Flaxseed totalled 9,297,109 bushels from 1,128,100 acres in 1925, as compared with 9,694,700 bushels from 1,276,667 acres in 1924, and with 7,289,900 bushels from 824,026 acres, the three-year average. The yield per acre was 8.2 bushels for 1925, as against 7.6 bushels in 1924 and 8.8 bushels, the three-year average. For the remaining cereal crops the total yields for 1925 were in bushels as follows, the corresponding totals for 1924 and for the three-year average being shown within brackets: Rye 13,688,500 (13,750,900; 23,118,700); rye 3,410,700 (3,239,900; 3,102,753); beans 1,500,700 (1,194,100; 1,179,700); buckwheat 10,448,800 (11,412,000; 10,285,633); mixed grains 54,301,000 (31,995,000; 29,817,753); and corn for husking 10,564,300 (11,998,000; 15,134,667).

The total yield of wheat now estimated, viz., 416,849,700 bushels, is the second largest on record for Canada, the previous highest total having been 474,199,000 bushels in 1923. Other high records were 399,786,400 bushels in 1922, 300,856,100 bushels in 1921, and 395,542,600 bushels in 1915. For oats, the total of 513,384,000 bushels has only twice been exceeded, viz., in 1923, 563,997,500 bushels, and in 1920, 530,709,700 bushels. The yield of barley, viz., 112,668,500 bushels constitutes a record, and compares with 88,807,000 bushels, the previous record of 1924.
