PREFACE

The accompanying tables represent the most current information available at the time of printing on fruit and vegetable production in Canada for 1975, 1976 and 1977. The 1975 and 1976 data are subject to revision, while the 1977 figures are forecasts. Estimates are provided in both imperial and metric units. The word "tonnes" indicates metric tonnes.

Vegetables

Data for the main processing crops are collected in three processor surveys - Intentions to contract, Contracted and Harvested acreage, production (purchases) and value. The term "acreage contracted" includes crops grown by farmers under contract to processors as well as crops grown on land owned or rented by processors.

Vegetable questionnaires are mailed to all farmers who produce vegetables for sale in the provinces for which statistics are published in this report. There are two Statistics Canada questionnaires: the first one, mailed during the latter part of July, is designed to obtain information on the acreage of vegetables, and the second, mailed about the middle of November, procures information on yields and prices. The results of these surveys form the basis of the estimates with the final figures being prepared in consultation with representatives of Federal and Provincial Departments of Agriculture. Statistics on greenhouse vegetable production are obtained from a survey of the Greenhouse Industry.

Data collection procedures for potatoes vary to some extent from those of the other vegetables. A survey of farmers' intentions to plant potatoes is conducted in March. Preliminary acreage figures are produced by a July 1st survey. Estimates of production are derived from these preliminary acreage data and yield surveys conducted in the Provinces in September and October. Revisions to these data will occur upon completion of the subsequent survey. The potato production figures represent total production (field run). To obtain marketable potatoes, the user must exclude estimates for cullage, spoilage and waste.

Only vegetable crops grown commercially are included; no data are available on vegetables grown for home consumption. All value data refers to the "farm gate value" or value received by the farmer.

Fruits

Commercial crop estimates presented in this report refer to marketed fruit only. The 1977 production forecasts are based on conditions as reported to Statistics Canada at time of publication.

PRÉFACE

Les tableaux ci-joints représentent les derniers renseignements disponibles au moment de l'impression et portent sur la production de fruits et de légumes au Canada en 1975, 1976 et 1977. Les données de 1975 et 1976 sont sujettes à révision tandis que les données de 1977 sont des estimations. Les estimations sont exprimées en unités impériales et métriques. Le mot "tonne" représente la tonne métrique.

Légumes

Les données sur les principales cultures de conserve sont recueillies au moyen de trois enquêtes sur les conditionneurs - Intentions de prendre contrat, Cultures sous contrat et Superficies récoltées, production (achats) et valeur. L'expression "superficie sous contrat" désigne aussi bien les récoltes produites par les agriculteurs sous contrat avec des entreprises que les récoltes provenant des terres possédées ou louées par les entreprises de transformation.

Les questionnaires sur les légumes sont envoyés par la poste à tous les cultivateurs qui produisent des légumes pour la vente dans les provinces sur lesquelles portent les statistiques présentées dans ce rapport. Statistique Canada produit deux questionnaires: le premier, qui est envoyé pendant la seconde moitié de juillet, vise à obtenir des données sur la superficie des cultures de légumes; le second, que l'on envoie vers la mi-novembre, recueille des renseignements sur les rendements et les prix. Les résultats de ces enquêtes servent de base aux estimations, les données définitives étant préparées en consultation avec des représentants des ministères fédéral et provinciaux de l'Agriculture. Des statistiques portant sur la production de légumes de serre sont obtenues à partir d'une enquête sur l'industrie de la culture de serre.

Les méthodes de collecte de données sur les pommes de terre diffèrent dans une certaine mesure de celles utilisées pour les autres légumes. En mars, on procède à une enquête portant sur la superficie projetée de culture des pommes de terre. Des données provisoires sur les superficies sont produites par une enquête menée le 1^{er} juillet. Les estimations de la production sont tirées de ces données provisoires sur les superficies et des enquêtes sur les rendements menées dans les provinces en septembre et octobre. La révision de ces données a lieu lors de l'enquête subséquente. Les chiffres sur la production de pommes de terre représentent la production totale (récolte brute). Pour obtenir les données sur les pommes de terre commercialisables, l'utilisateur doit exclure les estimations les rejets, des pertes et des déchets.

Seules les cultures commerciales de légumes sont prises en compte; aucune donnée n'est recueillie sur les légumes destinés à l'autoconsommation. Tous les renseignements sur la valeur se réfèrent à la "valeur à la ferme" ou valeur reçue par le cultivateur.

Fruits

Les estimations des cultures commerciales présentées dans ce rapport se rapportent uniquement aux fruits vendus. Les estimations de la production de 1977 sont fondées sur les conditions signées à Statistique Canada au moment de la publication.

Farm value data represent an estimate of returns to the grower from fruit crop sales, both processing and fresh market. Federal subsidies are included in the farm value shown. The supplement published in November entitled "Estimated Sales of Fruit to Processors" breaks out the quantity and value of the major processed fruit crops.

The 1976 value data and all 1977 fruit crop estimates should be regarded as preliminary and subject to revision. The data are prepared in consultation with Provincial and Federal Departments of Agriculture in the various fruit growing areas.

Brief reports of growing conditions across Canada will be published monthly during the summer. A summary of growing conditions and crop productions for the entire 1977 season will be contained in the January, 1978 publication.

Note: For the Maritimes and Quebec, the fruit estimates secured by Statistics Canada were stated in measures of volume (except grapes and blueberries). These were converted at the following rates: 1 bushel of apples = 42 pounds; 1 quart of strawberries, raspberries = 1.25 pounds; 1 bushel of all other tree fruits = 50 pounds (net weight). In the case of British Columbia, 1 quart of berries = 1.5 pounds.

Confidentiality

In cases of confidentiality of Provincial data, these data are included in regional and Canada totals.

Metric Conversion

The following conversion factors were used in this publication:

(1) Area 1 acre = 0.404 685 hectare

(2) Production (a) 1 ton (short 2,000 lb.) = 0.907 185 metric tonne, (b) 1 lb. = 0.453 592 kg

Further supplemental information will be presented in the publication as follows:

June: Mushroom Growers Survey

July: Niagara Sour Cherry Objective Yield Survey Results

August: Niagara Grape and Peach Objective Yield Survey Results

November: Estimated Sales of Fruit to Processors

Les estimations de la valeur agricole représentent une estimation des profits réalisés par les producteurs après la vente des fruits de conserve et de fruits frais. La valeur de la ferme comprend les subventions fédérales. Le supplément publié en novembre intitulé "Estimations des ventes aux conditionneurs de Fruit" présente la quantité et la valeur des fruits mis en conserve.

Les données de 1976 sur la valeur et toutes les estimations de 1977 sur les cultures de fruits doivent être considérées comme préliminaires et sujettes à révision. Les données sont préparées en consultation avec les ministères fédéral et provinciaux de l'Agriculture dans diverses régions productrices de fruits.

De brefs rapports sur l'état des cultures au Canada paraîtront tous les mois pendant l'été. La publication de janvier 1978 renfermera un résumé de ces rapports et de la production enregistrée pour toute la saison 1977.

Note: Dans les Provinces Maritimes et au Québec, les estimations initiales effectuées par Statistique Canada ont été exprimées en mesures de volume (sauf pour les raisins et les bleuets). Les chiffres obtenus ont été convertis aux taux suivants: 1 boisseau de pommes = 42 livres; 1 pinte de fraises, de framboises = 1.25 livres; 1 boisseau de tous autres fruits de verger = 50 livres (poids net). Dans le cas de la Colombie-Britannique, 1 pinte de baies = 1.5 livres.

Confidentialité

Si les données d'une province sont confidentielles, elles seront comprises dans les totaux des régions et du Canada.

Conversion métrique

Dans cette publication les facteurs de conversion suivants ont été utilisés:

(1) Superficie 1 acre = 0.404 685 hectare

(2) Production (a) 1 tonne (courte 2,000 liv.) = 0.907 185 tonne métrique, (b) 1 liv. = 0.453 592 kg

De plus amples renseignements complémentaires seront présentés dans la publication au cours des mois suivants:

Juin: Enquête sur les producteurs de champignons

Juillet: Résultats de l'enquête sur les rendements prévus de cerises aigres du Niagara

Août: Résultats de l'enquête sur les rendements prévus de raisins et de pêches du Niagara

Novembre: Ventes estimatives de fruits aux conditionneurs

TABLE OF CONTENTS

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- p nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

Comme l'enquête a été effectuée presque au même moment que les semences, le chiffre de la superficie cultivée sera susceptible d'être rectifié. En outre, même si la plus grande partie des terres font l'objet d'un contrat, les légumes non cultivés sous contrat qu'achètent les conditionneurs entraîneront peut-être une hausse du niveau de production.
