Chief, General Manufactures Branch: A. Cohen, B.Com

THE STOCK AND POULTRY FOODS INDUSTRY, 1939.

The stock and poultry foods industry is an important factor in the agricultural development of the Dominion, in so far as it relates to animal husbandry and poultry raising. In addition to the feed grown by farmers themselves, when crop conditions are favourable, large quantities of scientifically blended feeds are produced annually by manufacturers of stock and poultry foods. For the year 1939 the output of this industry was valued at \$12,665,243 requiring the labour of 1,311 persons whose remuneration amounted to \$1,572,483. The value of the grain and other materials used totalled \$9,102,342 while the capital invested in fixed and current assets was \$8,282,383. In 1939 there were 121 establishments reporting in this industry, distributed by provinces as follows: Prince Edward Island 3, Nova Scotia 1, New Brunswick 5, Quebec 23, Ontario 41, Manitoba 5, Saskatchewan 2, Alberta 12, and British Columbia 29.

In addition to the stock and poultry foods produced in this industry, large quantities are also produced in other industries, notably, "flour and feed mills", "slaughtering and meat packing" and "breakfast foods" establishments. The production of stock and poultry foods by all industries in 1939 totalled 375,900 tons. Of this amount 229,974 tons were reported by the stock and poultry foods industry and 145,926 tons by other manufacturing industries and retail stores mixing feeds. Compared with the previous year there was an increase of 62,450 tons in the total production of stock and poultry foods by all industries. For details of production see Tables 2 and 3. Part of this increase is due to the greater coverage in 1939 as compared with the previous year.

In order to obtain comprehensive statistics on the production of stock and poultry foods, a special survey was made in 1939 of producers of mixed feeds, etc. whose main operations do not consist of the production of these commodities.

The feeds and other products shown in table 2 were reported by firms whose main business consists of the manufacture of stock and poultry foods and by firms who are primarily dealers in grains and feeds but who produce considerable quantities of mixed feeds. In addition to the stock and poultry foods produced by these firms, large quantities of mixed feeds, etc. are also produced by firms who are reporting under other industrial classifications, such as "slaughtering and meat packing", "flour and feed mills", "chemicals", "breakfast foods", etc. In this second group are also included a large number of retail flour and feed stores who produce feeds on a small scale.

All firms manufacturing mixed feeds must register their formulae with the Plant Products Division of the Department of Agriculture. In the present survey the Bureau endeavoured to obtain statistics from all firms licensed to produce mixed feeds. Firms producing mixed feeds who are not reporting under the stock and poultry foods industry were required in 1939 to give details of their production only. The quantities of mixed feeds reported by the 217 firms reporting under this category are given in table 3.

Detailed statistics relating to materials used, capital invested, employment, etc. published in this report refer only to firms listed in the stock and poultry foods industry.

THE STOCK AND POULTRY FOODS INDUSTRY, 1939.
