ANNUAL

THE FISH PROCESSING INDUSTRY

(Including Packing and Handling)

1958

Published by Authority of
The Honourable Gordon Churchill, Minister of Trade and Commerce

DOMINION BUREAU OF STATISTICS

Industry and Merchandising Division

August, 1960
6522-523

Price: 50 cents

PUBLICATIONS

The results of the annual Census of Industry are published by the Dominion Bureau of Statistics in a series of industry reports which are released each year as the compilations are completed. Reports for industries in the **Foods, Beverages and Tobacco Major Group** are listed below, along with current and annual publications of related interest. Similar reports are issued for other industries. A complete catalogue of publications of the Bureau is available on request from the Information Services Division, Dominion Bureau of Statistics, Ottawa, or from the Queen's Printer, Ottawa.

Note: In addition, several special statements are available. These include Monthly Meat Products, Monthly Stocks of Canned Foods, Monthly Production of Alfalfa Meal, Quarterly Bread and Bakery Products, 20 Seasonal Commodity Reports of Canned Fruits and Vegetables including Irish Potatoes.

Remittances should be in the form of cheque or money order, made payable to the Receiver General of Canada and forwarded to the Information Services Division, Dominion Bureau of Statistics, or to the Queen's Printer, Ottawa, Canada.

EXPLANATORY NOTES

This report is one in a series of about 130 publications which present the results of the 1958 Census of Manufactures. Most reports in this series refer to specific industries, but there are summary reports for Canada and the provinces and for major industry groups. An annual Census of Manufactures has been carried out by the Dominion Bureau of Statistics since 1916.

Industry statistics given in these reports refer to number of establishments, employees, salaries and wages, cost of materials, supplies, fuel and electricity, gross value of shipments, inventories and value added by manufacturing. Details of materials used and products shipped are also given. Descriptions of the principal industry statistics, with special reference to 1958, are as follows:

Period Covered

Firms are asked to submit figures for the calendar year, if at all possible, and most reports are on this basis. Financial year reports for periods differing from the calendar year are accepted in instances where the firms find it impossible to supply calendar year data from accounting records. However the data on employees, salaries and wages are requested on a calendar year basis in all cases.

Establishment

Data for the annual census is collected on an establishment basis. A firm with more than one plant is required to file a report for each plant. In most cases an establishment is a complete factory. Sometimes, however, a plant is divided into two or more establishments when it carries out operations classifiable to different industries and when separate accounting records are available. Usually the statistics for an establishment relate only to the manufacturing activities. Other activities such as construction at the plant by its own employees, wholesale or retail activities carried on at the plant location, etc., are not included. Plants engaged solely in repair work (except in the case of furniture, shipbuilding, boat building, aircraft and railway rolling stock industries) are not included but plants occupied in assembling parts into complete units are included.

Employees

Administrative and office employees include all executives and supervisory officials such as presidents, vice-presidents, secretaries, treasurers, etc., together with managers, professional and technical employees, superintendents and factory supervisors above the working foremen level and clerical employees. Working owners and partners are also included in this category.

Production and related workers include all other factory workmen whether paid on a monthly, weekly, hourly or piece-work basis. Working foremen doing work similar to that of the employees they supervise are included, as are maintenance, warehousing and delivery staffs. Employees on new construction work, in retail or wholesale operations, on outside piece work etc., are not included.

Production workers are reported by months, an average for the year being obtained by summing the monthly figures and dividing by twelve. This procedure is followed even though the plant did not operate in all months. Figures on employment refer to calendar years whether or not some establishments reported other data on a financial year basis.

Salaries and Wages

Salaries and wages refer to gross earnings of the employees described above, including salaries, wages, commissions, bonuses, the value of room and board where provided, deductions for income tax and social services such as sickness and unemployment insurance, pensions, etc., as well as any other allowances forming part of the employees' wages. Payments for overtime are included.

Salaries refer to amounts paid to administrative and office employees. Withdrawals by working owners or partners for normal living expenses for self and family are included but not their withdrawals for income tax. Wages refer to the amounts paid to production and related workers as defined above. Data on earnings refer to the calendar year whether or not some establishments reported other data on a financial year basis.

Cost of Fuel and Electricity

Figures for fuel refer to amounts actually used, (including fuel used in cars and trucks), not to purchases unless the quantities are the same. Values refer to the laid-down cost at the works, including freight, duty, etc.

Materials and Supplies Used

Figures represent quantities and laid-down cost values, at the works, of materials and supplies actually used during the year whether purchased from others or received as transfers from other plants of the reporting company. Amounts paid to other manufacturers for work done on materials owned by the reporting company are included. Returnable containers or any other items charged to capital account are not included. Fuels are not included. Goods bought from others or received as transfers from other plants of reporting companies

for resale without further processing are not included. Maintenance and repair supplies not chargeable to capital account are included.

Factory Shipments

Factory shipments refer to shipments of goods made from own materials either in the reporting plant or by other manufacturers on the basis of a charge to the reporting plant for work done. All products and by-products shipped from the establishment are included whether for domestic use, export, or for government departments. Transfer shipments to sales outlets, distributing warehouses or to other manufacturing units of the reporting firm are included. Goods bought or received as transfers and resold without further processing are not included. Values are computed on f.o.b. plant or plant warehouse basis, and do not include sales tax or excise duties. Values of containers not returnable are included. Amounts received in payment for work done on materials owned by others are included.

In a few industries such as shipbuilding, aircraft, etc., where work on principal products extend over a relatively long period, the value of production is recorded rather than the value of shipments. For those industries production is computed from the value of deliveries of complete units during the year plus the value of work done during the year on unfinished units less the value of work done in previous years on finished units delivered in the year under review.

Inventories

Values represent the book values of manufacturing inventories owned and held at the reporting plant. Figures include inventories held in warehouses or selling outlets which have been included with plant operations for purposes of reporting shipments.

Value Added by Manufacturing

Figures are computed from value of shipments plus or minus changes in inventories of finished

goods and goods in process less cost of materials, fuel and electricity. This figure is sometimes referred to as net production.¹

Standard Industrial Classification

The Standard Industrial Classification Manual, prepared by the Dominion Bureau of Statistics, provides for 135 three-digit industries in the manufacturing sector, arranged in 17 major groups. Reporting establishments are classified or allotted to specific industries on the basis of the value of principal products made or shipped.

Short Forms

Prior to 1949 all manufacturing firms, regardless of size, were required to complete a standard form annually covering all census details, but for later years an effort was made to ease the reporting burden for smaller firms which usually do not maintain regular records in the required detail. A modified or short form was introduced in 1949 asking for the total value of shipments only, or in industries with a large number of small firms, for total value of shipments and quantities and values of a few principal products. Using the ratio of value of shipments in the current year to value of shipments in the base year, 1948, estimates of other census data were made for each plant for inclusion in the regular compilations. In general, the cut-off point for short forms was set at \$50,000 gross value of shipments annually, but there were lower cut-offs for a number of industries in which the small firms accounted for a larger share of total shipments. About 40 per cent of the total number of establishments reported on the modified or short form. They accounted for less than 3 per cent of the total value. In 1958, to establish a new base year, the small firms were again asked to report data on employees, salaries and wages, and other principal statistics together with some detail on material and products.

¹ To arrive at the National Accounts concept of "gross domestic product at factor cost", it would be necessary to subtract also the cost of office supplies used, advertising, insurance and other goods and services obtained from other businesses. Data on these inputs are not collected on the annual Census of Manufactures. Value added figures for "The primary industries and construction" are published in D.B.S. publication 61-202, *Survey of Production*.

SYMBOLS

The interpretation of the symbols used in the tables throughout this publication is as follows:

- .. figure.
- ... figures not appropriate or not applicable.
- nil or zero.
- † revised figures.

FOREWORD

The tables that follow present statistics for establishments engaged in processing, packing and handling fish at the secondary industrial level. These establishments constitute an integral part of the Bureau's industrial statistics of the Foods and Beverages Group. Some fishermen also process the fish they land to a certain degree, but their operations are not included here. Furthermore the inland areas (Ontario, Prairie Provinces and Northwest Territories) are not at present included in the Census of Industry Survey although some fish processing is done there.

Prior to 1956, the fish processing establishments were not clearly defined and included not only establishments engaged in the actual processing of fish i.e. cutting, drying, freezing, etc., but also those whose function was to assemble fish or fishery products, i.e. lobsters, salt fish etc. In order to put this industry on a comparable basis with other industries in the Census of Industry, it was decided to distinguish between these two types of establishments.

For the purpose of this Census of Industry report the following definitions have been made:—

Fish Processor — a company whose main business is the processing of fish, i.e. cutting, freezing, drying, salting, smoking, pickling, canning, etc.

Fish Packer or Handler — a company whose main business is buying, wholesaling, packing or handling; who buys and sells fresh fish only; or who buys processed fish or fish products and sells without further processing.

Increases in the number of establishments in 1956 over those reported in 1955 are largely due to the better coverage of "Handlers", chiefly in Newfoundland, made possible by the better definition of the industry. It should be emphasized that segregation of firms into (a) Processors and (b) Packers and Handlers for 1955 was made on the basis of the 1956 returns.

Beginning in 1956, establishments were asked to report actual sales or shipments rather than production as in the past. As a consequence, the principal statistics for 1956 are not fully comparable with those of previous years. Details of production will be found in another D.B.S. annual "Fisheries Statistics of Canada, 1956."

TABLE 1. Principal Statistics of the Fish Processing and Packing Industry, Canada, 1948 - 55
Processors, packers and handlers

Year	Establishments	Average employment	Salaries and wages	Fuel and electricity	Cost of materials used	Selling value of products	Value of shipments (sales)

November	6,903	2,273					
December	5,294	1,486					
Monthly average ²					8,021	3,588	11,609

¹ The number of production workers by months was generally collected only for establishments reporting value of shipments of \$50,000 and over. For smaller establishments, only the numbers employed during the last pay period of May, 1958 was collected.

² The average for establishments generally reporting shipments of less than \$50,000 was estimated by using average annual earnings data from the large establishments in conjunction with reported payrolls for the small establishments.

TABLE 17. Consumption of Fuel and Electricity by the Fish Processing Industry, Canada, 1958

	Quantity	Cost value at factory
		\$
1. Establishments reporting commodity detail: ¹		
Bituminous coal (a) From Canadian mines	ton 13,893	206,017
(b) Imported	" 8	278
Sub-bituminous coal (from Alberta mines only)	" 40	845
Anthracite coal	" 60	1,843
Lignite coal	" 10	250
Coke	" 328	6,770
Gasoline	Imp. gal. 648,649	266,244
Fuel oil	" 11,079,873	1,342,625
Wood	cord 2,917	40,360
Gas (a) Liquefied petroleum gases (propane, etc.)	Imp. gal. 8,601	2,714
(b) Other manufactured gas	M cu. ft. 8,260	6,195
(c) Natural gas	" 57,750	5,393
Other fuel	—	13,769
Electricity purchased	kwh. 46,552,909	923,111
2. Establishment not reporting commodity detail: ¹		
Total cost of fuel	21,670
Electricity purchased	14,120
3. All establishments:		
Total cost of fuel	1,914,973
Total cost of electricity	937,231
Total cost of fuel and electricity	2,852,204

¹ Data on the quantity and value of the different kinds of fuel and on quantity of electricity purchased were generally not collected for establishments reporting value of shipments of less than \$50,000. Only the total cost of fuel and the total cost of electricity were collected for these establishments.

TABLE 18. Consumption of Fuel and Electricity by Establishments Engaged in Packing and Handling Fish, Canada, 1958

	Quantity	Cost value at factory
		\$
Bituminous coal (a) From Canadian mines	ton 241	4,152
(b) Imported	" 39	747
Anthracite	" 9	343
Gasoline	Imp. gal. 227,755	94,217
