INTRODUCTION

This report is a summary of revised monthly data for 1954 on the stocks of food commodities held in dairy factories, public cold storage warehouses and other storage and wholesale establishments, such as meat packing plants and the central warehouses of chain and department stores. The continued co-operation of the many individuals responsible for submitting monthly schedules and assistance given by the officials of the Federal and Provincial Governments in collecting and processing data is gratefully acknowledged.

Stocks of creamery butter during 1954 ranged from 15 to 20 million pounds above stocks held at corresponding dates in 1953. Stocks at April 1, the lowest recorded during 1954, were 42 million as compared with 27 million pounds in 1953, and a 5-year average of 19 million pounds. At the season's peak in October, 1954, there were 115 million pounds in storage, 21 million more than at the same time in 1953 and 38 million pounds above the 5-year (1949-1953) average.

Stocks of cheddar cheese were lower in 1954 than in 1953 until October and were below the 5-year average during the first six months of the year. Quantity in storage at December 1, was 46 million pounds as compared with 36 million in 1953, 44 million in 1952 and a 5-year average December 1 stock of 38 million pounds. Stocks of other factory cheese, excluding process, ranged from 982,000 pounds at January 1 to 1,458,000 pounds at December 1 and process cheese stocks ranged from a low of 2,636,000 at July 1, to a high of 3,619,000 at May 1.

Manufacturers' stocks of evaporated whole milk were consistently lower than in 1953. At January 1, these stocks were 14.5 million pounds below the 55.5 million pounds at the beginning of 1953. This difference gradually became smaller and narrowed to 1.5 million pounds by December 1, when stocks in 1954 were 49.1 million as compared with 50.6, a year earlier.

Stocks of shell eggs during 1954 were maintained at about the same levels as in 1953, from January to July, but exceeded 1953 stocks by an increasing margin at subsequent inventory dates. Stocks at December 1, in 1954, amounted to 154 thousand cases as compared with 38 thousand cases in the previous year. At the season's peak at June 1, there were 317 thousand cases as compared with 323 thousand in 1953, and a 5-year average of 454 thousand cases.

Holdings of dressed poultry were appreciably higher than in 1953 throughout the first ten months of the year. During the first six months average stocks were about 1/3 greater than in the previous year. This difference progressively narrowed and stocks at both November 1 and December 1 were very slightly below 1953 stocks at these dates.

For the first 7 months of 1954 stocks of pork products were generally very much lower than they had been in 1953. Stocks at March 1 amounted to 38.7 million pounds as compared with 73.5 million pounds in 1953 and a 5-year average of 49.1 million pounds. During the last five months of the year the trend and level of holdings coincided closely with both the 1953 and 5-year average patterns.

Stocks of beef and veal, on the other hand, were slightly above 1953 levels in January but throughout the balance of the year were appreciably below 1953 levels although the pattern coincided very closely with the more normal or 5-year average. From April to November combined stocks of beef and veal held fairly steadily between 25 and 30 million pounds. The season's low was reached at July 1, with 25.3 million pounds and built up to 33 million pounds at December 1.

Total meat stocks were lower than in 1953 for each inventory date in 1954, the differences being extremely wide during the first half of the year. In 1953 the peak meat stock was recorded at May 1 with 125 million pounds as compared with the 1954 peak of 82.8 million pounds at June 1. At the low point, October 1 in both years, 1954 stocks were 54.4 million pounds as compared with 62.2 in 1953.

Stocks of fruit—frozen and in preservatives—averaged moderately higher than in 1953 falling below the previous year's stocks only by a small margin at July 1. Except for the fact that the low point in 1954 was reached at July 1 rather than at June 1, the seasonal pattern of holdings followed the normal trends. Stocks of apples at November 1 were approximately 1 million bushels greater in 1954 than in 1953.

The data on food stocks in this report do not include stocks held in Newfoundland.

TABLE 1. Dairy and Poultry Products in Cold Storage and Wholesale Warehouses, in Dairy Factories and in Transit
in Canada as at the First Business Day of Each Month during 1954
