Seasonal Variation.....	31

## INTRODUCTION

Stocks of creamery butter at the beginning of 1955 were about 20 million pounds above stocks a year earlier. This difference narrowed up to August 1, when the 1955 holdings exceeded those of 1954 by approximately 13 million pounds. At the end of the year the difference was 9.6 million pounds.

Stocks of cheddar cheese were higher than in 1954 throughout the first seven months of 1955 but the difference narrowed from 9 million pounds at the beginning of the year until at August 1 they were about the same at 40 million pounds for both years. At the end of 1955, holdings amounted to about 38 million pounds, approximately 5 million lower than a year earlier and 3 million pounds above the 5 year (1950-1954) average. Stocks of other factory cheese, excluding process cheese, ranged between one and two million pounds with the season's peak holdings at September 1. Process cheese in storage varied from almost 5 million pounds at April 1 to 2.6 million at November 1.

Manufacturers' stocks of evaporated whole milk were consistently lower than in 1954 till November and were below the 5 year average through the summer months. Peak holdings of 62.5 million pounds were reached at October 1. Skim milk powder holdings were considerably lower in 1955 than in 1954 at most reporting dates with the season's high of 13.4 million pounds at November 1 as compared with a 19 million pound peak at October 1 in 1954.

Stocks of shell eggs, cold storage and fresh, amounted to 230,000 cases at the beginning of 1955 and reached the season's peak with 363,000 cases at June 1. This compared with the 1954 change from 70,000 to 317,600 cases from January 1 to June 1. During the last half of 1955, stocks were well below 1954 and the 5 year average at each reporting date and at year-end, holdings were only 49,000 cases. Stocks of frozen eggs, on the other hand, were consistently higher throughout the year than in 1954 and moderately above the five year average at each reporting date.

Holdings of poultry meat were considerably below 1954 and 5 year average levels till October but the year-end carryover was approximately 26 million pounds in both years. Eviscerated birds accounted for about one fifth to one third of reported stocks.

Stocks of pork in storage were well below the 5 year average for each month up to November 1 when they were slightly above but at December 1 they were again slightly below the 5 year average. Stocks were also appreciably below corresponding 1954 levels from April to October. At their peak at May 1, 1955, holdings amounted to 47.5 million pounds as compared with a 5 year average of 58.5 million pounds at that date. Year-end stocks, however, at 36.5 million pounds were 2 million higher than last year.

Beef and veal stocks followed the 5 year average levels closely till August, but were well below 1954 levels in the early part of the year. They moved sharply above 1954 and the five year average from September to year-end, when they amounted to about 37 million pounds compared to 30 in 1954.

Inventories of all meats together were again, as in 1954, appreciably below 5 year average levels during the first half of the year but rose above the average holdings from September onward and at year-end, exceeded 1954 total stocks by about 10 million pounds.

Stocks of fruit—frozen and in preservatives were well above 1950-1954 average levels throughout 1955 and were appreciably higher than in 1954 for each reporting date till November. Stocks of apples in cold and common storage at November 1 amounted to approximately 8.5 million bushels as compared with 7.6 million bushels in 1954 and 6.5 million bushels at their peak storage in 1953. Potato stocks, also at their peak in November, amounted to 29.6 million bushels in 1955 as compared with 23.4 million bushels in 1954.

TABLE 1. Dairy Products in Cold Storage and Wholesale Warehouses, in Dairy Factories and in Transit in Canada
