SUMMARY

This report is a summary of revised monthly data for 1957 on the stocks of food commodities held in dairy factories, public cold storage warehouses and other storage and wholesale establishments, such as meat packing plants and the central warehouses of chain and department stores. The continued cooperation of the many individuals responsible for submitting monthly schedules and assistance given by the officials of Federal and Provincial Governments in collecting and processing data is gratefully acknowledged.

There was a net reduction of about 18 million pounds in creamery butter stocks during 1957. At May 1, the low point for butter stocks, holdings at 37 million pounds were about 27 million pounds lower than at the corresponding date in 1956. Production of butter during the fall was considerably higher in 1957 than in 1956 and stocks reached their seasonal peak at November rather than at October 1, as is more usual.

Stocks of cheddar cheese were consistently about 2 million pounds above the average holdings during the last 5 years till May 1. Build-up of stocks during the production season was rapid. They rose from the season's low of 28 million pounds at May 1 to peak holdings of almost 58 million pounds at October 1. The year-end carry-over at 51.9 million pounds was almost 13 million pounds above the last 5 year average carry-over.

Stocks of evaporated whole milk held by or for manufacturers averaged about 5 million pounds below the 1952-56 seasonal trend line till June 1. Build up continued sharply through August and part of September to make peak holdings 81.4 million pounds as compared with the five year average of 70.4 and 1956 holdings of 62 million pounds at October 1. Stocks of skim milk powder, about 8 million pounds at January 1, 1957, amounted to almost 48 million pounds at January 1, 1958. From below average holdings during the early months of the year accumulation after June 1 was at a rate of about 6 million pounds per month.

Stocks of shell eggs were well above recent years' averages throughout 1957. From 119 thousand cases at January 1, holdings increased steadily to reach the season's peak of 479 thousand cases at July 1. A fairly steady out-of-storage movement after July 1 resulted in reducing stocks to about 90 thousand cases by December 1. Holdings of frozen eggs greatly exceeded the 1956 level and the five year average with the difference widening steadily at each succeeding reporting date. Thus, while at April 1 stocks amounted to 7 million pounds in 1957 as compared with 5 in 1956, they had in-

creased to almost 15 million pounds at November 1, in contrast to 6 million pounds at November 1, 1956.

Poultry meat in cold storage at the beginning of the year amounted to about 42 million pounds as compared with 26 million pounds a year earlier. While the difference in level gradually narrowed to only 2 million pounds at the peak (December 1) when 1957 stocks were 47 as compared with 45 million pounds in 1956, the larger than usual holdings throughout spring, summer and early fall months reflected heavy production and, to some extent, storage for government account of stocks acquired in price support operations.

Stocks of pork were at exceptionally low levels relative to average holdings over the last 5 years. Stocks at January 1, 1957 were almost 22 million pounds as compared with the 5 year average (1952-1956) of 42 million pounds. The season's peak was less than 37 million pounds and occurred at April 1 rather than at May 1, the more usual seasonal peak date. The average (1952-1956) seasonal high at May 1 was 59.5 million pounds. A further exception to the usual storage pattern was that a moderate in-to-storage movement started in September whereas the usual low point for stocks of pork is October 1.

Quantities of beef and veal in storage were moderately above average holdings during the early months of the year but conformed to the usual seasonal pattern with the seasons low point of 30 million pounds at July 1 and high points of 42.6 and 42.2 million pounds at January 1 and December 1 respectively.

Total stocks of meat were appreciably below year earlier and average levels from January to September in 1957. This was due, almost entirely, to low inventories of pork products. However, beginning and ending inventories of total meats were practically equal, at about 69 million pounds.

Stocks of fruit, frozen and in preservatives, were lower than in 1956 till June 1 but a much more pronounced into-storage movement during June and July of 1957 brought holdings to be carried through the fall to about 40 million pounds in total as compared with 1956 and 5 year average fall holdings of approximately 35 million pounds.

Apples in storage at November 1 amounted to 8.6 million bushels as compared with 6.5 and 8.5 million bushels at the corresponding time in 1956 and 1955 respectively. Stocks of potatoes at November 1, the peak of the storage season, amounted to almost 19 million hundredweight, an increase of 1 million hundredweight over the corresponding 1956 stocks.
