SUMMARY

This report is a summary of revised monthly data for 1958 on the stocks of food commodities held in dairy factories, public cold storage warehouses and other storage and wholesale establishments, such as meat packing plants and the central warehouses of chain and department stores. The continued cooperation of the many individuals responsible for submitting monthly schedules and assistance given by the officials of Federal and Provincial Governments in collecting and processing data is gratefully acknowledged.

As a result of increased production coupled with slightly lower per capita consumption the net increase in stocks, or into-storage movement, of creamery butter amounted to 23.8 million pounds in 1958. Stocks built up rapidly from the low point (35.3 million pounds) at May 1 to the seasons' peak of 113.9 million pounds at November 1. Five-year average peak stocks (1953-57) were 109.6 and 108.2 million pounds at October 1 and November 1 respectively. In three of these years the season's peak was reached with October 1 holdings. The record high for creamery butter stocks in Canada was 127.9 million pounds at November 1, 1955. Thus the peak holdings in 1958 were 14 million pounds below the record high.

Stocks of cheddar cheese were consistently 13 to 14 million pounds greater than average holdings during the last five years until November 1 after which they were sharply reduced by exports and at January 1, 1959 amounted to 46.6 million pounds, still about 5.5 million pounds above the 5 year average but 5.4 million pounds lower than at January 1, 1958. The season's low and high holdings were 41.3 and 61.4 million pounds at April 1 and October 1, respectively.

Stocks of evaporated whole milk were approximately 48 million pounds at both the beginning and the end of 1958. Seasonal fluctuation was somewhat less pronounced than in 1957 with a low of 22.1 million pounds at April 1 as compared with 12.3 in 1957 and the high point at September 1 with 80.6 million pounds in storage being almost identical both years.

Skim milk powder stocks were quadruple the five year average at the beginning of the year with about 48 million pounds in storage. They declined only about 9 million pounds by April 1 and from May to October built up rapidly to a peak of 98.3 million pounds at November 1 and then declined to 77.3 million pounds by year-end.

In contrast to the situation in 1957, stocks of shell eggs were generally below 5 year average holdings during 1958. Peak stocks at June 1 amounted to 259,000 cases as compared with the 1957 peak of 479,000 cases at July 1. Stocks amounted to a very moderate 56,000 cases at November 1, the low point in the 1958 season, and rose to 102,000 cases at year-end.

With a sizeable carryover from 1957, frozen egg stocks at the beginning of 1958 amounted to 13.3 million pounds. A sharp reduction from approximately this level occurred during April, May and June holdings were just below 8 million pounds from which they increased moderately to average about 10 million pounds through late summer and the fall but declined during November and December to 6.2 million pounds at year-end to show a net out-of-storage movement of 7.1 million pounds in 1958.

Total poultry meat in storage at the beginning of 1958 amounted to 35.5 million pounds as compared with 42.4 million pounds a year earlier. A similar relationship, with 1958 stocks well below 1957 holdings, prevailed until August. Stocks at August 1 were 11.7 million pounds but rose rapidly from this low point to reach 62.7 million pounds, a record, at December 1. This was 15.6 million pounds higher than the December 1 peak in 1957 and 26.7 million pounds above the 5 year average. Over half of the poultry meat in storage at December 1 was turkey meat, at 33.4 million pounds. Heavy out-of-storage movement occurred during December but 46.4 million pounds, a record carry-over, including 18.7 million pounds of turkey meat, was left in storage at the end of the year.

Stocks of pork were appreciably below average holdings during the first eight months of 1958. The spring peak of total pork stocks, at May 1, amounted to 40.7 million pounds as compared with a five-year average of 52 million pounds. The low point at October 1, with stocks at almost 24 million pounds, was normal. With a heavy fall run of hogs, storage stocks increased to reach 46.9 million pounds by the year-end, an increase of about 17 million pounds from the 5 year average.

Quantity of beef and veal in storage followed the usual pattern with stocks in winter months approximately 40 million pounds as compared with fairly uniform averages of about 30 million pounds during late spring, summer and early fall months. Holdings at most reporting dates were moderately lower in 1958 than in 1957 and the average for the last 5 years.

The seasonal pattern of total meat stocks closely followed that of pork holdings, though the spring and summer months were well below the average of the previous 5 years. At their May 1 peak, total meat stocks were 76.9 million pounds as compared with an average of almost 89.6 million at that date. The increase from the seasonal low of 62.8 million pounds at October 1, 1958 to 94.3 at January 1, 1959 was largely due to accumulated pork stocks.

Storage holdings of frozen fruits, together with fruits held in preservatives were slightly higher

than in 1957 and ranged 2 to 4 million pounds above 5 year average holdings during the first half of 1958. Into-storage movement in the production season was much more pronounced than in 1957 and stocks through the fall months, fairly stable at the 50 million pound level, were about 10 million pounds in excess of holdings in the previous year. Most of this increase in holdings was quite uniformly distributed between cherries, strawberries and raspberries.

At November 1, the peak of the apple storage season, stocks of apples amounted to 9.4 million bushels as compared with 8.6 in 1957 and only 6.5 in 1956. Carry-over at the year-end was 6.4 million bushels, about 1 million bushels more than in 1957 and 1.7 million bushels above the 5 year average carry-over. Potato stocks, approximately 19 million hundredweight at November 1, the beginning of the storage season, were almost identical with 1957 stocks at the same date.
