Price 25 cents

SYMBOLS

The interpretation of the symbols used in the tables throughout this publication is as follows:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- P preliminary figures.

EXPLANATORY NOTES

This report is one in a series of about 140 publications which present the results of the 1960 Census of Manufactures. Most reports in this series refer to specific industries, but there are summary reports for Canada and the provinces and for major industry groups. Adoption of the revised Standard Industrial Classification for 1960 compilations has necessitated changes in titles of many reports in this annual series. The content of many industries has also been affected (see following note on Industrial Classification).

Industry statistics given in these reports refer to number of establishments, employees, salaries and wages, cost of materials, supplies, fuel and electricity, gross value of shipments, inventories and value added by manufacturing. Details of materials used and products shipped are also given. Descriptions of the principal industry statistics, with special reference to 1960 are as follows:

Period Covered

Firms are asked to submit figures for the calendar year, if at all possible, and most reports are on this basis. Financial year reports for periods differing from the calendar year are accepted in instances where the firms find it impossible to supply calendar year data from accounting records. However the data on employees, salaries and wages are requested on a calendar year basis in all cases.

Establishment

Data for the annual census is collected on an establishment basis. A firm with more than one plant is required to file a report for each plant. In most cases an establishment is a complete factory; sometimes, however, a plant is divided into two or more establishments when it carries out operations classifiable to different industries and when separate accounting records are available. Usually the statistics for an establishment relate only to the manufacturing activities. Other activities such as construction at the plant by its own employees, wholesale or retail activities carried on at the plant location, etc., are not included. Plants engaged solely in repair work (except in the case of furniture, shipbuilding, boat building, aircraft and railway rolling stock industries) are not included but plants occupied in assembling parts into complete units are included.

Employees

Administrative and office employees include all executives and supervisory officials such as presidents, vice-presidents, secretaries, treasurers, etc., together with managers, professional and technical employees, superintendents and factory supervisors above the working foremen level, and clerical employees. Working owners and partners are also included in this category.

Production and related workers include all other factory workmen whether paid on a monthly, weekly, hourly or piece-work basis. Working foremen doing work similar to that of the employees they supervise are included, as are maintenance, ware-

housing and delivery staffs. Employees on new construction work, in retail or wholesale operations, on outside piece work etc. are not included.

Production workers are reported by months, an average for the year being obtained by summing the monthly figures and dividing by twelve. This procedure is followed even though the plant did not operate in all months. Figures on employment refer to calendar years whether or not some establishments reported other data on a financial year basis.

Salaries and Wages

Salaries and wages refer to gross earnings of the employees described above, including salaries, wages, commissions, bonuses, the value of room and board where provided, deductions for income tax and social services such as sickness and unemployment insurance, pensions, etc., as well as any other allowances forming part of the employees' wages. Payments for overtime are included.

Salaries refer to amounts paid to administrative and office employees. Withdrawals by working owners or partners for normal living expenses for self and family are included but not their withdrawals for income tax. Wages refer to the amounts paid to production and related workers as defined above. Data on earnings refer to the calendar year whether or not some establishments reported other data on a financial year basis.

Cost of Fuel and Electricity

Figures for fuel refer to amounts actually used, (including fuel used in cars and trucks), not to purchases unless the quantities are the same. Values refer to the laid-down cost at the works, including freight, duty, etc.

Materials and Supplies Used

Figures represent quantities and laid-down cost values, at the works, of materials and supplies actually used during the year whether purchased from others or received as transfers from other plants of the reporting company. Amounts paid to other manufacturers for work done on materials owned by the reporting company are included. Returnable containers or any other items charged to capital account are not included. Fuels are not included. Goods bought from others or received as transfers from other plants or reporting companies for resale without further processing are not included. Maintenance and repair supplies not chargeable to capital account are included.

Factory Shipments

Factory shipments refer to shipments of goods made from own materials either in the reporting plant or by other manufacturers on the basis of a charge to the reporting plant for work done. All products and by-products shipped from the establishment are included whether for domestic use, export, or for government departments. Transfer shipments to sales outlets, distributing warehouses or to other manufacturing units of the reporting firm are included. Goods bought or received as transfers

and resold without further processing are not included. Values are computed on f.o.b. plant or plant warehouse basis, and do not include sales tax or excise duties. Values of containers not returnable are included. Amounts received in payment for work done on materials owned by others are included.

In a few industries such as shipbuilding, aircraft, etc., where work on principal products extend over a relatively long period, the value of production is recorded rather than the value of shipments. For those industries production is computed from the value of deliveries of complete units during the year plus the value of work done during the year on unfinished units less the value of work done in previous years on finished units delivered in the year under review.

Inventories

Values represent the book values of manufacturing inventories owned and held at the reporting plant. Figures include inventories held in warehouses or selling outlets which have been included with plant operations for purposes of reporting shipments.

Value added by Manufacturing

Figures are computed from value of shipments plus or minus changes in inventories of finished goods and goods in process less cost of materials, fuel and electricity. This figure is sometimes referred to as net production.

Standard Industrial Classification

The revised Standard Industrial Classification which has been introduced with the 1960 Census of Manufactures provides for a breakdown of the universe into 140 industries arranged in 20 major groups compared with 135 industries in 17 major groups in the old classification which was used in the compilations for the years 1949 to 1959 inclusive. It incorporates changes considered desirable on the basis of experience in using the earlier classification as well as those which take account of changes in the structure of Canadian industries associated with the rapid developments of the past decade. Full details are contained in the Standard Industrial Classification Manual, Catalogue No. 12-501, which is available from either the Queen's Printer or the Dominion Bureau of Statistics. Reporting establishments are classified or allotted to specific industries on the basis of the value of principal products made or shipped.

Many industries remain unchanged in the new classification but in many instances there have been substantial changes in content because of the shifting of establishments from one industry to another or in re-grouping of establishments. Where changes have occurred the principal statistics for 1957, 1958 and 1959 have been re-compiled to provide data on a basis comparable with those for 1960.

Short Forms

Between 1949 and 1957, in an effort to ease the reporting burden for smaller firms, a short form was used asking for the total value of shipments only or, in a few cases where losses of detail were significant, for quantities and values of principal products. For purposes of publication, missing data were estimated on the basis of appropriate ratios. In general the cut-off point for these short forms was set at \$50,000 value of shipments. About 40% of the total number of establishments reported on the short form and accounted for less than 3 per cent of the total value of shipments.

In 1958, in order to establish a new base year, the small firms were asked to report all items of principal statistics together with some detail on materials and products.

For the 1959 Census, the short form was used again, but further steps were taken to ease the respondents' burden. First, the general limit for short forms was raised to \$100,000 value of shipments. In addition, a new intermediate form was developed. This form is a shortened version of the long form in that most of the general questions were pared down and the detailed lists of materials and products were limited to the more important items. The general limits for firms in this category were set at between \$100,000-\$500,000 value of shipments, but in the case of both the short and intermediate forms there were lower cut-offs for a number of industries in which the smaller firms accounted for a larger share of total shipments. On the other hand, limits were raised where this could be done without a significant loss of coverage. On most of the short forms for 1959, in addition to total value of shipments, data on principal products were requested. In a few industries, where loss of employment and earnings data were considered too large because of higher cut-offs, a question on total payroll was placed on the short form. This practice was followed again in 1960.

The intermediate and long forms provide complete data for the compilation of all elements of principal industry statistics and the details of materials and products. The one-page short form, although containing data on principal products and total value of shipments, does not request information on other elements of principal statistics such as value of inventories, materials, fuel and electricity and, in most cases, employment and salaries and wages, nor does it contain detailed data on volume and value of materials used. For purposes of compiling aggregates of principal statistics by industry and by geographic location, the missing data for each establishment were estimated for 1959 by using, in general, ratios based on the change in the value of shipments between 1958 and 1959. The proportion of the estimated data was generally less than 5 per cent of the total in each category of principal statistics.

¹ To arrive at the National Accounts concept of ''gross domestic product at factor cost'', it would be necessary to subtract also the cost of office supplies used, advertising, insurance and other goods and services obtained from other businesses. Data on these inputs are not collected on the annual Census of Manufactures. Value added figures for ''The primary industries and construction'' are published in D.B.S. publication 61-202, Survey of Production.

MACARONI MANUFACTURERS 1960

The 1960 statistics in this report (formerly the Macaroni and Kindred Products Industry) have been compiled on the basis of the Standard Industrial Classification-revised 1960. Since implementation of the New S.I.C. has resulted in changes in the content of this industry, principal statistics for 1957, 1958 and 1959 have been re-compiled on the revised basis for the purpose of comparability. It is noted however that the changes in the industry resulting from the revision in classification have not been significant.

The statistics in this report cover plants engaged in the production of dry macaroni, spaghetti, noodles, etc., for sale as such. Canned macaroni, etc., (with cheese or tomato sauce) is produced mainly in Fruit and Vegetable Canners and Preservers.

In 1954 value of factory shipments replaced value of production, and in the same year opening and closing inventory values were collected for the first time in the Census of Manufactures.

There were 17 establishments operating in the industry in 1960. These were distributed by provinces as follows: Ontario 8, Quebec 4, British Columbia 2, Manitoba 2, Alberta 1. These plants reported a total of 833 employees who received \$2,475,624 in salaries and wages. The cost of raw materials amounted to \$9,355,474 with fuel and electricity totalling \$271,991.

Total shipments of dry macaroni, spaghetti, vermicelli, noodles etc. in all industries 1960 amounted to 114,694,993 pounds with a factory selling value of \$16,414,081 while 1959 shipments totalled 111,043,134 pounds valued at \$15,247,529. These and comparable figures for nine years are given in Table 3. Other tables in this report give detailed statistics on employment, materials used, imports and exports.

¹ Profits or losses cannot be estimated from Census figures as no data are collected for expense items, such as interest, rent, depreciation, taxes, insurance, advertising, etc.

² Prior to 1952 the basis of collection was gross value of products instead of gross value of shipments.

TABLE 2. Inventory Values 1960

	Raw materials and supplies	Goods in process	Finished goods of own manufacture	Total inventory
		dol	lars	
Opening inventory:				
Ontario	609, 521	2,493	166, 767	778, 78
Quebec	242, 309	_	260, 626	502, 93
Other provinces	167, 671	4, 824	89, 221	261, 71
Canada	1,019,501	7,317	516, 614	1, 543, 43
Closing inventory:				
Ontario	603, 359	2, 665	226, 393	832, 41
Quebec	252, 943	-	367, 395	620, 33
Other provinces	119, 111	6, 673	106, 474	232, 25
Canada	975,413	9, 338	700, 262	1, 685, 01

¹ The opening inventory values for 1960 differ from the closing inventory published for 1959 because of transfers, discards, corrections, and addition of new firms. The figure for value added by manufacture for the previous years does not need to be altered because of such changes.

TABLE 6. Production Workers, by Months, 19601

Month	Male	Female	
January	435	294	
February	433	311	
March	436	301	
April	416	294	
May	422	297	
June	415	274	
July	386	291	
August	407	309	
September	431	309	
October	435	314	
November	447	318	
December	439	306	
Averages	425	301	

^{&#}x27;The number of production workers, by months, was collected only for establishments generally reporting value of shipments of \$200,000 and over. For establishments generally reporting value of shipments of less than \$200,000, no data on number of workers were collected. Average was estimated by using change in value of shipments to arrive at value of payroll which was then used in conjunction with estimated average earnings to arrive at number of workers. The estimated number of workers was then included in each month's total.

TABLE 7. Imports and Exports of Macaroni, Spaghetti and Vermicelli, 1944 - 60

TABLE 8. Fuel Consumption, 1960

Kind	Quantity	Cost at plant
		\$
Establishments reporting commodity detail:1		
Bituminous coal:		
(a) From Canadian mines ton	556	7,742
(b) Imported	_	-
Sub-bituminous coal (from Alberta mines only)	_	
Anthracite coal	-	_
Lignite coal ton	242	2,003
Coke	_	_
Gasoline (including gasoline used in cars and trucks) Imp. gal.	94,605	39, 428
Fuel oil including kerosene or coal oil	1, 350, 811	129.908
Wood	_	
Gas:		
(a) Liquefied petroleum gases	_	_
(b) Other manufactured gas	-	_
(c) Natural gas M cu. ft.	20, 690	6,702
Other fuel		
Electricity purchased kwh.	8, 287, 735	77,066
Steam purchased	_	
Estimate for establishments for which no data were collected: ²		
Cost of fuel and electricity	• • •	9,142
All establishments:		
Total cost of fuel and electricity		271,991

Establishments generally reporting value of shipments of \$200,000 and over.
 Establishments generally reporting value of shipments of less than \$200,000.

List of Macaroni Manufacturers, 1960

Name of firm	Plant address
Catelli Food Products Limited	
Mafaldo Barbieri	
Magnani Frères	9245 Blvd. Lajeunesse, Montreal, Que.
Wing Noodles Ltd.	1072 St. Urbain St., Montreal, Que.
Better Bakers	
Canada Food Products	
Catelli Food Products Ltd.	Yarmouth Rd., St. Thomas, Ont.
Naples Macaroni Co. Ltd.	
Ontario Macaroni Co. Ltd.	220 Norseman St., Toronto 18, Ont.
Primo Macaroni Mfg. Co	56 Manser Road, Weston, Ont.
Toronto Macaroni and Imported Foods Ltd.	60 Hook Ave., Rear, Toronto 9, Ont.
Wing Hing Lung Ltd.	11 Grange Ave., Toronto, Ont.
Constant Macaroni Products	254 rue Dumoulin, St. Boniface, Man.
The Creamette Co. of Canada Ltd.	283 Stanley St., Winnipeg 2, Man.
Catelli Food Products Ltd.	104-13th Ave., N., Lethbridge, Alta.
Famous Foods Ltd.	
Northwest Food Products Ltd.
