THE SUGAR REFINING INDUSTRY IN CANADA, 1930.

Ottawa, June, 1931. - Statistics of the sugar refining industry in Canada for the year 1930 are presented in this report. The refineries operating during the year were located as follows:- Ontario 2 (Chatham and Wallaceburg); Quebec 2 (both at Montreal); New Brunswick 1 (St. John); Nova Scotia 1 (Dartmouth); Alberta 1 (Raymond) and British Columbia 1 (Vancouver). In order that there may be no disclosure of statistical information regarding individual plants the statistics are shown for the Dominion only.

Principal Statistics Compared

A comparative study of the principal statistics relating to the industry is presented in the accompanying table for the past five years. Decreases from 1929 appear in the items of employees, salaries, wages, the cost of fuel, the cost of materials used and also in the value of products.

Production in Sugar Refineries, 1930.

Table 2 gives the production of sugar and its by-products by class, quantity and selling value at the refinery, for the year 1930. The quantity of refined granulated sugars, produced in Canadian refineries during 1930 was greater than that of 1929 by 5,580,003 pounds, whilst the value was less by \$3,799,543. The quantity of beet sugar increased by 25,225,488 pounds, but the quantity of cane sugar decreased by 19,645,485 pounds, making the increase as stated above. Syrups manufactured show an increase in value of \$4,585 and molasses a decrease of \$59,533. Of the 8 refineries reporting, two showed a value of production between one and two million dollars and six a production of from five to eight millions.

Comparative Production and Consumption of Sugars

A comparative study of the production and consumption of sugars in Canada for the past five years by classes, quantity and value is presented in Table 3. Consumption of any commodity is computed on the basis of production plus imports, less exports. The per capita consumption of sugar of all kinds by quantity and value based on an estimated population is shown for a five year period.

PRODUCTION OF SUGAR BEETS AND BEETROOT SUGAR, 1918-1930.

The acreage sown to sugar beets, the total yield and average yield per acre and the total value of the crop delivered at the factory are shown in Table 4 for the years 1918-1930. Acreage sown to sugar beets increased during the year by 7,976, the total yield by 162,111 tons and the total value of the crop by \$1,197,629.

Capital Invested

The capital invested in the sugar industry is presented by items in Table 5 for the year 1930. Fixed capital (including land, buildings, machinery and tools) totalled \$24,230,318, a decrease of \$2,363,647 from the preceding year, whilst working capital (including materials, fuel, stocks in process, finished products and miscellaneous supplies on hand, cash, trading and operating accounts and bills receivable) totalled \$19,624,837, an increase of \$2,684,689. The increase of all capital investment over 1929 was therefore \$321,042 or less than 1 per cent.

Employment Statistics

Employment in the sugar industry for the year 1930 is presented in the following series of tables:

- Table 6. Employment by classes, number, sex and remuneration
- Table 7. Employment by months
- Table 8. Working time of plants and employees
- Table 9. Hours worked by wage-earners in month of highest employment
- Table 10. Hours of labour per day and per week.

The total number of persons at employment during 1930 was 2,281 comprising 2,120 males and 161 females, a decrease from 1929 of 44 - representing a decrease in employment of 1.89 per cent. The total salaries and wages decreased from \$3,686,037 in 1929 to \$3,560,260 in 1930 or 3.4 per cent. The amount paid in salaries decreased by \$28,971 and wages by \$96,806. The average salary rose from \$3,054 in 1929 to \$3,091 in 1930, whilst the average wage fell from \$1,362 in 1929 to \$1,334 in 1930. The average employment per factory was 291 in 1929 as compared with 285 in 1930. Classified according to average number of persons employed, two of the eight factories employed from 100 to 200 persons (average 157), two employed from 200 to 300 persons (average 266) and four employed over 300 persons (average 359).

Employment Statistics - Cont'd.

The number of persons employed on wages is shown by months and sex in Table 7. The maximum of employment was reached in November with a total of 2,690 and the minimum in February with a total of 1,400. The average monthly employment during the year was 1,987 of whom 1,889 were males and 98 females.

Working time of plants and employees is presented in Table 8. Operating time in plants is shown under three heads, (a) full time, (b) part time and (c) idle, while the working time of employees is shown under two heads - (a) hours worked per day or shift and (b) hours worked per week. The average operating time of plants whether on whole or part time increased from 262.37 days in 1929 to 269.50 days in 1930. Time lost through plants being idle shows an average decrease of 7.13 days per plant as compared with the preceding year.

The number and the percentage of wage-earners in month of highest employment working specified hours per day is shown in Table 9, for Canada and the provinces. From a study of the table it will be seen that in the sugar industry the majority of the wage-earners in New Brunswick, Quebec and Ontario worked 10 hours or over per day, in Nova Scotia 9 hours and in Alberta and British Columbia 8 hours. The percentage of wage-earners in the Dominion working 8 hours per day or less was 21.77, for those working 9 hours 12.71 and for those working 10 hours and over per day it was 65.52.

Employment Statistics - Cont'd.

The number of hours worked per day in the month of highest employment and the standard working hours per week are shown by provinces in Table 10. It should be noted that whilst the statistics relating to hours of labour in columns 1, 2 and 3 are based on figures compiled for the month of highest employment, those in columns 4 and 5 represent the total and average of standard weekly hours of labour for the number of establishments reporting to the Bureau. For this reason, the relation between daily and weekly hours of labour is to some extent impaired. The average daily hours of labour per wage-earner on the above basis was for the Dominion 9.62, and the average standard weekly hours worked out at 62 per plant.

Table 10. - Hours of Labour per day and per week, 1930.

	Total daily hours and number of wage-earners in month of highest employment			Standard working hours per week

Alberta	3,244	372	8.72	56	56
British Columbia	2,660	330	8.06	48	48

In calculating the average hours worked per day, wage-earners working over 10 hours are taken as working  $10\frac{1}{2}$  hours.

Fuel Consumption

The quantity of the classes of fuel used and the value laid down at the works is shown in Table 11 for the year 1930. The principal fuels used were bituminous coal and fuel oils. The total cost of all fuel for the year amounted to \$1,029,175, a decrease from the preceding year of \$3,734.

Power Installation

Power employed by the sugar industry is presented in Table 12 by classes, the number of units and the horsepower capacity according to manufacturers' rating. Primary power comprises 89 steam engines and turbines with a total of 13,474 horsepower. Electric motors operated by purchased power were 294 in number aggregating 4,604 horsepower, while of those operated by power generated by the establishment the number was 885 with a rated h.p. of 12,609 making a total developed electrical horsepower of 17,213. The number of boilers installed for all purposes was 69 with a rated boiler horsepower capacity of 40,710. The cost of electricity purchased was \$63,298.

Table 12. - Power installed by classes, 1930.

Electric motors operated by power generated by the establishments	885	12,609
Total electric motor installation	1,179	17,213
Boiler installation for any purpose	69	40,710

Materials Used

The cost of materials used in the industry during 1930 is shown in Table 13, the total amounting to \$30,610,701. This is a decrease from the previous year of \$5,029,423 and is accounted for by a decrease in the average cost price of raw cane sugar, which fell from \$3.35 per cwt. in 1929 to \$2.78 per cwt. in 1930. Home grown sugar beets also show a decrease in cost laid down at the factory from \$8.84 per ton in 1929 to \$8.25 in 1930, but this is counterbalanced by an increase of 162,111 in the tonnage of beets used in 1930. This decrease in the price of raw materials is reflected in the market selling prices of the products as indicated by the average wholesale prices for each grade of sugar in the following summary table:-

Grades of Sugar		Average Wholesale Prices		Increase (+) or Decrease (-) Wholesale Prices
