DOMINION BUREAU OF STATISTICS
CENSUS OF INDUSTRY
OTTAWA - CANADA

Dominion Statistician: R. H. Coats, B.A., F.S.S. (Hon.), F.R.S.C.
Acting Chief, Census of Industry: A. Cohen, B. Com.

THE VEGETABLE PRODUCTS GROUP, 1928-1930.

In 1930, the vegetable products group of industries ranked first in importance as regards the gross value of production and cost of materials used, while in the number of people employed and salaries and wages paid it ranked only fourth. With the exception of rubber, coffee and spices, sugar factories and rice mills, the industries of this group are dependent mainly upon domestic farm products for their raw materials. In 1930, establishments assigned to this group numbered 5,041 with a capital investment in plant, equipment and working capital of \$569,403,769. These plants furnished employment to 84,182 people who received \$85,259,243 in salaries and wages and produced goods to the value of \$672,023,666, while the amount spent for materials amounted to \$357,510,340. This group occupies an important position in the industrial life of Canada; in 1930 it produced 19.6 per cent of the total manufacturing production and employed 13.1 per cent of persons engaged in the manufacturing industries. As may be seen from table 6, this group contributes a large number of important articles which enters into the export trade of Canada.

The flour milling industry is the leading industry of the group from the point of view of gross value of products. This industry, which has existed to meet the domestic needs for more than 300 years, is one of the Dominion's oldest industries, but it is only within recent times that its progress has become spectacular. The war and the demand it created gave a great impetus to this trade. The 383 flour mills, many of them of the most modern type and highest efficiency, have now attained a capacity far in excess of Canada's demands. During 1928, productive capacity reached about 121,000 barrels per day. Since then, the industry has been adversely affected by the difficulties which beset the Canadian grain trade and the great decline in the prices of grains. Exports of wheat flour declined from 10,737,266 barrels in 1928 to 7,514,778 barrels in 1930, and in spite of decreased exportations, Canada today is still one of the leading exporters of wheat flour.

The rubber industry is another industry of importance in the industrial life of the country. Canada now ranks among the leading countries of the world as a manufacturer of rubber goods. In 1930, Canada was the fifth largest importer of raw rubber in the world, ranking after the United States, the United Kingdom, France and Germany. Existing plants in 1930 numbered 47 and represented a capital investment of \$69,164,512 in plant equipment and working capital. These plants furnished employment to 15,163 persons who received \$15,895,479 in salaries and wages and produced goods valued at \$73,752,673. They also spent \$28,821,759 for raw materials mainly imported from tropical countries. This industry also forms an adjunct of considerable importance to the cotton yarn and cloth industry which supplies it with tire fabrics. As may be seen from table 6, the industry, besides supplying the domestic market, contributes materially to the export trade of Canada. The products of this industry find their way to the remotest parts of the world as a glance at the list of countries to which rubber tires are shipped would show. Spain, Peru, Dutch East Indies, Portuguese Africa and China are but a few of the far-flung countries into which Canadian tires find their way.

THE VEGETABLE PRODUCTS GROUP, 1928-1930.

The fruit and vegetable preparations industry which includes canned fruits, canned vegetables, pickles, vinegar, jams, etc., comprises another important industry of this group. In 1930, this industry reported an output valued at \$43,093,752, a capital investment of \$46,135,025 and an employment of 10,651 persons who received \$5,634,355 in salaries and wages.

The development of the canned foods trade has affected great change in the relation of foods to seasons. Fruits and vegetables of many kinds are to be had at all times of the year with much of their original freshness and flavour. The producers in the country are provided with an enormously extended market and the consumers in both city and country with cheap and wholesome food in great variety.

This industry has made rapid strides in the past few years. During the period of 1923-29 the volume of fruit and vegetable preparations produced increased 121.4 per cent. This growth is indeed remarkable as it represents a corresponding increase in the domestic demand of these products, the foreign trade being relatively small as compared with the domestic production. Imports in 1930 were valued at \$6,819,532 and exports at \$2,706,661. According to these figures, the industry supplies about 92 per cent of the domestic requirements.

The sugar refining industry is another large industry of this group. The demands created by the war also gave it a great impetus. All things considered 1919 was a record year. The number of persons employed (3,491), the value added by manufacture (\$16,321,882) and the exports (\$22,953,135) were the highest recorded, while the volume of sugar manufactured was only 10 per cent lower than that of the peak year 1925 when 11,714,967 cwt. were produced. Since 1925, however, exports of sugar have declined with the result that production and employment slackened considerably. In 1930, the 8 sugar refineries reported a capital investment of \$43,855,155 and a value of production of \$42,935,722. They also employed 2,281 persons who received \$3,560,260 in salaries and wages and paid out \$30,610,701 for materials. Exports of sugar in 1930 amounted to 218,150 cwt. valued at \$1,025,073.

The beverages industry--breweries, distilleries and wineries--which are important elements of the vegetable products group, have expanded from a production of \$30,000,000 in 1922 to \$87,000,000 in 1930, owing partly to the modification of prohibition laws in Canada and also to the fact that a large part of their production is exported directly or indirectly to the United States. The tobacco industry, another important factor in the vegetable products group, had a total production in 1930 of nearly \$86,000,000 and a payroll of 8,905 persons who received \$7,837,711 in salaries and wages.

Compared with the previous year there was a decrease of \$99,433,999, (12.9 per cent) in the value of production, 4,676 (5.3 per cent) in the number of employees, \$69,509,384 (16.3 per cent) in the value of materials used and \$29,924,615 (8.7 per cent) in the value added by manufacture. The industries of this group, however, were not as severely affected as these figures would indicate. Drastic declines in the values of raw materials with the consequent declines in the values of finished products account for the greater part of the decrease in the gross value of production. The decrease in the volume of production was only 5.6 per cent, the index dropping from 121.6 in 1929 to 114.8 in 1930.

Most of the industries of this group suffered declines in industrial activity. The industries manufacturing for the export market experienced the greater recession.

THE VEGETABLE PRODUCTS GROUP, 1928-1930.

The flour milling industry reported 635 fewer employees and a decrease in the value of production of \$32,769,805; while employment in the rubber industry decreased by 2,633 persons and the value of the output by \$23,181,987. The industries producing food products were not as severely affected. The canned fruit and vegetable industry actually reported an increase of 148 employees and \$3,498,590 in the value of the output while the bread and other bakery products industry reported an increase in employment although the value of the output was a little lower. Details of the increases and decreases in employment, capital invested and value of production are given in tables 4a, 4b and 4c.

THE VEGETABLE PRODUCTS GROUP, 1928-1930.

Alphabetical List of Products Manufactured by the Industries classified under the
Vegetable Products Group, 1930.

Note: This list includes only the products of the industries comprised in the Vegetable Products Group. In some cases, therefore, the amount shown is not the total production since some of the commodities listed are also produced in industries grouped under other classifications. Information on total production will be supplied on application.
