ICE CREAM PRODUCTION IN CANADA, 1930.

Ice cream as an article of food is of such growing importance that a separate monograph dealing with it appears to be warranted. It possesses all the elements of a real food being easily digested, palatable and highly nutritive.

The production of ice cream is carried on chiefly by the Dairy and confectionery industries whilst a further production is also reported by the baking industry. Statistics of production by quantity and value since the inception of the annual census of manufactures are shown for the above named industries in the following table. During this period covering 14 years the quantity produced increased by 173 per cent whilst the value increased by 227 per cent.

CONSUMPTION OF ICE CREAM BY PROVINCES, QUANTITY AND VALUE 1925-30

The per capita consumption of ice cream is shown by quantity and value in Table 3 for Canada and the provinces for the calendar years 1925 to 1930. The per capita consumption rose from .63 or 3/5 of a gallon in 1925 to one gallon in 1930 or an increase of 66.6 per cent. The provinces showing the highest per capita consumption were Nova Scotia, Ontario and British Columbia with 1.42, 1.30 and 1.02 gallons respectively whilst the lowest per capita is shown by Prince Edward Island and Saskatchewan with .60 and .61 gallons respectively. The cost per capita for the Dominion rose from 86 cents in 1925 to \$1.30 in 1930 or an increase of 51 per cent, a like increase existing for each province during the period.
