

Statistics Canada Statistique Canada

Price: 20 cents, \$2.00 a year

**PRODUCTION, SHIPMENTS AND STOCKS ON HAND
OF SAWMILLS EAST OF THE ROCKIES**
(Excluding Newfoundland, Manitoba and
Prince Edward Island)

Sawmills in Nova Scotia, producing less than 1,000 M ft.b.m. per year, and sawmills in New Brunswick, Quebec and Ontario, producing less than 2,000 M ft.b.m. per year, are excluded from this survey. For these small mills, and any larger mills that fail to report, production is estimated on the basis of the figures for the previous month and the rate of increase or decrease in production of the reporting mills. Initially the production of non-reporting mills has been estimated on the basis of their known production in previous years and the rate of increase or decrease shown by reporting mills. Stocks are estimated from total estimated production figures on the basis of the assumption that total stocks/production ratio equals the stocks/production ratio of the reporting mills. For Saskatchewan only the Saskatchewan Timber Board and the few relatively large independent mills are asked to report. For the numerous small mills in Saskatchewan production is estimated on the basis of a fixed ratio between their collective production and the production of the S.T.B., established by the Forestry Branch of the Department of Natural Resources. It is assumed that these small mills do not hold any stocks of lumber. The data for Alberta are established by the Alberta Bureau of Statistics, in co-operation with the Department of Lands and Forests and the Alberta Forest Products Association. The co-operation of all participating parties is acknowledged gratefully.

The species distribution of estimated production and estimated stocks is based on the species distribution of reported production and reported stocks in the same province.

Table 3 gives the distribution of shipments reported by sawmills and planing mills. It is to be noted that the reported destinations are not necessarily final destinations. Undoubtedly part of the lumber shipments is subsequently redistributed and shipped to other destinations than those reported by the manufacturers. The reported shipments also include sales to other sawmills and planing mills that are included in this survey. The subsequent shipment of this lumber by the purchasing mills is again included in the reported shipments. This leads to duplication in the figures for shipments by destination. However, the total of reported shipments and estimated shipments and adjustments is free of duplication because this figure is calculated from the estimated total production and the estimated total stocks, both of which are free of duplication. The quantities of lumber purchased by reporting mills from other mills are shown in Table 5.
