## RETAIL CONSUMER CREDIT JULY 1945 TO DECEMBER 1948

This is the third bulletin containing the trends in retail consumer credit in ten major credit dealing trades.

Figures are in the form of indexes based on 1941 Census of Merchandising and Services establishments.

Sales are divided into cash, instalment and charge account transactions, totalled over half year periods. Receivables are broken down into instalment and charge accounts due at the end of the half year periods.

The next bulletin will contain six added trades - food stores, country general stores, feed stores, fuel dealers, garages and filling stations.

Retail Consumer Credit in 1949 wlll be published each quarter.

## HIGHLIGHTS

1. Although cash, instalment and charge sales gained in the latter half of 1948 as compared with the same period in 1947........
2. The post war trend toward smaller gains in cash than in credit buying was continued..
3. However, after steady losses as a percentage of total sales from 1945 to the first half of 1948, cash sales in the latter half of 1948 rose from 60.3\% to $62.5 \%$ of total sales.

4. Dollar volume of both charge account and instalment receivables rose in all trades (a low of $7 \%$ in hardware and a high of $42 \%$ in furniture stores).
5. In 4 of the 5 main instalment trades, indexes of accounts receivable piled up more rapidly than sales, causing a lengthening in the number of days credit outstanding ...

## CONSUMER CREDIT TRENDS IN I948.....

## Change in Indexes from 1947

Total cash and credit salos of the ten trades gained 7.8 per cent in the last half of 1948 over the same half of 1947. When analyzed by type of credit transaction, the increase represented a gain of 6.6 per cent in cash sales, 15.1 per cent in instalment sales and 11.5 per cent in charge account sales. The trend toward smaller gains in cash than in credit buyine which had been evidenced since the end of the last war was maintrined.

Four trades transeotod lasa ash bawinese in the 2 atter half of 1948 than during the same period of 1947 while two trades cutended less charge account business. Increased instalment sales were reqistered in all trades inrine the last half of 1943.

In comparing the indexes of 1948 with the previous year it is of interest to note that the increases in the latter half of 1948 over the same period of 1947 were smaller than those in the first half. During the first part of the year cash sales remained at 6.6 per cent above 1947, instalment sales had jumped 24.4 psz cent while charge account sales at 10.7 per cent were alightay below the increase for the latter hate.

Receivabies or accounts outstanding for all trades combined as calculated from preliminary tabulations were 20.4 per cent above the 1947 level at December 31, 1948. Showing smaller gains over 1947 than the receivables at June 30, 1948, the year end rise of 20.4 per cent represented a 31.9 per cent gain in instalment receivables and a gain of 10.4 per cent in charge accounts receivalile.

Total accounts receivable were higher in ail trades at the end of 1948 , than at the end of 1947 ranging from a gain of 6.8 per cent in herdware stores to one of 42 a per eent in fomiture stores.

## Change in Proportions of Cash and Credit Dealing

After reaching a low of 60.3 per cent of total sales in the first half of 1948, cash sales moved upward for the first time since 1945 to absorb 62.5 per cent of sales in the latter half of 1948. Charge account sales at 23.2 per cent of sales were the lowest in proportion since 1941. Instalment sales rose consistently from 7.9 per cent of total sales in 1945 to 14.3 per cent during the last half of 1948.

Th most trades, instalment sales, which were nost affected Dy wartine regulations, have shown marked recovery. In department stores the ratio rose from 6.2 per cent of total sales in the last half of 1945 to 10.7 per cent in the same period of 1948, almost level with the 1941 average of 10.9 per cent. Instal..int sales of juwellery stores surpassed the 1941 average ratio in the last six months of 1948.

Receivables foilower the same pattern in composition as Qsa credit sales. With increasing ratios of instalment sales, raceivables from instalment sales also expanded proportionately with corresponding reduction in the proportion of outstandings from charge accounts. From a ratio of 60 per cent of total receivables for combined trades at December 31, 1941, instalment receivaisles fell to 35 per cent at June 30, 1946 but by the end of 1948 aed recovered more than half of the loss and stood at 50 per cent. of the ten trades, jewellery stores alone had proportionately more lastalmant xousivables as the and of 2918 than at tie ouc of 1941.

## Dresoregt outatancias

The trend of an increasing number of days credit outstachag fion credit accounts was generally continued in 1948. This increase slowed down somewhat in the latter half of the year, howकvar. The number of days credit outstanding from instalment sales was greater in all trades during the first half of 1948 when com= Dared to the same period of 1947 with an average increase of 23 days(1). During the latter part of the year only five trades showed gains over 1947 and four decreases, resulting in an average increase ol only 4 days over the same pervica ar 2347.

Similarly, the length of time for repayment of charge accounts increased during the first half of 1948 with an average of 6 days more than for the same period of 1947. In comparison, the latter half gained only an average of 2 days with 6 of the 9 trades showing increased number of days credit outstanding.

In the latter part of 1948, days credit outstanding ( 83 days) from charge accounts in jewellery stores equalled the 1941 average and department stores ( 77 days) alnost reached the 1941 level ( 79 days). Days credit outstanding from instalment sales in men's clothing stores surpassed the 1941 figure in 1948. This is not overly significant because instalment sales are of minor importance in this trade and the increase may be due to a growth of instalment credit durine the latter nart of 1948 anc 1948.
hotor vehicle dealers were onitted from the calculation of salesmeceivables ratios and days credit outstanding because of the sale of instalment paper to finance companies for which outgtecuing acouncis aro not known.

## THE SURVEY.........

Originally undertaken by the Wartime Prices and Trade Board to observe the effect of consumer credit controls which were introduced in Octover 1941, the survey was taken over by the Bureau. from the lest half of 1945 .

Wertime Prices and Trade Board studies were limited to storn which did a substantial amount of credit business in five vetail trades and covered the interval Jan. I, 1941 to June 30, 1945 by half-year periods. When the survey was continued by the Dominion Bureau of Statistics, it was extended to cover ten retail trades and the methods chanced so as to provide ropresentative coverage of all stores wataiu those brades. Tha trelas ssiostst waves

> Cepartinent Stores Mon's Clothing Stores Women's Clothing Stores Ferijly Clothine Stores Turrens

> Housenold Appliances and Radio Stores
> Furniture Stores Hardware Stores Jowellery Stores Motor Vehicle Denlers
oy zacindiag businasses of zereatar cash owposition tha nos sampid was designed to conform to the 1941 Census cash-credit pattern. the ten trades were first surveyed for the period July 1945 to December 1947 and results published in 1948. A further bulletin carried the trends up to June 1948. Because of the change in the sample, data from the Wartime Prices and Trade Board surveys were put divectiy comparable to those derived by the Bureau.

Because almost complete coverage of department stores was ascuren, hovever, trends for this trade are available from 1941, 2. though revisions in 1945 produced certain inconsistencies between the earlier and the more recent series.

The study was conducted on a quarterly basis beginning in 1940 nut results are published on half-yearly trends to continue the comparison with former periods. From the first quarter of 1949 the sonsumar credit series will be further improved by
(1) Addition of several added kinds of business, as indicated on page 5 .
(2) Quarterly publication of indexes.
(3) Purthes parinameuta in the bample.

METHODS........

This report contains inuexes or sales and receivables and percentage composition of sales and receivables. The indexes of cash, instalment and charge sales are based on 1941 (average halfyear $1941=100$ ) and the indexes of instalment and cherge recoivatios are based on December 31, 1941 as 100.
 and with only a full year's figure available the half-yeur base for current periods was obtained by dividine the 1941 figure hy 2. Because of this average base, indexes shomm meflent sasonal verie. thons for waica no alljutment has been hacia.

Al though taken quarterly in 1948, the first two and last two quarters were combined in order to present a continuity of trond with previous half-year periods. The last half of 1948 is subject to revision but will be final in the next quarterly report. The 1948 quarterly figures are net pabliches ne such becouse they larsedy reflect seaconal variations.

The ratio of selos io recalvecias was outained oy dividing the dollar volume of the respective accounts receivable of the res' ponding firms at the end of the period into the dollar volume of their respective sales durine the neriod. The number of days credit outstacising is the xasuit of dividing theso ratios 2 mo 380 , Ayse).

The combined trades totals were ontained uy weighting tha indexes and composition percentages of the different items by the weight of the respective type of sale or receivable for each kind of business as shown in the 1941 Census results. For instance, the sales of men's clothing stores in the 1941 Census formed $5.1 \%$ of the sales of the ten trades. This weight was applied to the men's clothing total sales indexes for all subsequent periods under review. The other kinds of business weights, in relation to the total for the ten trades, were applied to their respective total sales indexes. The surn of the results for each period was then divided by 100 to obtain the weighted index. Cash, instalment, and charge sales for each trade likewise had their own weieghts, taken from the 1941 Census.

It was found necessary to increase the sample in all except department stores because of depletion which had occurred since the original selection. From an increase of some 650 firms, good reports were received from approximately 500. The addition of these firms to the original sample caused little change in the continuing trends. They were selected on a geographical and business-size basis to keep the sample as representative as possible. In only one or two instances did they materially change sales or receivables composition and in those cases the new combined result was closer to the census pattern than the former sample. The 1941 composition of sales as shown in previous reports has been revised to show the 1941 composition of the revised sample. Similarly the salesreceivable ratios for 1941 and the days credit outstanding for 1941 have been revised slightly to make the current results of the new sample directly comparable to 1941.
