\title{
VENDING MACHINE OPERATORS
}

1958

\section*{(Firms or Individuals Who Operate Automatic Vending Machines in Other Than Their Own Premises)}

\section*{Introduction}

This survey of the operators of automatic vending machines is the first attempt by the Dominion Bureau of Statistics to collect information on this significant development in retailing for publication purposes.

The distinctive characteristic of automatic vending is the completion of a sales transaction without the aid of a sales clerk or cashier. It requires only the insertion of coins into the machine.

The field of automatic merchandising can be divided into four broad types of activity; manufacturing, distributing, operating and supplying. Since this survey was initiated primarily for the collection o: information on the sales of merchandise through automatic merchandising machines, only vending machine operators as defined below were surveyed.

\section*{Definition}

Because of the complexities involved in developing an adequate definition of a vending machine operator, a pilot study was undertaken during 1958, covering 1957 operations.

The results from this study indicated that practical considerations would make it necessary to develop a definition of a vending machine operator which would create a universe which could be readily surveyed. It is well known that there are many vending machines being operated by individuals and firms on their own premises. To have accepted this large number of individuals and firms as operators would have created a universe which would have been very difficult to survey, since such a step would have made it necessary to survey all retail, wholesale, service and manufacturing concerns as well as a variety of other institutions. Therefore, in consultation with representatives from the vending machine industry, it was decided, that for purposes of this survey, a vending machine operator would be defined as follows:
"an individual or organization who owns (or rents), locates, services and repairs (on own account of on a contract basis) venders with
the right vested in the firm to withdraw monies from the venders. The venders must be located on the premises other than those of the "operator" except in the case of incorporated subsidiary firms whose function it is to operate venders on the premises of the parent company.'

This definition excludes unincorporated divisions of major companies which have been established for the prime purpose of operating concessions (including vending machines) solely on the premises of the parent company. If these unincorporated divisions however have located venders in other premises as well, the firm comes within the definition of a "vending machine operator".

The users of these statistics should, therefore, bear in mind that this survey covers only the operations of vending machine operators as defined above and is not to be construed as an estimate of total sales through all automatic vending machines in operation during 1958.

\section*{Collection}

The list of vending machine operators was obtained from various sources such as the Canadian Automatic Merchandising Association, distributors and suppliers in the vending machine industry as well as various trade papers; their assistance is gratefully acknowledged.

It should be mentioned that questionnaires were sent to approximately 600 soft drink plants and bottlers. The returns indicated that the majority of these firms were not operators of automatic vending machines as defined above. The relatively few firms who did fall within the operating universe did so for only short periods of time since the function of an operator was usually undertaken only when the bottler had difficulty in renting or selling the venders in his possession. Because of the difficulty of collecting sales data from such firms as well as the fact that operating was in reality a negative function, these bottlers and plants were excluded from the survey. Some bottlers were retained in the operating universe if the information indicated that the operation of venders was on a continuous basis.

As this is a new survey, any changes or adjustments to current data brought about by fuller coverage or additional information will be published in next year's report.

\section*{Summary of Results}

During 1958, there were 329 firms operating 27,052 automatic vending machines. The sales through these machines amounted to \(\$ 22,573,451\), this figure being the actual number of dollars withdrawn from the machines by the operators. Any location rentals or commissions that an operator may have received through the leasing of his own mamachines are not included in this amount.

In order to give a comprehensive picture of the operating universe, it has been decided to stratily operators into two broad categories (1) full-ting operators - individuals or firms who are engaged in vending as their sole activity and (2) part-tiate operators - individuals or firms for whom the operation of automatic merchandise vending machines does not represent their principal activity or business but serves only as an additional source of income.

The following table indicates that 50.5 per cent of the operators engaged in vending did so on a part-time basis only. These firms accounted for 43.4 per cent of the total sales. The remaining 163 full-time operators registered sales of \(\$ 12,779,202\) or 56.6 per cent of the total.

Legal Organization of Vending Machine Operators, 1958

\hline Total all operators & 329 & 27,052 & \(22,573,451\) \\
\hline
\end{tabular}
- As defined in this report.

It is interesting to note that the large percentage of sales registered by part-time operators was
due primarily to the number of wholesaling firms engaged in automatic vending.

\hline Other & 315 & 3.4 & 106,399 & 1.1 \\
\hline Total & 9,355 & 100.0 & 9,784,249 & 100.0 \\
\hline
\end{tabular}
\({ }^{3}\) As defined in this report.

The above tables indicate that both the fulltime and part-time operators derived their largest volume of sales from the vending of cigarettes, colfee, tea, hot chocolate and soft drinks (paper (Lus); these goods accounting for 81.3 per cent of tas sales of the full-time operators and 84.5 per ce:t for the part-time operators.

Although the data in this report are on the sales of food and tobacco by automatic merchandising, the "other" category in the above tables includes the sales of some non-food items such as fuel, ice, combs, etc. It is hoped that in the future, this survey can be extended to include specific information on the sales of non-food items through venders.

Operators were requested to submit information on the dollar volume of sales by specified locations. It was found, unfortunately, that many firms did not keep such records. Only 68.7 per cent of the full-

operators were able to supply this type of breakdown. However, the response was sufficient to give a relatively accurate description of salos by location on a percentage hasis.

Percentage Distribution of Sales by Location, 1958

\section*{Full-Time \({ }^{2}\) and Part-Time \({ }^{1}\) Operators}
(Firms operating venders in other than their own premises)
\begin{tabular}{|c|c|c|}
\hline Location & Full-time operators & Furt-time operators \\
\hline Railway stations & 0.1 & 0.3 \\
\hline Bus terminals ........................................................................................ & 0.6 & 0.3 \\
\hline Theatres .................................................................................................... & 6. 3 & 8.3 \\
\hline Schools .................................................................................................... & 2.6 & 0.3 \\
\hline Army-Navy-Atr Force bases .................................................................... & 0.8 & 1.6 \\
\hline Industrial plants ..................................................................................... & 55.9 & 21.7 \\
\hline Fire and Police stations ....................................................................... & 0.2 & 0.2 \\
\hline Summer resorts ......................................................................................... & 0.2 & 0.1 \\
\hline Offices ................................................................................................... & 5.2 & 1.3 \\
\hline Hotels .................................................................................................... & 3.9 & 17.0 \\
\hline Hospitals ................................................................................................. & 0.7 & 2.0 \\
\hline Motels ...................................................................................................... & 0.1 & 0.4 \\
\hline Gas stations .......................................................................................... & 5.4 & 4.2 \\
\hline Restaurants .............................................................................................. & 8. 6 & 34.6 \\
\hline Department stores & 3.1 & 1.6 \\
\hline Other .................... & 6.3 & 5.9 \\
\hline Total ........................................................................................................ & 100.0 & 100.0 \\
\hline
\end{tabular}
\({ }^{2}\) As defined in this report.

As can be seen from the above table, full-time firms obtained the largest volume of sales from industrial plants ( 55.9 per cent); with restaurants ( 8.6 per cent) and theatres ( 6.3 per cent) falling in second and third position respectively.

On the other hand, firms who operated venders on a part-time basis derived their largest volume of sales from restaurant locations ( 34.6 per cent) with industrial plants placing second (21.7 per cent) and hotels ( 17.0 per cent) in third position.

It is interesting to note that of the 27,052 vending machines being operated by vending machine operators, 23,070 machines ( 85.3 per cent)
were American-manufactured, 3,619 machines (13.4 per cent) were Canadian-manufactured and the remaining 363 machines ( 1.3 per cent) were manufactured in other countries.

It is expected that in addition to the foregoing information data on employment and salaries will be published in the 1959 report on vending machine operators.

Additional information is given in Tables 1 and 2.
