## UKFINITICNS

NLT SAIES represent the real volume of business done. hilowences and a... counts eranted to customers and value of €oods returned by customers aro deducted from gross seles, but seles of meals or lunches provided employees and any goods withdrewn by the proprietor for personal use are incluaed.

GROSS TRADIG FROFIT OR MARGIN is the difference between the cost of merchanaise sold and the selling price. The cost of merchandise sold is calculated by adinge the beginnine inventory to net purchases and deducting ending inventory.

CEEFATING EXPMNEES are the Emounts paid out for any ariu abl expenses incurred in operatine a business, except the cost of morchandise. They include:

Salaries and wages paid to employees before deduction of income taxes or unemployment insurance. Froprietore" salaries or withdrawals are not included.

## Suvertising

Stoze supplies used in the business durine the year such as: wrappire paper, ofrice supplies, easoline anu oil for delivory trucks:

Ioss on bui debts in the year - amount written ori less bau uebts recovered.

Taxes end insurance $=$ business, property anc water taxes, licences includice truck licences, insurance premiums carried for the protection oi the business: Income taxes are not incluaed.

Hentals - for premises used only in the business.
Heat, 2ikht, and power used in the year.
Repairs and muintenarice - incurred for the purpose of keepine fixed store ussets in efficient operation, jncludinc delivery equipment.

Deprecirtion allowances to cover cecreases in the value of fixed store assets including delivery equipmert.

A11 Other expenses - telephone, telegraph, postage, benk wharets. legal, collection and auditing fees, etc.

NET PROFLT is the difference between gross marein and total expenses, and includes proprietors' salfries and withurawals.

STOCK TURNCVELis the number of times in a year that the merchandise is sola and replaced. The average of the begianing and year ending inventories is dividec into the cost of merchanuise.

CUSTONENS" ACCOUTS CUTETANDING are all accounts receivable on the books at the end of the yesr.

## Introduction

This report is che of a series reviewing average operatine results for 1945, und covers reteil filline stations and garaees. In 1944 a similar survey was carried out for a dual purpose; to provide an estimate of the contribution made to the nationul income by unincorporated retail stores; and to provide reliable statistics on operating costs in retall trade. The average results presented in this report were obtained from stores whose individual profits and expenses vary considerably. Therefore, if the results of an individual store ao not coincide with the averages, it does not follow that the store is beine operated inefficiently.

The tables, however, may assist the merchant in decidine where economies may be most effective and may indicate the need for additional expenditures in other phases of business operation to meet chancine conditions. Repairs or replacements of fixed assets and equiphient, not available during war years, nay now become a necessity. The resuming of prewar services such as deliveries and credit, may be necessary to keep up sales volume in face of otherwise declining sales. With the possibility of more competition. unstable prices and greater expense outlay, these basic operating ratios may be of use in plannine for changed conditions in the retail field.

The ultimate objective of business is to realize a net profit on operations. This mikht be the first iter of comparison an individual owner makes with his own resuits. If his net profit is greater than the average shown for his particular business in this report, he may gain further by item-by-iten comparison of his operating costs with those in the tables. If his net profit is smaller than average, a careful check should be made on his different expense items, using the averages skown as a guide in deter" mining which items require investigation. In this way improvement in eross margin or a lessenine of expenses may be accomplished to result in a ereater net profit.

The prospective new entrant may find much information useful in plannine his inventory outlay, expected rate of stock turnover, and verious axpenses such as salaries, adivartising, rentals and so on.

Definitions of the torms used in this report and the components of the aifferent expense items are Eiven on page do bhen making comparison with other results, allowarce should be made for any aifference in cefinttions. When makine comperisons of preseat aay results with this report, allowance should elso be made for any econonic chatees which have occurred since 1945. Chain stores were not included in this survey.

## SUIMARY

Some of the significant features in the operation of retail filling stations and earages in 1945 are noted below.

## Filling Stations

1. Filling stations realized a wider gross marein in 1945 than in 1944, the respective ratios beine 17.9 per cent and 16.5 per cert. A higher ratio of expenses, especially salaries, offset the 1945 mareinal advantace to result in a sliehtly smaller net profit than was realized in 1944. siverage net profit of filling stations in 1945 was 7.1 per cent as compared to 7.3 per cent in the previous year. (See table l).
2. Though gross margin ratios were irrecular over the different size rances, net profit ratios decreased consistently as the volume of business expanded. Reflecting an increase in ratio of salary expense, total expenses were creater in the larger filling stations. (See table 3, pake 7).
3. Filling stations operating in rented premises, obtained wider gross mareins than those operatine from owned premises. Total expenses in rented premises were ereater, reflecting rent expense and higher sulary cost. No consistent differences appeared in net profit ratios of owned and rented stations. (See table 3, pace 7).

Table 1. - Operating Results of Filling Stations
(With 1944 percentages for comparison)

| Net profits before deduction of proprietors' salaries and income tax ............ | 2,324 | 7.1 | 7.3 |

## Garages

2. Ir 1945, garages for the repair of motor vehicles and for sale of parts, accessories, easoline, oil and grease operated on a eross profit of 27.9 per cent as compared to the 1944 eross mareir of 26.7 per cent. A greater expense ratio in 1945 reduced this advantage to only slightly greater net profit 1945, 9.3 per cent and 1944, 9.0 per cent. (See table 2).
3. Although gross profit ratios were irregular over the different size ranges, net profit ratios showed a consistent decrease with expandine sales volume. A kith ratio of selary expense reflected the repair work which formed approximately 24 per cent of net sales. While the ratio of salary expense increased with sales volune, other expenses generally decreased in ratio in the larger garages. (See table 4, page 9).

## GENERAL DISCUSSION AND TABLES

## Filling Stations

Filling stations are eneaged principally in selling easoline and oil. accessories, tires and tubes. To remain in this classification, reprirs should not form more than 25 per cent of net sales and gasoline and oll must account for 75 per cent of total merchandise sales. Usable reports were received from 515 filline stations. hhen classified by size of business and occupancy basis there were too few establiabments in rented premises with sales less than $\$ 10,000$ and in both owned und rented eroups with sales over $\$ 100,000$ to allow publication of average results.

## Trends by Size of Business (See table 3, pace 7)

While eross profits were irregular in ratio to net sales, a proportion of expenses expandine with sales volume resulted in decreasine net profit ratios. Because of business volune, the smaller net profit retios in the larger businesses actually represented ereater dollar value net earnings. Other than in salary expense where an upward trend in ratio was evident, aud in light, heat and power where a declinine ratio was shown, no significant change took place in expenses over the different size ranees.

Stocks on hand at the end of the yeur were ereater than at the beginning in every size and occupency class shown. ifith one exception, the rate of stock turnover increased with sales volume; in rented premises from $17=3$ times per year to 32.0 times; in owned premises from 13.5 times to 27.3 times.

## carace

Gadates $1 n$ this siassifudition are those which difgt be termed "merchendising" as apart from "service" garages. If the receipts from repairs or other services formed more than 50 per cent of total sales, the business was not included in this classification. The average garage included in this report showed receipts from services as 23,7 per cent of total sales.

Usable reports ware received from 240 such garages. When classified by size of business and occupancy basis there were too few in the $81 z e$ class of over $\$ 100_{5} 000$ sales and in rented garages with sales less than $\$ 10,000$ to allow presentation of average results. Comparable information for previous years other than 1944 is not available。

## Trends by size of Business (See table 4, page 9)

Although gross profit ratios were irregular over the different size rances, a ratio of total expenses increasine with sales volune resulted in a diminishing net profit ratio。 This smaller net profit ratio in the larger garages actually represented ereater dollar value net earnings because of the greater business volune. While the ratio of salary expense increased considerably with sales volume, most of the other expense items showed minor declines in ratio.

Stocks on hand at the end of the year were greater in every class shown than at the beginning. With one exception the rate of stock turnover increased with expanding volume of business. In owned premises the turnover ranged from 6.9 times per year to 10.3 times and in rented earages from 10.0 times to 15.3 times.
