# OPERATING RESULTS AND FINANCIAL STRUCTURE RETAIL FOOD STORES - 1950 

Published by Authority of the Rt. Hon. C. D. Howe
Minister of Trade and Commerce

## NOTICE

The Industry and Merchandising Division of the Bureau of Statistics collects and compiles Agures on (a) the primary industries in Canada - mining, forestry, and fishing: (b) manufacturing; (c) construction; and (d) merchandising and services.

For the purpose of arnual compllation and publication, reports on merchandising and services have been classifled as follows:

## Part I - Wholesale Statistics

A Wholesalle Trade, 25\$.

- B Operating Results of Food Wholesalers, $25 \phi$.
* C Operating Results of Dry Goods, Piece Goods, and Footwear Wholesalers, 25\$.
- D Operating Results of Miscellaneous Wholesalers (automotive equipment, drugs, hardware, plumbing and heating equipment), 25¢.

## Part II - Retall Statistics

E General Review, 25\$.
F Retall Trade, 504.
$G$ Retall Chain Stores, 50t.

* H Operating Results of Chain Food Stores, 254.
- I Operating Results of Chain Clothing Stores, 25 ¢.
- J Operating Results of Miscellaneous Chain Stores (variety, drug, furniture), $25 \$$.

K Operating Results of Retall Food Stores, 25¢.
L Operating Results of Retall Clothing Stores, 25 \%.
M Operating Results of Retall Hardware, Furniture, Appliance, and Radio Stores, 254
N Operating Results of Filling Stations and Garages, 25\$.
O Operating Results of Miscellaneous Retall Stores, 254.
P Retall Consumer Credit, $25 \$$.

## Part III - Services and Special Fields

Q Laundrles, Cleaners and Dyers, 254.
R Motion Plcture Theatres, Exhibitors, and Distributors, 25\$.
s Hotels, 25 .
T Sales Financing, 25 \$。
U Farm Implement and Equipment Sales, 25 t.
V New Motor Vehicle Sales and Motor Vehicle Financing, 25 ¢.

The reports are punched to permit of filing in a ring binder.

* Biennial reports - not issued for 1950.

## DEFINITIONS

## Profit and Loss

Net sales - represent the dollar volume of business done. Allowances and discounts granted to customers and value of goods returned by customers are deducted from gross sales, but sales of meals or lunches provided employees and any goods withdrawn by the proprietor for personal use are included.

Gross profit - is the difference between the cost of merchandise sold and the selling price. The cost of merchandise sold is calculated by adding the beginning inventory to net purchases and deducting the ending inventory.

Operating expenses - are the amounts paid out for any and all expenses incurred in the operation of a business, except the cost of merchandise. These include:

Salaries and wages (except delivery) - paid to employees before deduction of income taxes or unemployment insurance. Proprietors' salaries or withdrawals are included in Net Profit (in unicornorated store operations).
Taxes and Insurance - business, property and water taxes, and insurance premiums carried for the protection of the business. Income taxes and other taxes collected for remittance to governmental bodies are not included.
Rentals - monies paid for premises used only in the business.
Heat, light and power expenses - amount paid for these used during the year.
Delivery expense - includes salaries paid to delivery men, truck repairs and maintenance, depreciation, licences and insurance on delivery equipment and supplies used in connection with delivery (gas, oil, etc.).
Repairs and maintenance - incurred for the purposes of keeping fixed store assets operating efficiently (excludes capital expenditure).
Depreciation - allowances to cover decreases in the value of fixed store assets.
Store supplies - used in the business during the year - wrapping paper, office supplies, etc.

## Advertising

Loss on bad debts - during the year - amount written off less old debts recovered.
Other expenses - telephone, telegraph, postage, bank charges, legal fees, collection and auditing fees, etc.

Net Profit - is the difference between gross margin and total expenses, and includes proprietors' salaries and withdrawals before income tax deductions.

Stock turnover - is the number of times in a year that the merchandise is sold and replaced. The average of the beginning and year ending inventories is divided into the cost of merchandise sold.

## DEFINITIONS

## Balance Sheet

## Assets

Cash on hand - and in the bank represents the amount of cash at the end of the year.
Net accounts receivable - are all notes and accounts owing to the business at the end of the year less any reserve for doubtful accounts.

Merchandise inventory - represents the cost value of merchandise on hand for resale but does not include store supplies on hand.

Other current ass ets - includes assets which may be converted into cash, if necessary, within a reasonably short time, such as prepaid insurance, office and store supplies, Dominion of Canada Bonds.

Fixed assets (net) - is the book value of land, buildings, fumiture, fixtures and equipment less any reserves for depreciation. Separate figures are shown for assets used in the business and those not used in the business.

Other assets - Investments of a permanent nature not readily converted into cash and intangibles such as goodwill.

## Liabilities and Net Worth

Current liabilities - are obligations which must be paid in the near future and represent accounts recelvable or any item that may be considered as a direct lien against current assets.

Fixed liabilities - mortages secured by fixed assets and separated, as are fixed assets, between those used and not used in business.

Other liabilities - long term notes, accrued expenses such as taxes or rent due but not yet paid, and prepaid or deferred income.

Capital stock - applicable to incorporated companies, represents the investment account of the stockholders in the capital shares of the corporation and does not exceed the amount authorized.

Surplus - applicable to corporations, includes earned surplus from operating profits, canital surplus from premiums received on the sale of capital stock, and surplus reserves.

Net worth - is the difference between total assets and total liabilities. This is composed of stock and surplus in the case of incorporated companies and in unincorporated businesses represents the proprietor's or partner's equity including undivided profits.

# OPERATING RESULTS AND FINANCIAL STRUCTURE RETAIL FOOD STORES - 1950 

## INTRODUCTION

A yardstick of performance is a useful gauge in assessing the success of endeavour. When that yardstick takes the form of a statistical summary of the average operating experience of retail stores, it may not constitute an ideal pattern of operations which all retailers should set as a goal, but it does represent a reasonably useful standard by which the retailer may ascertain whether or not his operations are being conducted as effectively, economically and profitably as those of the trade in general. To the merchant whose profits are below average, the operating results summaries may help to disclose the reasons which account for this situation. Reflection and consideration on the part of the merchant make it possible to decide whether his operating methods should be altered or whether the situation is normal in the light of conditions peculiar to the locathon of his business.

There is grown! evanonce that independent retail merchants are making more advantageous use of the results shown in the biennial operating results bulletins issued by the Dominion Bureau of Statistics. Many accounting firms whose clientele includes retail merchants have shown an interest in these series.

A number of trade papers and business periodicals have reproduced and interpreted the results of previous studies with the object of illustrating to retail merchants the manner in which operating results can be used as a tool in store management. This is a practice the Bureau is pleased to encourage, since it meets with one of the most important objects in maintaining this series, namely the promotion of improved merchandising on the part of retailers.

Statistics derived from other sources have shown that the mortality rate of business is much higher among new entrants into the field of retailing than among those established for five years or more. There are many reasons for this, some of them associated with the natural incompetence of the initiate retailer which could not be completely overcome by means of operating statement analysis. It Seems reasonable to suppose, however, that failure 1 in many cases is the result of inadequate knowledge on the part of new proptretors of the true fiscal requirements involved in operating a business and the proper allocation of costs. Where capital is
limited, as is often the case in a newly-established store, it would seem that most careful attention should be given to maintenance of proper records and provision be made to check against some such standard performance as these publications provide.

This report deals with independent retail food stores. Separate figures are given for:

1. Grocery stores
2. Combination meat and grocery stores
3. Meat markets
4. Fruit and vegetable stores
5. Confectionery stores

There are analysis of:
i. profit and loss statements
2. halance sheets

Profit and loss data are shown for owned and rented stores separately, and for various salesize classes.

Balance sheet data, which was added in 1948 , is continued in this 1950 study. This information is presented by size and occupancy groups for stores with $\$ 20,000$ or more annual net sales. Where possible, a further breakdown has been made between businesses in operation less than 10 years and those in business 10 years or more. An important change from the 1948 data is the segregation of fixed assets and fixed liabilities between those used in the business and those not used in the business. This makes possible a better relationship between fixed assets and the sales produced by those assets than was possible when all fixed assets of the proprietor were reported as one item.

The same basic sample of firms is used in this series although the sample varies slightly in each survey year. There is, however, a high degree of continuity among the respondents and is believed that no serious distortion arises out of any change in responding firms. For the most part, successive surveys have provided an increasing response rate, an encouraging feature from the standpoint of accuracy and, it is believed, an indication of the growing realization on the part of merchants of the value of these statistics.

## COMPARISON OF MAIN ITEMS BY TRADES

Average Gross and Net Profits, 1938, 1941, 1944, 1945, 1946, 1948, 1950

| Year | Grocery |  | Combination |  | Meat |  | Fruit and Vegetable |  | Confectionery |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Gross <br> Profit | $\begin{gathered} \text { Net } \\ \text { Profit } \end{gathered}$ | Gross <br> Profit | $\begin{aligned} & \text { Net } \\ & \text { Profit } \end{aligned}$ | Gross <br> Profit | $\begin{aligned} & \text { Net } \\ & \text { Profit } \end{aligned}$ | Gross <br> Profit | $\begin{aligned} & \text { Net } \\ & \text { Profit } \end{aligned}$ | Gross Profit | $\begin{aligned} & \text { Net } \\ & \text { Profit } \end{aligned}$ |
|  | (Percent of net sales) |  |  |  |  |  |  |  |  |  |
| 1938 | 16.0 | 4.5 | 17.4 | 4.1 | 22.4 | 5.6 |  |  |  |  |
| 1941. | 15.2 | 5. 7 | 16.9 | 5.2 | (Not available) |  |  |  |  |  |
| 1944 ..... | 14.2 | 6.3 | 15.2 | 5.8 | 17.1 | 6.0 | 16.4 | 6.6 | 19.5 | 9.6 |
| 1945 .... | 14.1 | 6.1 | 14.9 | 5.0 | 16.9 | 6.0 | 16.0 | 6.6 | 20.7 | 10. 1 |
| 1946 ... | 14.3 | 6. 0 | 15.1 | 4.8 | 17. 2 | 5.8 | 16.1 | 6.5 | 18.9 | 8.8 |
| 1948. | 14.0 | 5.7 | 14.6 | 4.4 | 16.6 | 5.5 | 17.5 | 6.5 | 19.1 | 8.5 |
| 1950 . | 14.4 | 5.2 | 14.9 | 4.1 | 16. 1 | 5.0 | 17.5 | 5. 9 | 18. 2 | 7.5 |

The 1950 net profits of food stores continued their decrease in relation to sales from the 1944 and 1945 levels. Confectionery stores reported the largest decrease from 1948 and combination stores the smallest. The same two trades respectively had the greatest and smallest ratios of net profit - $7.5 \%$ for confectionory stores and $4.1 \%$ for combination stores.

Gross profits in 1950 increased from the 1948 level in grocery and combination stores, remained constant for fruit and vegetable stores, and decreased in meat markets and confectionery stores. Confectionery stores operated on the highest ratio of gross and net profit but low average sales actually reduced these to the lowest dollar profits of the five food trades surveyed.

Average Inventories and Stock Turnover 1938, 1941, 1944, 1945, 1946, 1948, 1950

| Year | Grocery |  |  | Combination |  |  | Meat |  |  |

| 1948 .......... | 1,682 |  | 1,868 |  | . 2 | 1,410 |  | 487 | 12.1 |
| 1950 ......... | 1,912 |  | 2,152 |  | 8. 8 | 1. 771 |  | 948 | 11.3 |

1. Times per year.

Three trades-grocery, fruit and vegetable, and confectionery-stocked a greater dollar volume of merchandise at both the beginning and end of 1950 than at the corresponding dates of 1948. The rate of stock turnover was slower in fruit and vegetable and in confectionery stores than in 1948, a continuation of a downward trend which has been in evidence since 1945 in these trades.

Meat markets, handling a more perishable type of merchandise, had the fastest stock turnover rate.

The 1950 rate of 43.4 times a year exceeded the rates of prevlous years. Grocery stores, with the most stable line of goods of the five trades, experienced the slowest rate of turnover. Their stock was sold and replaced 10.9 times in the year, or on an average of approximately once every 33 days. The average inventory figures represent dollar volume and any increase does not necessarily reflect a quantity increase,

COMPARISON OF OPERATING RESULTS

Average Operating Expenses 1950 (Percent of net sales)

| Expense Item | Grocery | Combination | Meat | Fruit \& vegetable | Confectionery |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Stlaries (ex, delivery) | 3.72 | 5.26 | 5. 13 | 4. 12 | 3.91 |
| Occupancy ............................................................ | 2.82 | 2.61 | 2.69 | 3.82 | 4.98 |
| Detivery .............................................................. | 1.02 | 1. 25 | 1. 24 | 1.53 | . 18 |
| Store Supplies ....................................................... | . 55 | . 61 | . 79 | 1.11 | . 48 |
| All other ....................... | 1. 15 | 1. 10 | 1. 21 | 1. 00 | 1. 14 |
| Total operating expenses | 9. 26 | 10.83 | 11.06 | 11. 58 | 10.69 |

Salaries paid to employees was the largest single item of expense in all food stores except confectionery stores. Occupancy ranked second in importance among expense items except in confectionery stores where it was first. Combination stores paid a higher share of revenue as salaries and wages ( $5.26 \%$ of sales) than the other trades, and the percentage ranged downward from that figure to a low of $3.72 \%$ in grocery stores. Comb-
ination stores realized more sales per occupancy dollar than did other food stores. Occupancy here includes taxes, insurance, rent for rented premises, heat, light and power, repairs and maintenance and depreciation.

Total operating expenses ranged from $9.26 \%$ of net sales for grocery stores to $11.58 \%$ for fruit and vegetable stores.

## FINANCIAL STRUCTURE

Certain balance sheet items and ratios presented in this report are not comparable with those published for 1948 for the following reasons.

1. Government bonds and securities which have a readily realizable market value have been specified on the 1950 form as an item of current assets. In 1948, assets of this nature may have been reported in "other assets". This itemizing of Govermment bonds and securities has no doubt increased the "current asset" total.
2. Fixed assets used in the business have been separated from those not used in the business. Fixed liabilities-mortgages against the fixed assets-have also been separated to correspond. In the ratio of sal es to fixed assets published in 1948, total assets were used. This 1950 bulletin shows the proper ratio of sales to fixed assets used in the business.

The ratios summarized below represent the average of the firms reporting in the over $\$ 20,000$ sales groups, and not the over-all trade average.

Balance Sheet Ratios of Food Stores Compared as at December 31, 1950

| Item | Grocery <br> stores | Combina- <br> tion <br> stores | Meat <br> markets | Fruit and <br> vegetable <br> stores | Confea- <br> tionery <br> stares |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |

Current assets to current liabilities
Current assests to fixed assets. $\qquad$
Net quick assets to net worth
(Average of firms with net sales of $\$ 20,000$ and over)

Sales to fixed assets used in the business.
Liabilities to net worth. $\qquad$

|  |  | wned |  |  |
| :---: | :---: | :---: | :---: | :---: |
| 2. 88 | 2.40 | 2.04 | 4. 12 | 2. 34 |
| 1.01 | . 92 | . 59 | . 50 | . 76 |
| . 44 | . 40 | . 26 | . 31 | . 35 |
| 7.65 | 8.42 | 7.37 | 5. 81 | 6. 36 |
| . 36 | . 48 | . 45 | . 22 | . 51 |
| Rented |  |  |  |  |
| 2.94 | 2.33 | 1.94 | 2.48 | 3.37 |
| 2.79 | 1. 84 | 1.64 | 1.21 | 2.35 |
| . 67 | . 53 | . 46 | . 43 | . 60 |
| 31. 75 | 25. 24 | 25. 34 | 25.84 | 23.31 |
| . 45 | . 53 | . 63 | . 39 | . 31 |

All trades had a favourable balance of current assets over current liabilities. Meat markets in the rented class were slightly below the recognized standard of 2 at 1.94. Owned fruit and vegetable stores showed $\$ 4.12$ current assets for every $\$ 1.00$ of current obligation.

Proprietors of grocery stores had the highest ratio of net quick assets to net worth in occupancy categories. After allowing for current liabilities, the owner-proprietor had $44 \%$ of his net worth in the form of quick assets, the lessee-merchant $67 \%$

Fixed assets of combination stores in owned premises produced more sales than in the other food trades. Every $\$ 1.00$ of store fired assets in owned
combination tores with over $\$ 20,000$ net sales produced $\$ 8.42$ sales. In the rented class, where the fixed assets comprise fumiture, fixtures and equipment but no land or buildings, the ratios were naturally much greater. Here, grocery stores were highest with $\$ 31.75$ sal es for every $\$ 1.00$ of fixed assets used in the business, and confectionery stores were lowest with a ratio of $\$ 23.31$ to $\$ 1.00$.

The ratio of liabilities to net worth was under .50 for most categories. The proprietor of the average "rented" meat market had .63 cents liabilitios for every $\$ 1.00$ net worth while the "owned" fruit and vegetable store proprietor who had the highest current ratio also had the least liabilities in relation to net worth 0.22 cents to $\$ 1.00$.

## COMPARISON OF FINANCIAL STRUCTURE BY TRADES AVERAGE FINANCIAL POSITION DECEMBER 3I,1950

TOTAL ASSETS = TOTAL LIABILITIES + NET WORTH

## GROCERY STORES

This classification includes stores commonly known as grocery stores. Ftesh meats were handled by some, but where this item represented more than $20 \%$ of sales, the store was classified as a combination store. After careful editing of the forms returned, it was possible to use 1,044 reports from independent unincorporated firms in the tabulation of profit and loss data Summary results distinguish those of owned and rented premises, and there is a futher division according to sales-size groups.

Balance sheet resuls were tabulated for the sales-size groups over $\$ 20,000$ and a further breakdown was possible by "age" of business. Returns from 617 firms were used to obtain the balance sheet results contalned in this part of the bulletin.

Features of the operating results and of the financial position of grocery stores at December 31, 1950 are summarized below:

## Operating Results

Gross profit was little changed from previous y ears.

But operating expenses increased from $8.32 \%$ of net sales in 1948 to $9.26 \%$ in 1950 .

This reduced net profit from $5.65 \%$ in 1948 to $5.18 \%$ in 1950.

Increase of the proportion spent on salaries accounted for half the rise in total expenses.

Gross and net profit ratios were higher in the smaller stores and decreased in the larger sizes.

The dollar volume of stock was greater at the end of the year than at the beginning.

The rate of stock turnover ranged from 4.19 times a year in small stores to 14.24 times in the largest.

The average owner-proprietor had $\$ 2.88$ current assets for every $\$ 1.00$ current liabilities and the lessee-merchant \$2,94.

Business in operation 10 years or more were generally in better financial positions than those with less than 10 years experience.

Other averages, percentage and ratios may be obtained from the tables in the following pages.

## COMBINATION STORES

Stores selling both groceries and meats are classed as combination stores whenever the smaller of the two commodities forms not less than $20 \%$ of total sales. Profit and loss statements from 821 such stores were used to produce the average results which are presented by sales-size and occupancy groups. There were to few with sales under $\$ 10,000$ to warrant publication of results. Balance sheet
information, supplied by 560 firms, was tabulated only for those with annual net sales of $\$ 20,000$ and over. Tabulations were made on an age, size and occupancy basis.

Summary points on the 1950 operations of combination stores and their financial position at the end of the year are given below.

## Operating Results

The average gross profit in 1950 , at $14.88 \%$ of net sales, was slightly higher than in 1948.

Operating expenses, higher than in other recent years, offset the gain in gross profit to leave 4i: smaller average net profit than in 1948 .

In 1950 , net profits ranged from $7.10 \%$ of sales in the smaller size-groups to $3.50 \%$ in the larger stores.

Stock was sold and replaced 8.50 times a year or once every 43 days in the smallest sales-size class and 15.01 times or approximately once every 24 days in the largest group.

The owner-proprietor of the average store with over $\$ 20,000$ annual sales had $\$ 2.40$ current assets at the end of 1950 for every $\$ 1.00$ of current obligation. Lessee-merchants had a current ratio of 2.33 .

1. See definitions on page 4 for more detall.

## MEAT MARKETS

Stores in this classification are those selling fresh meats with related lines of poultry, fish and dairy products. If groceries form more than $20 \%$ of net sales, the business is classified as a combination store,

Reports suitable fortabulation of profít and loss data were recelved from 314 stores. The results are shown by sales-size groups with too few reporting in the class "under $\$ 10,000$ " to permit publication of the results. A distinction is also made between
stores operated from owned premises and those from rented premises. Balance sheet data were tabulated only for stores with annual net sales of $\$ 20,000$ or more. Reports suitable for this purpose were received from 194 meat markets and results are shown by type of occupancy and sales-size.

Some of the more important features in the 1950 operations of independent meat markets and their financial structure at the end of the year were as follows

## Operating Results

Little change took place in the main 1950 operating ratios of meat markets as compared with 1948.

A greater dollar volume of merchandise was in stock at the end of 1950 than at the beginning of the year.

The rate of stock turnover ranged from'16.44 times a year in the smallest size stores to 53.41 times in the largest.

The current ratio-current assets to current liabilities stood at 204 for the proprietor who owned his premises and at 1.94 for the merchant operating from leased premises.

Every $\$ 1.00$ invested in fixed assets produced $\$ 7.37$ sales for the "owned" operator and $\$ 25.34$ sales for the merchant who operated from rented premises

## FRUIT AND VEGETABLE STORES

These stores specialize in the sale of fresh fruits and vegetables. While other commodities such as groceries, tobacco and confectionery may be handled, they must form less than $50 \%$ of total sales for the business to remain in this classification. After careful editing, 183 reports were found suitable for tabulation of pront and loss data. Results are presented for three sales-size classes within the
range of $\$ 10,000$ to $\$ 99,999$ for both the owned and rented type of occupancy.

Balance sheet information was tabulated for two size classes in each occupancy group for which 96 returns were used.

Summary points on the 1950 operations of fruit and vegetable stores and their financial position at December 31, 1950 are given below:

## Operating Results

Average gross profit at $17.48 \%$ of net sales changed little from the $17.51 \%$ obtained in 1948.

Operating expenses increased from $11.01 \%$ in 1948 to $11.58 \%$ in 1950.

This produced a smaller net profit in 1950 amounting to $5.90 \%$ of net sales.

Following the general pattern of other trades, gross and net profit percentages decreased as the size of business increased.

Stock was sold and replaced more often in the larger stores than in the smaller and the rate of turnover ranged from 21.13 times a year to 13.18 times.

The owner-proprietor had $\$ 4.12$ current assets at the end of the year for every $\$ 1.00$ of current liabilities while the lesseemerchant had $\$ 2,48$.

## CONFECTIONERY STORES

Stores in this classification are those in which candy and confectionery, soft drinks, tobacco, ice cream, fruits, newspapers and magazines are sold Light lunches often form a part of the business but must not exceed 50 per cent of total sales.

A total of 278 reports were used in the tabulation of profit and loss results for 1950. This tabulation was made on a sales-size and occupancy

The average gross profit of confectionery stores in 1950 was lower in percentage to sales at $18.21 \%$ than the $19.09 \%$ obtained in $=948$.

Slightly higher operating expenses in 1950 left a net profit of $7.52 \%$ somewhat lower than the 1948 average net profit of $8.50 \%$ of net sales.

Gross and net profit ratios decreased consiatently as sales volume increased in 1950, gross profits ranging between $22.68 \%$ and $14.06 \%$ of net seies over the different size groups and net profits from $9.43 \%$ to $3.63 \%$ of net sales.
basis. Balance sheet data were tabulated for stores with sales of $\$ 20,000$ and over for which satisfactory reports were received from 210 stores. There were no reports received from stores in the $\$ 100,000$ -and-over size class in this trade.

Summary points in the 1950 operations and the financial structure at the end of the year of confectionery stores are listed below:

The rate of stock turnovel ranged between 7.12 times a year in the smallest sales-size class and 15. 28 times in the largest.

Both the owner and lessee merchant had favourable ratios of current assets to current liabilities2.44 to 1 and 2.91 to 1 respectively.

The owner-merchant realized $\$ 4.83$ sales in the year for every $\$ 1.00$ invested in fixed assets used in the business. The proprietor who ouerated from rented premises, having no real estate investment. realized $\$ 23.58$ sales for every $\$ 1.00$ of fixed store assets.
