The Right Honourable C. D. Howe, Minister of Trade and Commerce

## DOMINION BUREAU OF STATISTICS

Industry and Merchandising Division
Merchandising and Services Section

## NOTICE

The annual reports prepared by the Industry and Merchandising Division of the Bureau of statistics are divided into 3 volumes, as follows: Volume 1 - The Primary Industries, including mining, forestry and fisheries; V olume II - Manufacturing; Volume III Merchandising and Services.

Volume 111 consists of the following parts with individual trade reports listed under each:

## Part I - Wholesale statistics

A - Wholesale Trade, 25¢
*B - Operating Results of Fond Wholesalers, $25 \$$

- C - Operating Results of Dry goods, Plece Goods, and Footwear Wholesalers, $25 \$$
*D - Operating Results of Miscellaneous Wholesalers, (Automotive parts and accessories, drugs, hardware, plumbing and heating equipment), 25 d

## Part II - Retail Statistics

E-General Review, 25c
F - Retail Trade, $50 \$$
G - Retail Chain Stores, $50 \$$

* H Operating Results of Chain Food Stores, 25\$
- I - Operating Results of Chain Clothing Stores, $25 \$$
* J - Operating Results of Miscellineous Chain Stores (variety, drug, furniture), $25 \$$
K - Operating Results of Retail Food Stores, $25 \$$
L - Operating Results of Retail Clothing Stores, 25
M - Operating Results of Retail Hardware, Furniture, Appliance und Radio Stores, $25 \$$
N - Operating Results of Filling Stations and Garages, 25
O - Operating Results of Miscellaneous Retail Stores, 25 \$
P - Retail Consumer Credit, $25 థ$

## Part III - Service and Special Fields

Q - Laundries, Cleaners and Dyers, 25 ¢
R - Motion Picture Theatres, Exhibitors and Distributors, $25 \$$
S - Hotels, 25
T - Sules Financing, 25¢
U - Farm Implement and Equipment Sales, 25\$
V - New Motor Vehicle Sales and Motor Vehicle Financing, $25 \$$
W - Advertising Agencies (Memorandum), $25 \$$
X - Motion Picture Production (Memorandum), 10 \$

The reports are punched to permit of filing in a ring binder.

- Biennial reports - not issued for 1952 ,

## DEFINITIONS

## Profit and Loss

Net sales - the dollar volume of business done. Allowances and discounts granted to customers and value of goods returned by customers are deducted from gross sales, but sales of meals or lunches provided employees and any goods withdrawn by the proprietor for personal use are included.

Cost of goods sold - determined by adding the beginning inventory to net purchases and deducting the ending inventory.

Gross profit - the difference between "cost of goods sold" and "net sales".
Operating expenses - all cost incurred in the year's operation of a business, except the cost of merchandise. These include:

Salaries and wages (except delivery) - payments to employees before deduction of income tax or unemployment insurance. Proprietors' salaries or withdrawals are included in 'net operating profit" (in unincorporated store operations).

Taxes - business, property and water taxes. Taxes collected for remittance to governmental bodies and income tax are not included.

Insurance - annual proportion of premiums for insurance policies carried to protect the business.

Rent-Payments for use of business premises.
Heat, light and power - cost applicable to year's operations.
Delivery - includes salaries paid to delivery men, truck repairs and maintenance, depreciation, licenses and insurance on delivery equipment and supplies used in connection with delivery (gas, oil, etc.).

Repairs and maintenance - costs incurred to keep fixed store assets operating efficlently (excludes capital expenditure).

Depreciation allowances - provision for decrease in the value of fixed store assets.
Store supplies - wrapping paper, office supplies, etc.
Advertising - displays, window dressing and sales promotion.
Net bad debt loss - estimated amount of uncollectable customers' accounts receivable less the amount recovered from former bad debts.

Other expenses - telephone, telegraph, postage, bank charges, legal, auditing and collection fees, etc.

Net operating profit - is the difference between "total operating expenses" and "gross proft" and includes proprietors' salaries and withdrawals before income tax deductions.

Occupancy - the cost of maintaining and occupying a place of business and includes: rent, business and property taxes, insurance, heat, light and power, repairs and maintenance and depreciation.

## DEFINITIONS

Balance Sheet

## Assets

Cash on hand or in bank - the amount of cash in the business at the end of the year.
Net accounts receivable - all customers' notes and accounts owing to the business at the end of the year less any reserve for doubtful accounts.

Merchandise inventory - the cost value of merchandise on hand for resale but does not include store supplies on hand.

Other current assets - includes assets which may be converted into cash, if necessary within a reasonably short time, such as Dominion of Canada Bonds and prepaid insurance.

Fixed assets (net) - the book value of land, buildings, furniture, fixtures and equipment less any reserves for depreciation. Separate figures are shown for assets used in the business and those not used in the business.

Other assets - investments of a permanent nature not readily converted into cash and intangibles such as goodwill and organization costs.

## Liabilities and Net Horth

Current liabilities - are obligations which must be paid in the near future and represent accounts payable or any item that may be considered as a direct lien against current assets.

Fixed liabilities - mortgages secured by fixed assets and separated, as are fixed assets, between those used and not used in business.

Other liabilities - long term notes payable, accrued expenses such as taxes due but not yet paid, and prepaid or deferred income.

Net worth - Unincorporated business - the amount invested in the business together with any accumulated profits after proprietor's or partners' withdrawls.

Incorporated business - net worth is shown in two parts: (1) Capital stock, which represents the shareholders' investment of fully paid-up subscribed shares, and (2) Surplus, which represents distributable surplus, capital surplus and earned surplus.

## DEFINITIONS

## Profit and Loss Statement Ratios

Stock Turnover - the number of times in a year that the average merchandise inventory is sold and replaced. The average of the beginning and ending inventories is divided into the cost of goods sold.

Note: Each of the following ratios are expressed as a percentage of "net sales". Consequently, it is permissible to make direct comparisons between these ratios, Each ratio represents a portion of the average net sales' dollar.

Gross Profit Ratio - sometimes referred to as the "gross margin ratio" or "mark-up" represents the difference between "cost of goods sold" and "net sales". It is the portion of the average sales" dollar from which the merchant meets his operating expenses and obtains his net operating profit.

Operating Expense Ratios - Each item of expense, as well as "total operating expenses" when expressed as percentage of "net sales" shows the amounts of the average sales' dollar required to operate the average business.

Net Operating Profit Ratio - the remaining proportion of the average sales' dollar after "cost of goods sold" and "total operating expenses" have been deducted. From this amount, the percentage allowance for both proprietors' salaries and income tax should be deducted in order to determine the percentage to sales of net returns on capital investment.

## Balance Sheet Ratios

Current Ratio - Current Assets $\div$ Current Liabilities - indicates to what extent the business is able to meet its current obligations out of "current assets". Care should be taken to examine the components of current assets because overstocking of inventories and overinvestment in credit sales (accounts receivables) can result in a strong or more favourable ratio.

Liquidity Ratio - Cash + Accounts Receivable + Government Bonds and Securities $\div$ Current Liabilities - sometimes referred to as the "acid test", is similar to the "current ratio" as a test of current credit strength. A ratio of $100 \%$ (or 1) is usually considered favourable.

Working Capital to Net Worth Ratio - denotes the relationship between "working capital" (current assets less current liabilities) and a proprietor's equity in the business. That is, the proportion of "net worth" that cculd be realized readily if liquidation were necessary.

Worth-Debt Ratio - Net Worth - Total Liabilities - If used in conjunction with the "current ratio", would reflect any weakening of the capital structure of a business through large loans which give a high "current ratio".

## Interstatement Ratio

Turnover of Total Capital Employed - Net Sales $\div$ Total Assets used in the business - provides an indication of the degree of management efficiency. However, this ratio should not be used alone because "profits" and not "sales" are the major criterion of efficiency.

# OPERATING RESULTS AND FINANCIAL STRUCTURE RETAIL HARDWARE, FURNITURE, APPLIANCE AND RADIO STORES 

## INTRODUCTION

The ratios appearing in the operating results bulletins may not constitute an ideal pattern of operations which all retallers should set as a goal, but they do represent a standard by which the retailer may ascertain whether or not his operations are being conducted as effectively, economically and profitably as those of the trade in general. To the merchant whose profits are below average, the operating results summaries may help to disclose the reasons which account for this situation. Reflection and consideration on the part of the merchant make it possible to decide whether his operating methods should be altered or whether the situation is normal in the light of conditions peculiar to the location of his business.

There is growing evidence that independent retail merchants are making more advantageous use of the results shown in the biennial operating results bulletins issued by the Dominion Bureau of Statistics. Many accounting firms whose clientele includes retail merchants have shown much interest in these series.

A number of trade papers and business period icals have reproduced and interpreted the results of previous studies with the object of illustrating to retail merchants the manner in which operating results can be used as a tool in store management. This is a practice the Bureau is pleased to encourage, since it meets with one of the most important objects in maintaining this series, namely the promotion of improved merchandising on the part of retailers.

Statistics derived from other sources have shown that the mortality rate of business is much higher among new entrants into the field of retailing than among those established for five years or more. There are many reasons for this, some of them associated with the natural incompetence of the initiate retailer which could not be completely overcome by means of operating statement analysis, It seems reasonable to suppose, however, that failure in many
cases is the result if inadequate knowledge on the part of new proprietors of the true fiscal requirements involved in operating a business and the proper allocation of costs. Where capital is limited, as is often the case in a newly-established store, it would seem that most careful attention should be given to maintenance of proper records and that provision be made to check against some such standard performance as these publications provide.

The following kinds of retail business are presented in this report:

1. Hardware (both incorporated and unincorporated)
2. Furniture (unincorporated only)
3. Appliance and Radio (unincorporated only)

There are analyses of:

1. profit and loss statements
2. balance sheets

Profit and loss data are shown for owned and rented stores separately, and for various sales-size categories.

Balance sheet data, which was introduced in 1948, is continued in this 1952 study. This information is presented by sales-size and kind of occupancy groups for stores with $\$ 20,000$ or more annual net sales. Where possible, a further differentiation has been made between businesses in operation less than 10 years and 10 years or more. An important change, introduced in 1950, is the segregation of fixed assets and fixed liabilities between those used in the business and those not used in the business. This makes possible a better relationship between assets used in the business and sales than was possible when all fixed assets of the proprietor were reported as one item.

This year, definitions of the ratios presented in this bulletin, for comparison and financial statement aralysis, are shown on the opposite page.

## INDEPENDENT HARDWARE STORES

This classification includes stores recognized by the trade as independent hardware stores. The term "independent" is used to mean non-chain or single establishment firms. After careful editing of questionnaires returned, it was possible to use results submitted by 417 independent unincorporated and 83 independent incorporated firms. Results of hardware stores operated in owned or rented premises are shown separately. A further differentiation
is made within each of these categories to present results within typical sales-size categories.

Balance sheet results are shown, in the form of averages, for both owned and rented categories of unincorporated and incorporated firms. There was a sufficient number of unincorporated stores reporting in both the owned and rented categories to permit the separate presentation of balance sheet averages of firms in business "under 10 years" and " 10 years and over".

## Operating Results

Although identical firm results are not used, a reasonable year-to-year comparison of operating results may be made. Because profits and expenses for each year are expressed as percentages of their respective sales, it is necessary to take into account the change in sales to make a significant interpretation of changes in ratios. As an example, if average sales increased 10 per cent from $\$ 50,000$ in 1950 to $\$ 55,000$ in 1952, and rent showed a proportionate increase from $\$ 600$ to $\$ 660$, the rent expense ratio would be identical for both years. However, if rent remained unchanged, or increased less than 10 per cent, the rent expense ratio would decline.

In 1952 the average gross profit, expressed as a percentage of average net sales, increased only slightly for both unincorporated and incorporated firms, when compared to 1950 results. Total operating expense ratios for unincorporated stores also increased by approximately the same amount, resulting in a net operating profitratio of 10.45 per cent for 1952 operations compared to 10.44 per cent for 1950. Therefore unincorporated firms netted almost the same proportion of the average sales' dollar for both
years, but because average net sales (or the number of average sales' dollars) were greater in 1952, these firms actually realized a greater dollar profit from their 1952 operations. The total operating expenses ratio of incorporated stores increased from 23.38 per cent in 1950 to 24.55 per cent of net sales in 1952. Because there was only a slight increase in the gross profit ratio for these firms, the general increase in operating expenses was reflected in a lower net operating profit ratio of 2.79 per cent for 1952 compared to 3.64 per cent for 1950 . In addition, average sales showed a decline for incorporated firms. Consequently these firms realized a smaller profit in 1952 than is indicated by direct ratio comparison.

Inventories averaged slightly higher in value at the end of 1952 than at the beginning of the year for both unincorporated and incorporated firms.

The annual average rate of stock turnover ranged from 1.46 in the smaller stores to 2.93 for firms in the largest sales-size category.

Operating Hesults of Independent Hardware Stores 1950 and 1952 Compared

TABLE 5. Independent Hardware Stores - Financial structure of incomporated Stores by Size and Occupancy as at December 31, 1952

## INDEPENDENT FURNITURE STORES

This classification includes stores recognized by the trade as independent furniture stores. The term "independent" is used to mean non-chain or single establishment firms. The results presented for this trade are for unincorporated stores only. Although some of the respondents incorporated since the survey of 1950 operations, there was an insufficient number to permit presentation of incorporated store results. After careful editing of the questionnaires returned, it was possible to use 119 reports of unincorporated independent furniture stores for profit and loss tabulations. Of these, 62 conducted
business in owned premises and 57 in rented premises for which separate tabulations are shown. A further differentiation was made within each of these categories to show results of firms within typical sales-size ranges.

Balance sheet results are shown, in the form of averages, for both owned and rented categories, but only for those firms in the annual sales-size groups commencing at $\$ 20,000$. Returns from 100 stores, comprised at 55 owned and 45 rented, were used to obtain the balance sheet averages of furniture stores.

## Operating Results

Although identical firm results are not used, a reasonable year-to-year comparison of operating results may be made. Because profits and expenses for each year are expressed as percentages of their respective sales, it is necessary to take into account the change in sales to make a significant interpretation of changes in ratios. As an example, if average sales increased 10 per cent from $\$ 50,000$ in 1950 to $\$ 55,000$ in 1952, and rent showed a proportionate increase from $\$ 600$ to $\$ 660$, the rent expense ratio would be identical for both years. However, if rent remained unchanged, or increased less than 10 per cent, the rent expense ratio would decline.

The average gross profit, expressed as a percentage of average net sales, increased slightly from 27.05 per cent in 1950 to 27.75 per cent in 1952. Operating expenses, in total, showed a larger increase from 18.35 per cent to $19-47$ for the respective years' operations. This increase was not general however; slight declines occurred in occupancy expense, store supplies and advertising. The fact that total operating expenses increased to a greater extent than did the gross profit, caused a slight decline from 8.70 per cent in 1950 to 8.28 per cent in 1952 in the net operating profit ratios. However, average annual net sales were greater in 1952

Therefore, mlthough the net operating profit formed a smaller portion of the average sales' dollar, It does not necessarlly mean that furniture stores realized a smaller profit, because the average net sales (or the number of sales' dollars) increased.

Generally, inventorios wore alightly higher in value at the end of 1052 than at the beginning of the year.

The annual rate of stock turnover ranged from 1.96 in the smaller stores to 2.92 for stores in the largest seles-size category.

## INDEPENDENT HOUSEHOLD APPLIANCE AND RADIO STORES

This classification includes stores recognized by the trade as independent household appliance and radio stores. The term "independent" is used to mean non-chain or single establishment firms. The results presented for this trade are for unincorporated stores only. Although some of the respondents incorporated since the survey of 1950 operations, there was an insufficient number to permit presentation of incorporated store results. After careful editing of the questionnaires returned, it was possible to use 81 reports of unincorporated household appliance and radio stores for profit and loss tabulations. Of these, 35 conducted business in owned pre-
mises and 46 in rented premises for which separate results are shown. A further differentiation was made within each of these categories to show results of firms within typical sales-size ranges.

Balance sheet results are shown, in the form of averages, for both owned and rented categories, but only for those firms in the annual sales-size groups commencing at $\$ 20,000$. Returns from 76 stores, comprised of 32 owned and 44 rented, were used to obtain the balance sheet averages of household appliance and radio stores.

## Operating Results

Although identical firm results are not used, a reasonable year-to-year comparison of operating results may be made. Because profits and expenses for each year are expressed as percentages of their respective sales, it is necessary to take into account the change in sales to rake a significant interpretation of changes in ratios. As an example, if average sales increased 10 per cent from $\$ 50,000$ in 1950 to $\$ 55,000$ in 1952 , and rent showed a proportionate increase from $\$ 600$ to $\$ 660$, the rent expense ratio would be identical for both years. However, if rent remained unchanged, or increased less than 10 per cent, the rent expense ratio would deciine.

The average gross profit, expressed as a percentage of average net sales, declined slightly from 27.84 per cent in 1950 to 26.36 per cent in 1952. Conversely, the total operating expenses ratio increased from 17.82 per cent to 18.59 per cent for the respective years' operations. This condition was not general however; slight declines occurred in occu-
pancy and store supplies expense ratios. The combined effect of a lower gross profit ratio, or "markup", and a higher total expense ratio resulted in a significant decline in the net operating profit ratio from 10.02 per cent to 7.77 per cent for 1950 and 1952 respectively. However, average net sales of the reporting stores were significantly higher in 1952 Therefore, although the net operating profit formed a smalier portion of the 1952 average net sales' dollar, household appliance and ratio store proprietors were not in the unfavourable position indicated by direct ratio comparison, because the average net sales (or the number of sales' dollars) increased.

Generally, inventories were of slightly higher value at the end of 1952 than at the beginning of the y ear.

The annual rate of stock turnover ranged from 1.84 in the smaller stores to 5.77 for stores in the largest sales-size category.
