# OPERATING RESULTS OF DRY GOODS AND PIECE GOODS WHOLESALERS, 1947 

## Content of the Bulletin

This publication contains the results of survey on the operam tions of wholesalers in the dry goods. piece goods, and shoe trades. A similar study was made by the Dominion Bureau of Statistios on wholesalers in general line dry goods and specialty line dry goods in 1938. No previous survey into operating costs of shoe wholesalers has been made by the Bureau.

Other bulletins in the 1947 wholesale operations series will cover the following trades: groceries, fruits and vegetables, tobacco and confectionery, automotive accessories, drugs, hardware, heating and plumbing equipment.

Purpose of the Survey

The costs of distribution, and the allocation of these costs has become the focus of attention of merchants, the general public and government in recent years. While distribution expenses are by no means confined to middlemen and retailers, the approach to the problem of assessing these costs must be made through these types of business organization. The Bureau has carried on extensive studies into the operating expenses of independent retailers, first for the year 1938, and again for 2944, 1945 and 1946.

As result of requests from the trade, from individuals and from trade associations, it became apparent that the remaining distributive agencies should be surveyed for operating costs. The result has been studies on the operations of retail chains and wholesalers proper covering the year 1947.

What is Distribution?

The three major channels of distribution $-\infty$ independent retail firms, chain store firms and wholesalers -a leave untouched much of the field of distribution costs.

The conversion of goods from raw materials to finished products, and the placing of commoditios before consumers involves the processes of production and distribution. The distinction between the two terms as made by economics sesms quite clear cut. Production involves the addition of physical or form utilities to goods, by means of such acts as processing, fabrication, and transforion. Distributions on the other hand, involves the addition of time and place utilities to goods, by such means as trans= portation, storege, merchandising, display, advertising, expenses of carrying stocks (spoilage, shrinkage), losses from bad debts and financing.

It becomes evident from the consideration of this distinction that distribution costs are not limited to the handling of finished consumers' goods, and that a large part of such expense is borne by primary producers and manufacturers during the early stages of fabrioation or processing of commodities. The transportation of raw materials, expenses of storage while awaiting processing, financing of inventories, are all distribution costs incurred before the endeproduct is ready for the ultimate consumer.

While the producer and processor assume some of the costs of distribution, the retailer and wholesaler may take on certain productive functions. Tholesalers may package and repack commodities while certain retailers such as clothiers finish off semiaready garments or make alterations on finished clothing.

Although the distinction between production and distribution is a useful one, and serves to soparate major functions, there are costs which are not clearly one or the other. Some of these difficult to allocate aro insurance, financing, taxes, service department oosts, and executive selaries. The list is not exhaustive, but where it is im= possible to make a clear-out division of functions, costs are often apportioned on a pro- $\bar{a}$ ata basis, deoided upon by the relative expense ratios of more easily allocated functions, such as selling salaries, store occupancy expense, advertising etc.

Distribution costs, therefore, are not limited to middlemen or retallers but are a part of the interlocking distributionoproduction system which prepares finishod goods and places them before the consumer. The practical distinction betiveen distributive and production is made, however, by dividing industry into units which perform chiefly either the productive or distributiva funotions.

```
Major distributive agencies may be classified as follows:
Wholesalers or the Intermediary trade
    Wholesalers proper
    Manufactures' sales branches or
        offices
    Petroleum bulk tank stations
    Agents and Brokers
    Assemblers of primary products
    Other types of operation
Getailers
    Independent Retailers
    Independent Consumer Co-operatives
Chains - Voluntary chains
        Chains under central ownership
            and Control
                Retail co-operative chains.
```

Felative importanoe of wholesalers proper to total wholessle trale is shown beluw.

```
iholesale Trade - 1941 Census
```

The ten trades surveyed accounted for 35 per cent of the salus of all wholesalers proper in 1941.

In order that the form be desifned in such a way that it could be filled out with a minimum of effort from existing accounting records a sample questionnaire was drawn up and despatched to all known firms in the trades surveyed. An accompanying 1 etter requested that the companies make suggestions which would make the items clear and readily understood throughout the trade. The recomendations received were invaluable in the design of the final form.

A facsimile of the main portion of this final schedule is presented on pages 2 and 3 to help clarify meanings of terms.

## Methods

The ten trades in the survey were selected for their importance in the field of wholesale distribution of consumer goods to retailers. Other trades of considerable wejght were omitted because their sales were made largely to industrial uwr of lumber and buildins materials, chemicals, machinery and equipment, etc. As far as possible the wholesalers canvassed were those performine the functions of warehousing and delivery.

Wholesalers proper may be briefly defined as whol csale establishments buying and selling goods on their own account. From this group those types not actually handling the merchandise on drop shippers and desk jobbers - were omitted.

Wher the reports were received, some could not be used for such reasons as manufacturing activities, partial brokerage or agency business, for which expensos could not be separated from the functions of a warehousing, and delivery wholesaler. Mixture of commodities not typical of the trade and unrelated as to cost of handing eliminated other returns from tabulation. Where the number of reports was sufficient the results were tabulated according to the most suitable sales-sizo range. The salarios of proprietors and partners were included with administrative salaries. Income tax tabulation was made only for incorporated firms.

As with all surveys conducted by the Dominion Bureau of Statistics only ayerage results are shown and all information submitted by the co-operating fifras has been kept in strictest confidence.

## RESULTS OF THE SURVEY.....

All wholesalers proper, as previously defined for inclusion in this survey, were canvassed by mail. Certain returns could not be used as typical and a few firms did not coroperate in submitting reports. The results presented, however, are deemed a good average of the respective trades.

Of the three kinds of business presented in this bulletin, footwear wholesalers were the most speciglized. Piece goods wholesalers included some firms selling small amounts of other conmodities such as clothing and notions, and dry goods wholesalers were those firms selling a general line of dry goods = clothing, notions, piece goods, house furnishings, etc. Of the three, dry goods firms were the largest in avarage size, and effectod a faster rath of stock turnover than the other kinds. Firms dealing in dry goods and footwear sold mainly to the retail trade, while firms selling piace goods oatered more to the noeds of industry than to retailers. In common with most wholesale establishments, the bulk of sales were made on a credit basis, ranging between 96.7 and 98.0 per cent of not sales.

Piece goods wholesalers obtained the highest gross and net profits with dealers of footwear recording the lowest in each case. Firms selling a general line of dry goods to retail stores expended a greater proportion of their gross margin on operating expenses. A comparison of some of the main operating features for the three trades is shown below s

Table l. OPERATING RESULTS OF DRY GOUUS, PIECE GOODS, AND FOOTWEAR WHOLESALERS, 1947

| Item |  | Dry goods | Piece goods | Footwear |

## OPERATING RESULTS OF WHOLESALERS

 OF DRY GOODS, PIECE GOODS, AND FOOTWEAR 1947
(1) INCLUDES OTHER TRADING INCOME AND INCOME TAX.

## DRY GOODS.....

Fifty-three firms in the classification of general line dry goods wholesalers returned satisfactory reports to this survey. These firms were divided into four sales-size groups, for which a certain amount of description is given in the following tables

## GFNERKI, INTORIGTION ON REIYYTHRG EIRES

| Iterı | Annual Not Sales |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\begin{aligned} & \text { Under } \\ & \$ 250,000 \end{aligned}$ | $\begin{gathered} \$ 250.000 \\ \text { to } \\ \$ 999.999 \end{gathered}$ | $\begin{gathered} \$ 1,000,000 \\ \text { to } \\ 32,999,999 \end{gathered}$ | $\$ 3,000,000$ and over | $\begin{gathered} \text { All } \\ \text { sizes } \end{gathered}$ |
| Number of firms | 19 | 14 | 14 | 6 | 53 |
| Incorporated companies | 8 | 8 | 13 | 6 | 35 |
| Single establishments ....... | 19 | 14 | 12 | 5 | 50 |
| Sales distribution to: |  |  |  |  |  |
| Retail stores .............\% | 84.7 | 95.6 | 90.2 | 93.4 | 92.2 |
| Wholesalers \& industry .. \% | 12.1 | 4.3 | 9.7 | 5.9 | 7.2 |
| others . ................. \% | 3.2 | 0.1 | 0.1 | 0.7 | 0.6 |

The small proportion of sales to large users and the small number of multiple organizations did not warrant separate tabulation for these two factors. Summary points in the operations of these firms in 1947 are sot out below.

1. For every $\$ 100$ net sales in 1947 , dry goods wholesalers paid $\$ 83.36$ as cost of goods sold and retained $\$ 16.64$ to moet expenses and allow a net profit on operations. The size class between $\$ 1,000,000$ and $\$ 2,999,999$ realized the largest gross profit and the other three groups were slightly bolow the "all size" average of $\$ 16.64$. Net operatiag profit followod the same trend by size, averaging $\$ 4.51$ out of every $\$ 100$ net sales. Other trading income, in the form of purchase discounts and earned interest added $\$ 1.04$ to this operating profit to make a total net profit before income tax deduction of $\$ 5.55$ (Table 3)
2. No definite trend was shown over the size classes in the main expense functions. Total operating expenses amounted to 12.13 per cent of net sales with administrative and general expenses accounting for half the amount at 6.10 per cont. Selling expense formed 4.39 per cent and warehouse and delivery expense 1.64 per cont of net sales. (Tablo 3).
3. There was a substantial increase in stocks on hand at the end of 1947 as compared to the dollar volume on hand at the beginning of the year due in part at least to the increasing level of trading. The rato of stock turnover - based on the average of the two inventories - ranged from 4.6 times to 7.5 times per year with the largest firms selling and replacing stock the greatest number of times. (Table 3).
4. The largest single item of expense was selling salaries at 3.40 per cent of net sales. Total salaries - selling, warehouse and delivery, and administrative - absorbed 7040 per cent of sales, accounting for 61 per cent of total expenses. These and other items of expense for the four size groups are shown in detail in table 4.
5. Income tax tabulation, made for incorporated companies, showed that income tax paid ranged from 49 per cent of profit (operating profit plus other trading income) in the largest class to 38 per cent in the smallest. Because of the omission of unincorporatad firms from this tabulation, gross and net profit differ slightly from the ratios shown in table 3. (Table 2).

## PIECE GOODS

Sixty-four whelesalers of fiece ronds submitted reports which could be used in this survey. For purpose of tabulation these were divided into four seles-size ranges for which a certain amount of description is given in the following table.

GENERAL INFORMATION ON PEPORTING FIRMS

| Item | Annual Net Sal es |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Under $\$ 200,000$ | $\begin{gathered} \$ 200,000 \\ \text { to } \\ \$ 499,999 \end{gathered}$ | $\begin{gathered} \$ 500,000 \\ \text { to } \\ \$ 999,999 \end{gathered}$ | $\$ 1,000,000$ <br> and over | $\begin{gathered} \text { All } \\ \text { Sizes } \end{gathered}$ |
| Number of firms .... | 20 | 23 | 13 | 8 | 64 |
| Incorporated companies. | 7 | 14 | 11 | 6 | 38 |
| Single establishments .. | 20 | 23 | 11 | 8 | 62 |

| Retail stores ......\% | 43.7 | 43.0 | 42.2 | 31.5 | 38.3 |
| Wholesalers and Industry .......... \% | 54.8 | 56.1 | 56.8 | 68.5 | 61.1 |
| Others ............ \% | 1.5 | 0.9 | 1.0 | - | 0.6 |

The main features of the operations of piece poode wholesalers in 1947 are shown in table 5 while more detail on the profit and loss statement is shown in table 6. Operating expenses of firms solling principally to the retail trade are compared to those whose major sales were made to large users (mainly industry) in table 7. Tabulation for income tax and final net profit for incorporated companies is shown in table 8. Sufficient firms specializing in woollen Fiece goods permitted sejarate tabulation of their results.

Sumary points in the operations of piece goods wholesalers are fivan below.

1. No significant trend in sross profit was evidenced over the four size classes of piece goods wholasalars in 1947. Net profit in the largest size olass was much greater in ratio than in the othar classes. From an average gross profit of $\$ 18.40$ on every 100 sales, expenses of $\$ 10.91$ were paid out to leave a net operating profit of $\$ 7.49$. To this trading, profit other tradinf income of $\$ .71$ gave a profit before income tax deduction of $\$ 8.20$. Table 5.
2. Total operating expenses formed 10.91 per cent of net sales of which selling expenses were 3.93 per cent, warehouse and delivery 1.58 and general and administrative expense 5.40 per cent. There was a general trend toward decreased expense ratios for these major functions in the larger sized firms. The average total expense ratio ranged from 14.92 per cent in the smallest to 9.27 per cent in the largest size class. Table 5。
3. The largest single item of expense was selling selaries at 2.96 per cent of net sales. Administrative salaries were almost as high at 2.62 per cont with warehouse salaries forming 1.15 per cent. Total salaries accounted for 6.73 per cent of net sales or approximately 62 per cent of all expenses. Table 6.
4. Firms whose sales were 50 per cent or more to the retail trade incurred greater selling and warehouse and delivery expense than those whose sales were more than 50 per cent to large users (other wholesalers, industry, institutions, etc.). All sizes registered this increase, reflecting the selling and handling in smaller quantities required in dealing with the retail trade. Table 7.
5. Incorporated firms registered a net profit of 7.17 per cent of sales to which is added other trading income of 0.72 per cent as compared to the "all firm" average of 7.49 per cent profit and 0.71 per cent other trading income. From this profit of 7.89 per cent, $\mathbf{S} 052$ per cent was deducted as income tax to leave a final net profit of 4.37 per cent of net sales. Table 8 .
6. Wholesalers of woollen piece goods obtained greater gross and net profits and operated on a smaller ratio of expenses than did "all piece goods" wholesalers. The lesser expenses may be partly attributed to their sales distribution = 21 per cent to retailers and 79 per cent to industry and other large users, as compared to the average of 38 and 61 per cent respectively. The difference in profits between wholesalers specializing in woollen piece goods and wholesalers of all kinds of piece goods was greatest in the largest size class. In this size group the former realized a total net profit before income tax deduction of 14.47 per cent of net sales as compared to 10.68 per cent for the latter. Table 9.

## FOOTWEAR.....

Operating ratios were basod on adequate reports from twenty-one wholesalers of shoes and other footwear. These firms were divided into three sales-size ranges; under \$200,000 annual net sales, $\$ 200,000$ to $\$ 499,999$ and $\$ 500,000$ and over. Footwear was sold exclusively by the reporting firms and 16 of the 21 sold entirely to the retail trade. The other five sold mainly to retailers with a small percentage going to other wholesalers or industrial users. All firms were single establishments (no branches). The smallest size group included 's corporations, the middle cless 4, and the five firms with sales of over $\$ 500,000$ were all incorporated.

Some of the main features of rootwear wholesalers" operations in 1947 are:

1. Gross profits as parcentage of net sales decreased with sales volume from 14.56 per cent in the smallest class to 11.63 per cent in the largest. Net profit was lowest in the smallest class ( 1.0 per cent) with the largest ifirms at 2.53 per cent and the middle size class 3.39 por cent. (Table 11).
2. Inventorias were greater at the end of the year than at the beginning in all sizes and the rate of stock turnover, based on the average of the beginning and year end inventories, increased with size of business from 4.1 to 5.1 times per year.
3. Salaries paid to salesmen were highest in the largest size class while warehouse and administrative salaries decreased in ratin with sales volume. Out of every $\$ 100$ sales, $\$ 6.58$ were absorbed by salaries and wages. Out of every $\$ 100$ expense money, $\$ 65$ went to salaries and wages. (Table 12).
4. The final net profit of incorporated firms (income tax deducted) is shown below for two size ranges.
